# THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.  
DEPUTY MINISTER—F. A. ACLAND.

Volume 23

JANUARY, 1923

Number 1.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### This issue in brief

This issue of the **LABOUR GAZETTE** contains the regular monthly articles dealing with recent conciliation proceedings, employment conditions as reported by employers and employment offices, strikes, prices, wage agreements, etc., in Canada. It also contains a number of other articles of considerable industrial interest, among which might be mentioned the following: "The Work of the International Labour Office", by Mr. Albert Thomas; "Actions of Various Countries on Draft Conventions and Recommendations of the International Labour Conference"; "Capital and Labour Problems", by Hon. James Murdock; and "Economic Teaching as an Aid to Industrial Peace".

At the beginning of December the percentage of unemployment as reported by trade unions stood at 6.2 as compared with 4.0 at the beginning of November, and with 11.1 at the beginning of December, 1921. The employment situation at the close of November, as indicated by returns tabulated from over 6,600 firms, showed a moderate curtailment of activity, the reductions in employment being confined almost entirely to the construction and transportation industries. The general level of employment, however, continued to be considerably higher than that indicated for the corresponding

period of last year. The offices of the Employment Service of Canada reported a decline in activity during November.

The average cost of the weekly family budget of 29 staple foods was \$10.39 at the beginning of December as compared with \$10.29 at the beginning of November; \$11.00 for December, 1921; \$16.92 for June, 1920 (the highest point reached); and \$7.96 for December, 1914. The total of the combined budget of food, fuel and rent was \$20.97 at the beginning of December as compared with \$20.89 for November; \$21.49 for December, 1921; \$26.92 for July, 1920 (the highest point reached); and \$14.26 for December, 1914. In wholesale prices the index number stood at 223.0 for December as compared with 221.7 for November; 230.7 for December, 1921; 356.6 for May, 1920 (the highest point reached); and 137.6 for December, 1914.

The time loss due to industrial disputes was greater during December than during November, but less than during December, 1921. There were in existence during the month 15 strikes involving about 3,018 workpeople with an estimated time loss of 60,561 working days. The time loss in the previous month amounted to 52,046 working days. Three of the strikes commenced during December. Two of the strikes

commencing in December terminated during the month, leaving 13 strikes involving about 2,365 workpeople on record at the beginning of January.

**Proceedings under the Industrial Disputes Investigation Act.** During December the Department received reports of two Boards of Conciliation and Investigation established to deal with disputes between (1) The

Grand Trunk Railway System and certain of its employees, being clerks, freight handlers, etc., members respectively of the Canadian Brotherhood of Railroad Employees and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; and (2) The Canadian Pacific Railway Company and certain of its employees, being shipmasters, mates and marine engineers, members respectively of the Canadian Navigators' Federation, Pacific Division, and of the National Association of Marine Engineers.

During the month there was received one application for the establishment of a Board, which was subsequently withdrawn.

#### Jottings

A n order-in-council was recently passed by the Dominion Government creating the Dominion Fuel Board, a permanent body authorized "to secure all suitable data, and to consult and co-operate with such individuals or bodies as they may deem specially qualified to advise upon any particular phase of the work." The Board is composed of Messrs. Charles Camsell, Deputy Minister of Mines; John McLeish, director of the Mines Branch; B. F. Haanel, chief of the Fuel Testing Division; D. B. Dowling, geologist; J. B. Challies, director of the Water Power Branch, and F. C. C. Lynch, superintendent of Natural Resources Intelligence Branch.

A bulletin has been issued by the Department of Labour on Rates of

Wages and Hours of Labour in Canada 1921 and 1922, being the fourth report in a series on wages and hours of labour in Canada. The bulletin gives statistics of wages and hours in various cities for building, metal and printing trades and electric railways, and also wages and hours in factories and lumbering, on steam railways and in coal mines, in various localities.

The Technical Education Branch of the Department of Labour has issued the fifth number of its bulletin "Vocational Education." This number contains articles on "Compulsory School Attendance in Ontario," "Compulsory Part-Time School Attendance in the United States," "The Work of the Director of Part-Time Education in California," and "An Experiment in Voluntary Continuation Schools."

The Minister of Mines of British Columbia replying to a question in the legislature on December 16 stated that no Coal Miners' Minimum Wage Board had so far been appointed under the amendment made in 1919 to the Coal Mines Regulation Act of the Province, but that the question of convening the Board was then under consideration. This amendment provided for the establishment of a Board to consist of the chief inspector of mines as chairman, and two other members, representing the mine-owners and coal miners respectively. It came into effect on July 1, 1920, to remain in force for a period of three years only from that date.

It is announced that the Dominion Government has approved plans submitted by the Salvation Army for the settlement in Canada of 25,000 young women, youths and children from the British Isles. The co-operation of the Overseas Settlement Commission of the British Government has been secured by the Salvation Army for this scheme. It is stated that youths who propose to immigrate will be given a short intensive course of education and training on the Army farms in England.

Sixty-six industries employing between 800 and 900 persons are in operation in British Columbia, under loans granted by the British Columbia government to found and stimulate industries, according to the report of the Department of Industries for the last year. To establish the industries the Government has loaned \$1,108,658. Six of the industries thus established have repaid the whole of their loans.

Statistics supplied by the Ontario Mothers' Allowances Commission for the fiscal year from November 1, 1921, to October 31, 1922, show that during that period there were 3,559 beneficiaries with 10,922 children. The beneficiaries included 3,008 widows, 99 wives with husbands in asylums, 274 wives with husbands otherwise permanently and totally incapacitated, 112 wives deserted by their husbands, and 66 foster mothers. The total cost of allowances during the year was \$1,382,138.

On December 28, representatives of the Toronto Building Trades Council waited on members of the Ontario Government, and requested the enactment of a fair wage law along the lines adopted by the Dominion Government in its order-in-council of June 7, 1922.

The Pennsylvania Department of Labour and Industry reports that during the first six months of 1922, the Workmen's Compensation Board of that State received 66,257 claims for compensation. Of these 855 were for fatal injuries, 68 for permanent disabilities and 65,334 for ordinary disabilities. There were 305 cases of loss of eyesight, and the amount awarded for eye losses was twice as great as for any other permanent injury.

A social centre for unemployed boys and girls between the ages of 14 and 18 years was instituted in Manchester, England, in 1921. The centre furnishes education in various subjects and opportunities for recreation. It is conducted in close co-operation with the Juvenile Employment Bureau, and has been able to place many young persons in satisfactory positions.

Press despatches state that the Industrial Court of New South Wales recently fined the New South Wales divisions of the Federated Iron Workers, Assistants and Boilermakers £290 each on the ground that they had participated in an illegal strike.

By a decree of October 12, 1922, employers in Poland who obtain workers through the Public Employment Exchanges are required to pay two hundred Polish marks per worker hired, except when a worker is engaged in order to reduce unemployment, in which case the employer is exempted. No charge is made to workers.

The result of the Economic Essay contest conducted by the Chicago firm of Hart, Schaffner and Marx for 1922, has been announced. In Class A, open to all Americans except under-graduates of any American college, the first prize of \$1,000 was awarded to Norman T. Ware, Ph.D., Professor of Applied Sociology, University of Louisville, Kentucky, formerly instructor, School of Social Work, University of Toronto. The subject of the prize essay was a study entitled "A Defensive Revolt—the Reaction of American Industrial Society toward the Advance of the Industrial Revolution." The second prize of \$500 was awarded to Owen Ely, Ph. M., Manager, Statistical Department, Jelke, Hood and Company, New York City, for a study entitled "Railway Rates and Cost of Service." No prize was awarded Class B, open to under-graduates of American Universities.

Plan to  
extend  
season of  
construction

At a special general meeting of the Montreal Builders' Exchange, which was held on December 15, a committee was appointed composed of Messrs. K. D. Church, president of the Exchange, J. P. Anglin and John Quinlan, to confer as soon as possible with the Board of Trade, the Chamber of Commerce, the Montreal Branch of the Canadian Manufacturers' Association, the Architects' Association, the

Engineering Institute, the City of Montreal, and other bodies with a view to having contracts for as much construction work as possible let early in the year in order that building operations might be carried on more uniformly throughout the year. It was pointed out that if contracts for construction work requiring cut stone were given out in January, employment would be afforded for skilled and unskilled labour at a time when it would give the greatest benefit. The same would apply to the manufacture of doors, sashes, roofing materials, etc. It was also pointed out that if road and sidewalk contracts were given out by the civic authorities in January instead of at varying dates from May to September the work could be begun in April, and before that time many classes of workers could be kept busy preparing the material.

There was also reported a tendency in Toronto to extend the building season, and thus do away with periods of slackness, and at the same time reduce building costs by diminishing activity in the summer months and thus avoiding the necessity of paying bonuses and extra wages for overtime.

**Proposed  
amendments  
to Manitoba  
Workmen's  
Compensation  
Act**

Committees to examine the Workmen's Compensation Act of Manitoba with a view to its amendment at the forthcoming session of the Provincial Le-

gisature were recently appointed by the Labour Party and the Manitoba Employers' Association. The Labour Party committee, will, it is announced, recommend an increase in widows' pensions from the surplus funds accumulated by the Board. The Employers' Committee propose that surplus moneys either be returned to the contributors or be used as a basis for a disaster reserve fund after the sums required for capitalizing compensation awards have been deducted. The em-

ployers also favour the payment of contributions by workmen to the cost of medical aid, similar to the contribution of 1 cent per day per workman provided for under the workmen's compensation acts of British Columbia and Alberta.

A plan to reduce public expenditure by combining the duties of existing Provincial Boards is stated to be under consideration by the Manitoba Government. The Boards affected by the proposed amalgamation would probably be the Manitoba Joint Council of Industry, the Minimum Wage Board, and the Fair Wage Board.

**Accident  
prevention  
plan of  
Canada Cement  
Company**

On June 17, 1921, the management of the plant of the Canada Cement Company at Port Colborne, Ont., began a campaign for the prevention of accidents in the plant. An account by the assistant superintendent of the measures adopted appeared in the *Canadian Manufacturer* for October.

After various schemes were tried without success, a plan was finally worked out, which is claimed to have very materially reduced the number of accidents. An analysis of the causes of the accidents which had recently occurred there showed that only a few could have been prevented by guards, and that the campaign would have to be very largely educational. A suggestion box was installed, and four men were detailed to make guards and do other similar work. The plant was thoroughly inspected and the dangerous places were noted and rectified. It was found, however, that little progress in accident prevention was being made, as the interest of the men had not been aroused. The plant was then divided into sections, each foreman to have a committee of his own and to act as chairman. It was decided to hold a combined safety meeting every week to be attended by all the committees, each

foreman to be at liberty to call a meeting of his own committee at any time. To add interest to the weekly meetings each foreman was asked to visit some other department than his own, and to report on the conditions as to cleanliness and safety that he found. These reports were handed to the assistant superintendent and presented by him to the meetings with the names of the foremen reporting omitted. In the most conspicuous places safety bulletins were posted up, some of these bulletins being supplied by the National Safety Council and some being original ones devised in the plant. The plant is divided into departments, and when a department is free of accidents for a month the head receives a star. When there is no accident for three months he receives one red star, and if six months pass without an accident he receives two red stars, and so on. A penalty system was also introduced whereby each department is penalized for accidents according to the numbers of men, the hazards, etc. The success of the campaign is attributed to the means adopted to keep the employees interested and to arouse their enthusiasm. In addition to the great improvement of the accident record it was also claimed that the production of the plant had increased.

**Proposed Last September a  
Works Committee of British  
Empire Steel Corporation** proposal for the establishment of a Works Committee was made at a conference between the general superintendent of the British Empire Steel Corporation's steel plant at Sydney, N.S., and a committee of employees. It was agreed that the general superintendent and the committee should each draw up plans for the formation of such a council. The plan of the Committee which was subsequently submitted embraced the following terms: (1) A committee of three chosen by the employees in each department; (2) A general committee of one representative of each department; (3) Meetings to be held at the call of either the employees

or the management; (4) The committees to deal with "disputes over wages, hours and other matters that may be mutually agreed upon"; (5) Method of electing all committees to be left entirely in the hands of the employees. In November, the general superintendent called the employees' committee into conference and submitted the company's plan, the chief features of which were as follows: "(1) A General Works Committee of 38 representatives, elected roughly in the proportion of one to each 100 employees; large departments such as the open hearth plant to have several representatives, small departments to unite to bring them up to the required number. (2) A Central Works Committee, of 5 to 7, chosen out of the 38 by themselves. (3) A Committee of five, appointed by the management. (4) A Joint Committee between employees and management, numbering 10 to 12. (5) Meetings of committees to be held on the company time and at company pay, but no pay to be given for outside activities of the 'representatives'. (6) 'Representatives' to be subject to recall by a petition of two-thirds of those entitled to vote in the department which elected him. (7) No discrimination against any 'representative' on account of his action in that capacity. (8) Elections to be held every six months, May and November. All employees over 18 years of age entitled to vote. 'Representatives' must have been one year in the employ of the corporation, and must be 21 years old. Foremen, chief clerks, etc., excluded from employees' elections. The first election would be held in each department under the scrutiny of a representative of the employees and a representative of the corporation; the procedure at subsequent elections would be settled by the Joint Committee. Both plans were rejected, the chief difficulty being in the method of electing the committees. In December a vote of all the employees of the plant was taken on the general question of works

committees with the result that the proposition was rejected.

**Immigration laws and treaties**

The International Labour Office (League of Nations) of Geneva, has issued a volume on Legislation and Treaties respecting Emigration and Immigration (Geneva, 1922. Price, \$1.25). This compilation was made at the request of the International Emigration Commission, a body appointed to consider and report to the International Labour Conference as to measures that could be adopted to regulate the migration of workers and to protect the interests of wage earners residing in countries not their own. The volume was prepared in order to assist in acquiring a thorough knowledge of the conditions concerning migration, and in the elaboration of a uniform legislation. No attempt has been made to draw up a practical guide for the use of the emigrant, but the aim has been to provide the necessary means of work for philanthropists who desire to know the measures of regulation and protection for emigrants, for private societies wishing to find out the countries to which emigration can take place, for legislators and other people engaged in political work. The laws, regulations and treaties are not printed in full, but are classified according to matter. The book is divided into three parts: (1) Legislation concerning emigration; (2) Legislation concerning immigration; and (3) International agreements concerning emigration and immigration.

**International Association for Labour Legislation**

The Tenth meeting of the International Association for Labour Legislation was held at Geneva on October 13 and 14, 1922. The object of this Association, which has national sections in many of the chief countries of the world, is "to serve as a bond of union to those who, in the different industrial countries, believe in the necessity for protective labour legislation." It was

decided that the Association would take up the questions of social insurance of every kind and the protection of workers in countries of immigration. A proposal to convene an international socio-political congress in 1923 was approved, and a committee was appointed to fix the date, place, and agenda of the congress. A report of a committee of the Association on Works Councils was discussed, and it was agreed that, generally speaking, these councils had contributed to the maintenance of industrial peace and had not injured production. In a resolution, the opinion was expressed that this was one of the most important questions in the sphere of social progress and was of the greatest importance not only to the workers but also to the economic system as a whole. The committee was requested to continue its inquiry and to submit another report at the next meeting.

The following officers were elected: Mr. Adrien Lachenal, president; Mr. Greulich, vice-president; Professor Bauer, general secretary, and Mr. Von Blarer, treasurer.

It was decided to hold the next meeting at Basle, Switzerland, in 1923.

**Industrial Negotiations and Agreements.**

A volume has recently been published by the British Trades Union Congress and the Labour Party describing the various methods for the discussion and settlement of differences between employers and their employees that have been adopted in Great Britain by trade unions and employers' associations in the principal industries. ["Industrial Negotiations and Agreements," published by the Trades Union Congress and the Labour Party. Price Two shillings.] The publication discusses legally enforceable agreements, non-enforceable agreements, the present organization of negotiating machinery and inter-union action and sliding scales. There are also contained in appendices a list of joint standing industrial councils with the dates of

their formation, a list of interim industrial reconstruction committees, and a list of other joint bodies, and statistics of the work of voluntary permanent conciliation and arbitration boards. The study is confined to the machinery by which negotiations between trade unions and employers are carried on; the provisions, where they exist, for common action and consultation by trade unions in the same or allied trades; and the extent and duration of collective agreements. Two special types of agreements embodying the sliding scale method of readjusting wages, namely, those based on the cost of living and those based on selling prices, are given special consideration.

**Employees' Benefit Associations**      The result of a survey of employees' mutual benefit associations in the United States conducted by *Bloomfield's Labour Digest* of Boston, Mass., has recently been published. A large number of success-

ful plans are analysed and their various functions, methods and details compared. For purposes of comparison the plans are grouped under three general types: (1) Those administered solely by employees; (2) Those administered jointly by the company and employees; and (3) Those administered solely by the company. It is stated these plans date back to about 1870, and at the close of the nineteenth century organizations of this nature were in most of the big companies of the country. In recent years the mutual benefit idea has been extended to hundreds of new companies and there has been a growth and expansion of these societies. Benefits paid to members may cover any or all of the following features: (1) disability from sickness, accident or quarantine; (2) death by accident or sickness or while on pension; (3) birth of children to members; (4) annuities. Compulsory membership is comparatively rare, but there are associations of all the three types that require all employees to join.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Market, Strikes, Prices

#### The Labour Market

**C**URTAILMENT of operations on a moderate scale was evidenced during November in reports from employers, the losses occurring almost entirely in the construction and transportation industries, the level of employment however continued to be considerably higher than that indicated by the concerns reporting for the corresponding period of 1921. At the beginning of December the percentage of unemployment as reported by trade unions stood at 6.2 as compared with 4.0 at the beginning of November, and with 11.1 at the beginning of December, 1921. The offices of the Employment Service of Canada reported a decline in activity during November, which was in part due to the reactions

from the abnormal expansion in the previous month.

**EMPLOYERS' REPORTS**      Employment as indicated by reports tabulated by the Dominion Bureau of Statistics showed a downward tendency during November, mainly in the out-of-doors industries. The declines however were very much less severe than those reported during the corresponding period of 1921 and the index number stood considerably higher than at that time. An analysis of the returns by provinces shows that the situation in the Maritime Provinces and Quebec was better than in the preceding month, the improvement in the former district being reported chiefly in steel furnaces and in the

latter in water transportation, logging and car manufacturing. In Ontario slight declines in activity were evidenced, while in the Prairie Provinces and British Columbia reductions on a larger scale were indicated, in these three districts the largest losses occurred in construction although the contractions in sawmills in Ontario were also very pronounced. Reports from firms in Montreal showed that a distinctly upward tendency was manifested in that city, mainly on account of increased activity in shipping and stevedoring, the gains representing an effort to clear up the harbour before the close of navigation. In addition, improvement was recorded in glass, boot, shoe and car plants. On the other hand, reductions in employment were indicated on street railways, in garment and sugar factories and in street construction and maintenance. In Toronto, a rather small increase in personnel was registered. Agricultural implement works were considerably busier, as were also retail establishments. Employment on the street railways, in garment factories and in building declined. Ottawa firms, on the whole, recorded curtailment of operations, mainly on account of seasonal slackness in sawmills and construction. In Hamilton, the situation showed practically no change, a nominal increase only being reported. In that city railway car works were considerably busier and the production of electric current also afforded more employment. Garment factories, on the other hand, were dull and construction declined. The trend in Winnipeg was downward, increased activity in retail trade being offset by reductions in personnel in the construction trades, in textiles and in wholesale houses. Considerable losses were reported in Vancouver, mainly in street railway and water transportation. The construction industries moreover were not so brisk. A review of the reports by industries shows that the manufacturing division, as a whole, was very slightly

busier than in October. The most pronounced increases in the group were those in railway car works, steel furnaces and rolling mills, which slightly more than offset the large seasonal declines in sawmills. Garment factories were slacker. Pronounced expansion was again evidenced in logging camps; water transportation and retail trade also afforded considerably more employment. The construction industries, particularly the construction and maintenance departments of the railways reported marked curtailment in employment. Street and steam railways were not as fully employed as in October.

An article elsewhere in this issue gives in greater detail the employment situation during November as reported by employers.

#### TRADE UNION REPORTS

A further small decrease in the volume of employment was registered during November, the 1427 labour organizations with a combined membership of 147,243 persons having reported 6.2 per cent of their members unemployed as compared with 4.0 per cent in October and with 11.1 per cent in November, 1921. (Unemployment as used here has reference to involuntary idleness due to economic causes; persons occupied in work other than their own trades or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to those unions reporting.) In all provinces with the exception of Manitoba less favourable conditions prevailed than in October, the increase in unemployment in Quebec being particularly marked owing to between-season idleness in garment

establishments in Montreal. During the month under review employment was in greater volume in every province than in the corresponding month of last year.

In the manufacturing industries more unemployment was reported than in the previous month owing to reduced activity among garment workers and in lesser volume among furniture, leather, textile and pulp and paper mill workers. The printing and publishing, iron and steel and clay, glass and stone divisions, however, registered smaller percentages of idleness. Within the printing and publishing group employment for compositors showed considerable improvement over October. In the iron and steel group blacksmiths, machinists, patternmakers, railway carmen and sheet metal workers were better employed, but boiler makers and moulders were not as busy. More idleness was recorded among Nova Scotia coal miners, but in British Columbia no unemployment was registered. Owing to seasonal inactivity in building operations employment in the building and construction trades was at a lower level than in October. Considerably less work was afforded bridge and structural iron workers, carpenters and joiners, and painters, decorators and paperhangers, and reductions on a smaller scale were reported by steam shovel and dredge-men, bricklayers, masons and plasterers, electrical workers, granite and stonecutters, plumbers and steamfitters and hod carriers and building labourers. Tile layers, lathers and roofers, however, were better employed. With the exception of hod carriers and building labourers, more favourable conditions were reported in all groups of the building and construction division than in November, 1921. The percentage of idleness in the transportation group was on practically the same level as in October. Very slight improvement was registered in the shipping and stevedoring and steam railway divisions, but street and elec-

tric railway employees were not quite as fully engaged. Little change in the volume of employment was recorded by fishermen and the percentage of idleness among lumber workers and loggers was small. Retail clerks, civic, and theatre and stage employees and barbers were busier, but hotel and restaurant employees and stationary engineers and firemen were not so fully engaged.

#### EMPLOYMENT OFFICE REPORTS

During the month of November, 1922, the offices of the Employment Service made 29,226 references to positions and effected a total of 27,445 placements. Of these, the placements in regular employment were 20,586 (17,988 men, and 2,598 women), and those in casual work numbered 6,859. The number of applications for employment registered at the offices was 42,494, of which 33,788 were from men and 8,706 from women. Employers notified the Service of 29,337 vacancies, 21,768 of which were for men and 7,569 for women workers.

When comparison is made with the preceding month, a considerable decrease in the volume of business is shown, owing to the fact that the October figures were much enhanced by abnormal farm placements in the province of Saskatchewan; there was however, a greater volume of business transacted than during November of last year.

A detailed report of the work of the offices of the Employment Service during the month is given elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics, the value of building permits issued in 56 cities in November showed a minor decrease as compared with the previous month, and a somewhat larger decline in comparison

with November, 1921. The estimated value of the permits issued during the month was \$9,176,861 as compared with \$9,337,253 for October and \$10,932,164 for November, 1921.

Another article in this issue gives fuller information with respect to the permits issued in November.

According to the *Canadian Building Review*, issued by MacLean's Building Reports, Limited, the value of contracts awarded during November amounted to \$21,453,900, as compared with \$24,270,300, in October, and with \$16,639,800, in November, 1921. There was, therefore, a decline of 11.6 per cent in the former and an increase of 28.9 per cent in the latter comparison. Of the total for the month under review, \$19,813,400, or 92.4 per cent, was to be spent in Quebec and Ontario; \$223,500, or 1.0 per cent, in the Maritime Provinces; and \$1,417,000, or 6.6 per cent in the Western Provinces. A further analysis shows that \$7,864,800 was to be used for residential purposes, \$7,035,700 on business establishments, \$743,600 on industrial contracts, and \$5,779,800 on engineering contracts.

#### PRODUCTION REPORTS

According to the Dominion Bureau of Statistics the production of pig iron in November dropped 7 per cent from the record of the previous month and amounted in all to 34,289 long tons as compared with 36,888 tons in October. The total output for the first eleven months of 1922 was 347,166 tons, as compared with 554,437 tons in the corresponding period of 1921, representing a decline of 37.4 per cent. Ferro-silicon was the only ferro-alloy produced during November, the production being 1,502 tons, a decline of about 300 tons from the preceding month. Four furnaces were active in November as in the previous month, two of these being at Sydney and one each at Sault Ste. Marie and Hamilton.

The production of steel during November declined 1,217 tons, or 2.3 per

cent, below the previous monthly output, the totals being respectively 51,418 tons and 52,735 tons. The total production for the first eleven months of 1922 was 438,988 tons as compared with an output of 624,831 tons during the corresponding period of 1921, representing a decline of 29.7 per cent.

A report from the Department's correspondent at Cobalt states that 17 cars containing 1,308,400 pounds of silver ore were shipped during November from the Cobalt camp, as compared with 58 cars containing 4,688,600 pounds in the previous month. The October tonnage, however, was made up largely of residue which contained a high percentage of frozen moisture. The Nipissing mine shipped 220 bars of bullion containing 252,034 ounces of silver, and the Mining Corporation of Canada shipped 202 bars containing 203,952 ounces of silver, making a total of 442 bars containing 455,986 ounces of silver for the month of November as compared with 731 bars and 780,548 ounces of silver for the previous month.

A report from the British Columbia Forestry Branch shows that 181,562,000 feet B.M. of timber was scaled in that province during November. This total included Douglas Fir, 89,416,000 ft. B.M.; Red Cedar, 40,131,000 ft. B.M.; Hemlock, 25,205,000 ft. B.M.; Spruce, 10,511,000 ft. B.M.; and smaller quantities of other species.

The gross earnings of the Canadian National Railways (including electric lines), according to a preliminary statement issued, amounted to \$13,042,333 in November, as compared with \$12,839,108 in November, 1921. The total earnings for the first eleven months of 1922 were given as \$109,570,263 as compared with \$115,336,178 for the same period in 1921. The gross earnings of the Canadian Pacific Railway Company for November were given in a preliminary statement as \$21,421,077, as compared with \$18,787,679 for November, 1921. The total earnings for the first eleven months of 1922 were given as \$169,309,396 as compared with \$177,264,930 for the same period in 1921.

### Strikes

The time loss due to industrial disputes reported to the Department during December was greater than during November, 1922, but less than during December, 1921. There were in existence at some time or other during the month 15 strikes involving about 3,018 workpeople with an estimated time loss of 60,561 working days, as compared with 14 strikes involving 2,190 workpeople and resulting in a time loss of 52,046 working days in November, 1922; and 18 strikes, 3,759 workpeople and 61,365 working days in December, 1921. On December 1, there were on record 12 strikes affecting 1,904 workpeople. Three new strikes were reported as having commenced during December as compared with one during November. Two of the strikes commencing during December terminated during the month, leaving 13 strikes involving about 2,365 workpeople on record at the beginning of January.

### Prices

In prices the movement was again upward, both the index number of wholesale prices and the family budget in terms of retail prices having advanced to slightly higher levels, due largely to seasonal advances in agricultural products.

In wholesale prices the index number was up to 223.0 as compared with 221.7

for November; 230.7 for December, 1921; 356.6 for May, 1920 (the highest point reached); and 137.6 for December, 1914. Agricultural products and foods were generally higher except western grains, hay, and live and dressed hogs, which were lower. Metals, fuel and building materials were also higher, while textiles and hides were lower. As compared with a year ago all groups were lower except animals and meats, textiles, hides, metals and fuel.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in sixty cities was \$10.39 at the beginning of December as compared with \$10.29 at the beginning of November; \$11.00 for December, 1921; \$16.92 for June, 1920 (the highest point reached); and \$7.96 for December, 1914. The total of the combined budget of food, fuel and rent was \$20.97 at the beginning of December as compared with \$20.89 at the beginning of November; \$21.49 for December, 1921; \$26.92 for July, 1920 (the highest point reached); and \$14.26 for December, 1914. Fresh eggs accounted for much of the increase, though dairy products generally, and sugar were higher. The chief declines were in meats, except mess pork, rice, beans, evaporated apples and potatoes. Bread, flour and rolled oats were unchanged. Fuel was slightly lower. Rentals were steady.

## IMPORTS AND EXPORTS DURING NOVEMBER, 1922.

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of November 1921 and 1922, and for the eight months ending in November of those years, and the ex-

ports domestic and foreign of similar classes of goods for the same periods.

The following table shows the imports free and dutiable and the exports, domestic and foreign, of the various classes of products, for the month of November, 1922:

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
Agricultural and vegetable products, mainly foods	\$ 1,667,029	\$ 8,716,290	\$ 78,773,751	\$ 59,634
Agricultural and vegetable products, other than foods	1,794,547	2,934,902	2,752,590	221,662
Animals and animal products.....	1,697,363	2,670,089	13,335,578	50,329
Fibres, textiles and textile products.....	5,778,532	8,099,275	720,078	180,665
Wood, wood products and paper.....	1,242,082	2,151,114	20,759,923	48,173
Iron and its products.....	1,126,553	9,822,021	4,405,279	208,043
Non-ferrous metals and their products.....	1,093,306	2,435,090	5,016,448	55,440
Non-metallic minerals and products.....	8,212,133	9,541,659	2,458,355	57,690
Chemicals and allied products.....	1,162,246	1,498,140	1,280,125	19,834
Miscellaneous commodities .....	1,824,752	2,721,327	1,294,566	127,336
Totals .....	\$25,604,343	\$50,589,907	\$130,796,673	\$1,023,309

In November, 1922, the duty collected amounted to \$11,605,259 as compared with \$9,891,761 in November, 1921.

The following comparative table shows the values of merchandise enter-

ed for consumption and the merchandise, domestic and foreign, exported in the months of November 1921 and 1922, and in the eight months period ending November of these years respectively:

	Month of November		Eight months ending November	
	1921	1922	1921	1922
Merchandise entered for consumption.....	\$ 64,211,434	\$ 76,194,250	\$ 502,604,932	\$ 506,985,187
Merchandise, domestic, exported.....	86,533,892	130,796,673	502,152,675	621,705,316
Totals .....	150,805,296	206,990,923	1,004,757,607	1,123,690,503
Merchandise, foreign, exported.....	1,106,155	1,023,309	9,638,969	9,484,863
Grand totals, Canadian trade.....	151,911,451	208,020,232	1,014,396,576	1,133,175,366

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF DECEMBER, 1922.

**D**URING the month of December the Department received reports of two Boards of Conciliation and Investigation established to deal with disputes between (1) the Grand Trunk Railway System and certain of its employees, being clerks, freight handlers, stationmen, stationary engineers and firemen, oilers, roundhouse shop and store labourers, etc., members respectively of the Canadian Brotherhood of Railroad Employees and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employers, and (2) the Canadian Pacific Railway Company, and certain of its employees, being shipmasters, mates and marine engineers in the British Columbia Lake and River Service of the Company, employed in vessels

operating between points on Lakes Kootenay, Slocan, Arrow and Okanagan, members respectively of the Canadian Navigators' Federation, Pacific Division, and of the National Association of Marine Engineers.

### Application received

During the month of December an application for the establishment of a Board of Conciliation was received from employees of the Toronto, Hamilton and Buffalo Railway Company, being freight handlers, members of the Canadian Brotherhood of Railroad Employees. The application was subsequently withdrawn, a satisfactory settlement having been, with the efforts of the Minister of Labour, reached by the parties to the dispute.

## Report of Board in dispute between the Canadian Pacific Railway Company and certain of its employees being shipmasters, mates and marine engineers

A report was received from the Board established to deal with the dispute between the Canadian Pacific Railway Company and certain of its employees, being shipmasters, mates and marine engineers in the British Columbia Lake and River Service of the Company members respectively of the Canadian Navigators' Federation, Pacific Division, and of the National Association of Marine Engineers. The Board was composed of Mr. Robert S. Lennie, Vancouver, Chairman and Messrs. E. A. James and John Fyfe, both of Vancouver, nominees of the Company and employees respectively. The report was unanimous and contained recommendations for the settlement of the dispute.

The text of the report is as follows:

### Report of Board

Report of Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, in a dispute between the Shipmasters, Mates and Marine Engineers employed in vessels operating on the B. C. Lake and River Service of the Canadian Pacific Railway Company.

Vancouver, B. C.,  
1st December, 1922.

To the Registrar,  
Boards of Conciliation  
and Investigation,

Department of Labour,  
Ottawa.

Sir:—

Pursuant to the appointment of the Minister of Labour for Canada, the members of your Board, consisting of Robert S. Lennie, Chairman, Edwin A. James, Esq., representing the C. P. Ry. Co., and John Fyfe, to enquire into the dispute set forth in the application for

appointment of the said Board, beg to report as follows:—

The B. C. Lake and River Service of the C. P. R. Company comprises passenger and tow boats operating on the Kootenay, Slocan, Arrow and Okanagan Lakes, in the interior of the province. This service is for the purpose of connecting railway lines and transporting passenger barges and freight between the points on the said respective lakes. It has no connection with, or similarity to the coastal service which is operated separately from the railway company. The shipmasters, mates and marine engineers on the said boats complain that:—

- (a) The company has refused to acknowledge the committees which were appointed by the different organizations, and refused to acknowledge that those committees were representatives of the organizations, and that the company did not give the wishes of their committees who did meet them reasonable consideration.
- (b) That the method of negotiating agreements through the organizations is unsatisfactory; and that the representatives of the men's organizations should be included in the negotiating committee.
- (c) That the basic rate paid to officers on these vessels has always been too low and should be readjusted and made retroactive.
- (d) That there should be a general readjustment of working conditions particularly with regard to excessively long days and one day free from the ship in seven.
- (e) That there should be an adjustment of wages for individual ranks now underpaid in comparison with other men in the service.
- (f) That the present method of promotion is continually causing dissatisfaction and a recognized system of seniority should be established.
- (g) That the status of the officers in the service be defined, and that they should be rated as steamship men.
- (h) That the men should be allowed subsistence in home ports when ships are unable to supply them their meals.

These various complaints were put forward by Ephraim Reid, secretary of the National Association of Marine Engineers, and Andrew Goodlad, secretary of the Canadian Navigators' Federation, Pacific Division, on behalf of the men; and by Mr. F. W. Peters, general superintendent and his assistant, Charles A. Cottrell, representing the company. The Board considered these complaints during the months of October and November and at the conclusion of the evidence the following took place:—

THE CHAIRMAN:—Now, gentlemen, it is usual in conciliation boards, after you have had every opportunity to give your evidence on both sides, for the Chairman to suggest the possibility of your reaching an agreement. If you indicate that there is no possibility, of course then it will be necessary for us to make our report.

MR. PETERS:—Well, Mr. Chairman, speaking for the company we are willing to meet the committee of our own men up in Nelson and discuss working conditions, nearly all of which have been referred to here, and we believe we can remove any objections there may be with regard to these working conditions; not perhaps entirely what the men have asked in their report here, but we will go as far towards it as we consistently and reasonably can; but if it is a question, as I understand it is, to be put to the Board to ask that we restore the 10 per cent reduction, I will have to say what we have said every time we met them since we made that reduction, and before we made it, that the reduction can be justified having in view the rates paid in other directions and that we cannot consider restoring that reduction to the least possible extent—not to any extent.

MR. REID:—Mr. Chairman, in so far as the marine engineers are concerned we court a mutual understanding, but if it is a question of Mr. Peters declining any consideration in so far as the restoration of the wages, or the introduction of something that will satisfy the men, we leave that in your hands and we hope the decision will be amicable.

MR. GOODLAD:—Well, sir, we are very pleased indeed to know that the company intend to sustain us on the working conditions. As far as the wages are concerned it is a serious matter. The wages the men have been getting does not give them a great deal to live on or to throw away. . . . But since wages are reduced to the small amount to which they naturally are in comparison if you take the wages put in as to the men on the ocean

vessels, it is certainly a small amount; and, sir, we hope that the Board will see their way clear to think with us that these men should not have a reduction; that they should have an adjustment for what they have been receiving previously.

THE CHAIRMAN:—Then there is no hope of your reaching any agreement?

MR. GOODLAD:—Not on the wages.

It will thus be seen that the major portion of the men's complaints were met by the company after the fullest discussion and all the evidence the men desired to give on the subjects of the various complaints.

It is also to be noticed that substantially all of these complaints originated after the company had reduced the men's wages in common with all other employees of the company 10 per cent in October, 1921.

The Board would therefore recommend:

1. That one day in seven free from the boat should be allowed to each officer, and when this cannot reasonably be done, such days should be credited to the man and made up to him at another time.
2. That the principle of seniority should be recognized in the creation of permanent positions as far as possible except for special reasons.
3. That the company's general rule of recognizing only men in its employ in negotiations should be satisfactory to the men.

#### WAGES AND SUBSISTENCE.

These two subjects are interlocked and should, therefore, be dealt with together. They really form the substantial ground of complaint. It should be remembered that this Lake and River Service is really a connecting link between the railroad and the different lakes. The boats connect with trains at both ends. No evidence of complaints in regard to wages was raised until the 10 per cent cut occur-

red in 1921. The evidence establishes that this service is running at a loss and there had been an increase in operating expenses and a decrease in earnings prior to the reduction in wages; that the reduction was general and applied to approximately 100,000 men in the company's employ; that there has been no further reduction of the 51 men involved in the complaint, whereas there has been a further reduction of 10 per cent to some of the railway employees.

At the outset of the inquiry the men desired that they should be classified as steamship men; and during the course of the inquiry it was conceded that they should be so classified so far as working conditions were concerned. But the company pointed out that these men were under a different jurisdiction to the coastal steamship men, and regard should be had to that fact in considering whether the reduction was justified.

It was also pointed out by a witness who had experience both on tidal and inland waters, that there was no comparison as regards responsibility, efficiency, and the nature and importance of the work assigned to officers on tidal waters as compared with the interior lakes. Practically all the witnesses called to support the complaint base their objection upon the 10 per cent reduction. Considerable evidence was given by comparing the wages of the coastal service with that of the interior; and evidence was given to show that the interior had not received as many increases during the Great War period as were given to the coastal service.

It was also pointed out by some of the men that as they were towing barges and freight cars and were required sometimes to switch these cars, they should be regarded as railway men and receive pay accordingly.

It was also pointed out that the wage paid the steamship men included their board and lodging. The point was made by the company that a comparison of increases between the coastal and interior service was not fair, because during the war period increases were general in competitive areas due to ship-building and other war vocations making it impossible to continue the service without meeting this competition.

The Board, therefore, consider that this dispute should be confined to the 10 per cent reduction. They also consider that the coastal service should not be compared with the interior for the foregoing reason in addition to the reasons given by Douglas Brown, Superintendent of the Lake and River Service, in his evidence at page 244, as follows:—

MR. GOODLAD:—You have had experience on coastal vessels have you, Captain? A. About 28 years.

Q. Would you compare the responsibilities of the masters and officers of the Lakes as being similar to the responsibilities of the masters and officers on the coast? A. Well, I certainly should not. You take a man leaving Vancouver here when you cannot see your hand in front of you, with about two or 300 people sleeping under you, thick weather, trying to make your time to Victoria—I don't see how you can possibly compare that with the Lake service. I appreciate my men and I appreciate the service, but it is certainly not in the same street as the coast service. . . . Now, you take as regards the service—you take the tides and currents and the traffic that there is down here, there is no traffic up there. I appreciate my men as much as anybody does, but at the same time I fail to see where the comparison can possibly come in, honestly and straightforwardly. . . .

It was established that the cost of living had gone down prior to the reduction, and in view of the foregoing facts and circumstances your Board are unable to say that the present rate of wages is unjust or unfair and submit that the 10 per cent reduction was justified on the evidence submitted.

*Subsistence*:—In view of the fact that the board of men is admittedly included in their wages, the Board recommends that a subsistence allowance should be made to the engineers in their home port when they are on duty and unable to secure their board on the boat when she is laid up for repairs, and the

amount suggested, \$1.50 per day, is reasonable in the circumstances.

All of which is respectively submitted.

(Sgd.) R. S. LENNIE,  
Chairman.

(Sgd.) E. A. JAMES.

(Sgd.) J. FYFE.

Dated at Vancouver, B.C., this 11th day of December, A.D., 1922.

### **Report of Board in dispute between the Grand Trunk Railway System and certain of its employees, being clerks, freight handlers, etc.**

A report was received from the Board established to deal with the dispute between the Grand Trunk Railway System and certain of its employees, being clerks, freight handlers, stationary engineers and firemen, oilers, roundhouse shop and store labourers, etc., members respectively of the Canadian Brotherhood of Railroad Employees and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was composed of Mr. E. McG. Quirk, Montreal, Chairman, and Messrs. U. E. Gillen, Toronto, and Howard S. Ross, K.C., Montreal, nominees of the Railway and employees respectively. The report was unanimous and was accompanied by an agreement signed by both parties to the dispute.

The text of the report and of the agreement is as follows:

#### **Report of Board**

Re Industrial Disputes Investigation Act, 1907, and re differences between the Grand Trunk Railway System and certain of its employees, being clerks, freight handlers, stationary engineers and firemen, oilers, roundhouse, shop and store labourers, etc., members respectively of the Canadian Brotherhood of Railroad Employees and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Montreal, Quebec,  
December 12th, 1922.

Honourable James Murdock, M.P.,  
Minister of Labour,  
Ottawa, Ont.

Sir,

The Board has the honour to submit herewith its final report.

1. At the first public meeting of the Board, Mr. Mosher asked whether the employers were prepared to follow the precedent set in the shopmen's and Canadian National cases, and suspend the wage reduction until after the Board made its report. He said he was not in a position to precede until the employers made their policy known, and cited in support of his contention the opinion of the Department of Justice.

2. The Grand Trunk then filed a statement with the Board reading:

"The Grand Trunk, while maintaining its position that it was legally justified in putting into effect reduced rates of pay as of July 20th, 1922, is, pending an anticipated early report of the Board of Conciliation, prepared in the interests of harmony and co-operation with its employees to continue the former scale of rates, on the understanding that this is done without prejudice to the company's case before the Board and that the company shall not be prevented, in negotiating any agreement during or subsequent to the proceedings before the Board, from taking the position that the new scale should be retroactive to 20th July last."

3. The official committee representing the company and the committee representing the employees agreed on rules governing working conditions prior to the meeting of the Board. They made an agreement, dated September 28th, without advice from any member of the Board. That agreement, among other things, provided that both parties to the dispute would accept the decision of the Board, which is evidence of the harmonious relations existing between the officers and employees, also the confidence they had in the ultimate findings of the Board, which it appreciates and hereby acknowledges.

4. During the proceedings the Board from time to time made suggestions with a view to having the employer and employees make a mutual agreement on all matters in dispute, with the result that both sides made concessions and certain propositions. The propositions were rejected and the matters in dispute were referred on November 16 to the Board for its award. After conference between the Board members, the whole case was considered. The chairman, on November 17th, submitted a written suggestion to both parties. It provided for further and equal concessions, and we are pleased to report the suggestion was accepted by the parties.

5. The Board wishes to record its deep appreciation of the manner in which the respective arguments were submitted evidencing careful preparation. It acknowledges the courtesy and pains taken by the representatives of the company and employees in their efforts to furnish the Board with the fullest information.

6. The representatives of the company appearing before the Board were: C. F. Needham, Chairman, Committee of Officers; A. P. Linnell; J. F. Aitchison; H. A. Balkwill; G. H. Jones; J. M. Sparling; E. J. McVeigh; G. Turvey and R. C. Johnston.

The employees were represented by: A. R. Mosher, President, Canadian Brotherhood of Railroad Employees; J. E. McGuire, Chairman of Employees' Committee; A. E. Lawrence; J. E. Chick; F. J. Ainsborough, J. B. Burnett and M. J. Affachiner.

7. The mutual agreement signed by the authorized representatives of the company and the men, indicating the various rates of pay for the different classes and employees concerned, is enclosed herewith.

Respectfully submitted,

(Sgd.) E. MCG. QUIRK,  
Chairman.

(Sgd.) U. E. GILLEN,  
Member.

(Sgd.) HOWARD S. ROSS,  
Member.

#### GRAND TRUNK RAILWAY SYSTEM

Office of General Superintendent Motive  
Power and Car Departments.

Montreal, December 12th, 1922.

Mr. E. McG. Quirk,  
Chairman.

Mr. U. E. Gillen,  
Member.

Mr. Howard S. Ross, K.C.,  
Member.

Board of Conciliation.

Dear Sirs,—

Enclosed please find lists showing the new rates of pay for employees covered by Schedule for Clerks, Stationmen, Roundhousemen, etc., effective November 1st, 1922, duly signed by the Employees' Committee and on behalf of the Railway.

Yours truly,

(Sgd.) A. R. MOSHER.

(Sgd.) C. F. NEEDHAM.

#### GRAND TRUNK RAILWAY SYSTEM

(Canadian Lines)

(Grand Trunk Railway System excluding Grand Trunk Western Lines, Atlantic & St. Lawrence Railroad, Lewiston & Auburn Railroad, Champlain & St. Lawrence Railroad, United States & Canada Railroad and St. Clair Tunnel Company.)

Rates of Pay effective November 1st, 1922, for positions covered by schedule of rules governing working conditions effective June 16th, 1922, for "Clerks and other classes of Employees as herein named."

Montreal, December 9th, 1922.

### PROCEEDINGS OF CANADIAN RAILWAY BOARD OF ADJUSTMENT. No. 1.

**THREE** new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. (Earlier decisions of the Board appeared in the LABOUR GAZETTE for November, 1922, on pages 1171 to 1180, and in previous issues.) Supplement No. 1 to Case No. 33 has reference to the interpretation of a decision as to the payment of conductors and trainmen of the Canadian National Railways for delayed time on trains scheduled to run through certain terminals. Case No. 147 has reference to the claim of a conductor to reinstatement on the Canadian National Railways. Case No. 148 has reference to a dispute in connection with the dismissal of a conductor of the Canadian National Railways. The Board reported that Case No. 113 concerning the dismissal of a section foreman of the Grand Trunk Railway System had been withdrawn, a settlement having been reached.

Supplement No. 1 to Case No. 33—The Canadian National Railways (Canadian Northern Railway Co.) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

A dispute arose between the Canadian National Railways, western lines, for-

merly the Canadian Northern Railway, and its conductors and trainmen over the interpretation of a decision rendered by the Board of Adjustment in Case No. 33. This decision had reference to payment for delayed time on trains scheduled to run through certain terminals, and the question at issue was as to payment where no switching is performed at such places, but an excess of time is occupied over that allowed by the time bill.

It was maintained by the Railways that a portion of the decision rendered in Case No. 33 clearly defined the situation. This provided that delayed time at an intermediate terminal should only be paid for when switching is performed at such terminals. Where switching is performed by a crew at an intermediate terminal, all time delayed either before commencing the switching between the switching movements, or after the switching has been completed, shall be included and paid for, and such time shall be deducted in computing overtime. Where no switching is performed by a train crew in passing through an intermediate terminal, the time delayed for meals, changing en-

gine, train connections or other causes, shall be computed only as road time.

On behalf of the employees it was contended that in Case No. 33, the decision rendered did not cover anything beyond the number of minutes as printed in the time bill, and that conductors and trainmen were entitled to any time delayed beyond that shown in the time bill.

The Board held that under the conditions stated, terminal delay time should not be allowed except where switching is performed, as other delays are provided for in road overtime. By decision of the Board the claim of the employees was denied.

**Case No. 113—The Grand Trunk Railway System and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.**

This case, which had reference to the dismissal of a section foreman, was presented to the Board on December 20, 1921, but it was referred back to the parties as additional information was required. The Board has been informed that a settlement had been reached and the case was withdrawn.

**Case No. 147—Canadian National Railways (Canadian Northern Railway Co.) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.**

A controversy arose as to the seniority rights of a conductor on the Canadian Northern Western Lines roster. Under an agreement the trains of the Midland Railway running between Winnipeg and Emerson are manned by Canadian National Railway crews. A conductor of the Canadian National Railways who was employed by the Midland Railway on this run was dismissed from the Midland Railway, and on the Canadian National Railways being advised to this effect his record was closed. Nearly a year later the Midland Railway advised the National Railways that they had reconsidered this conductor's case and had decided

to reinstate him. A request was then made that, on his reinstatement by the Midland Railway the Canadian National Railways records be immediately changed to cover such reinstatement, and that he be restored to his full rights to enable him to bid in on any run his seniority would entitle him to.

The management of the Railways maintained that as this employee was discharged by the Midland Railway for a good and sufficient cause he was automatically debarred from service so far as the National Railways was concerned and they were not bound by any action the Midland Railway might take as a result of reconsidering his case.

The representative of the conductors maintained that under the agreement between the two railways, conductors are permitted to return from the Midland Railway to the Canadian Northern Railway in accordance with the seniority rights. That, as this conductor had committed no offence against the Canadian Northern Railway the latter had no right to make its records final on the first advice received of his dismissal, in view of the fact that the Midland Railway saw fit to reverse its decision, and that therefore his reinstatement with the Midland Railway should automatically restore his rights on the Canadian Northern.

The Brotherhood of Railroad Trainmen being a party to the agreement became thereby a party to this dispute, as the matter of interpretation of the rights of trainmen as well as conductors was involved.

In a general statement the Board set forth its opinion as follows:—

Trainmen employed on Midland trains are, in an operating sense, subject to the rules and instructions of the Canadian National Railways, but as to handling transportation their duty is to the Midland Railway. As the offence for which Conductor B— was dismissed was against the latter Company, and as the record of this conductor in this respect has been cleared by reinstatement by the Midland Railway, the Board feels that in

permitting this employee to handle trains of the Midland Railway over their line, the C. N. R. have acquiesced in his reinstatement, inasmuch as only Canadian National Railways trainmen can be employed on Midland trains. If the action of the Midland Company was objectionable to the C. N. R. objection to the reinstatement should have been made at the time.

In dealing with this case the question of principle is not determined, and the decision of the Board is merely on the facts as presented in this particular case.

The Board therefore ruled that the conductor be reinstated on the Canadian National Railways seniority list.

**Case No. 148—The Canadian National Railways Western Lines and the order of Railway Conductors.**

Following a rear end collision the conductor and rear brakeman of a train of the Canadian National Railways were dismissed on the ground that they had failed to protect their train in time to allow the engineer on the train behind them to stop before striking their train. On behalf of the conductor it was contended that he had not been negligent in any of his duties and was

not responsible in any way for the accident, as when the train had slackened speed and it became evident it was going to stop he had immediately instructed his brakeman to get off and protect the rear end, and the latter had actually got off the train before it stopped.

The Board held the opinion, from the evidence submitted, that some of the employees concerned were negligent in the discharge of their duties but the evidence did not show that the responsibility rested entirely upon the dismissed conductor, in view of the lack of corroborative evidence as the Board considered the discipline applied to the conductor was excessive, but it was convinced that there was a general disregard of the ordinary precautions which should have been observed and which are required by the operating rules.

By decision of the Board the claim of the employees was sustained to the extent that the conductor be reinstated without pay for time lost.

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1922

THE following table shows the number of strikes in existence in Canada at some time or another during December, 1922, reported to the Department, together with the number of employees involved and the time loss in working days, as compared with the previous month and with December, 1921.

	Disputes	No. of employees involved	Time loss in working days
December, 1922.....	15	3,018	60,561
November, 1922.....	14	2,190	52,046
December, 1921.....	18	3,759	61,365

10 strikes of the compositor's and pressmen's still in existence, involving 1,640 workpeople and resulting in a time loss of 41,000 working days.

Three new strikes were reported as having commenced during December. They were all in the coal mining group and involved 1,357 workpeople with a time loss of 19,036 working days. Twelve strikes were carried over from November, these causing a time loss of 47,600 working days during the month under review. Two of the new strikes commencing during December terminated during the month. At the end of the month there were, therefore, still on record 13 strikes, affecting 2,365 workpeople as follows: coal miners, Cardiff coal field, Alberta; coal miners, Edmon-

Again, as in several previous months, the greatest time loss was in the printing and publishing group, there being

## STRIKES AND LOCKOUTS DURING DECEMBER, 1922.

Industry, occupation and locality.	Number of employees involved.	Time lost in working days.	Particulars
------------------------------------	-------------------------------	----------------------------	-------------

## (a) Strikes commencing prior to December, 1922.

MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Cardiff coal field, Alberta.	243	6,075	Commenced November 21, for recognition of the union and improved working conditions. Unterminated.
MANUFACTURING—			
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que.	30	750	Commenced May 2, 1921, for shorter hours. Unterminated.
Printing compositors, Hamilton, Ont.	42	1,050	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Unterminated.
Printing compositors, Montreal, Que.	10	250	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Unterminated.
Printing compositors, Montreal, Que.	410	10,250	Commenced July 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Montreal, Que.	25	625	Commenced September 15. Employer refused to negotiate a new agreement with the Union. Unterminated.
Printing compositors, Toronto, Ont.	711	17,775	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Winnipeg, Man.	190	4,750	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Unterminated.
Printing compositors and pressmen, Halifax, N.S.	51	1,275	Commenced May 2, 1921, for shorter hours with same weekly wages. Unterminated.
Printing compositors and pressmen, Ottawa, Ont.	139	3,475	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors and pressmen, Vancouver, B.C.	52	800	Commenced May 2, 1921, for increased wages and 44-hour week. Unterminated.
TRANSPORTATION—			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	21	525	Commenced July 1, for recognition of the union. Unterminated.

## (b) Strikes commencing during December, 1922.

MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Drumheller, Alta....	130	390	Commenced December 5, dispute with pit boss. After negotiations men returned to work December 8.
Coal miners, Drumheller, Alta....	523	1,046	Commenced December 6, in sympathy with miners who struck at Drumheller, December 5. Work resumed December 8, after strike was ended.
Coal miners, Edmonton coal field, Alta.	461	11,525	Commenced December 1, for recognition of union and improved working conditions. Unterminated.

ton, Alta.; photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors, Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing pressmen and compositors, Vancouver, and motormen and conductors at Niagara Falls.

#### Disputes by Industries.

The following is a review of disputes by those groups of industries in which strikes or lockouts occurred during the month, in the order in which they appear in the statistical table.

#### MINING, NON-FERROUS, SMELTING AND QUARRYING.

During December three strikes of coal miners occurred at mines in Alberta. Two strikes took place at Drumheller, one, affecting 130 workpeople, occurring on December 5, owing to a dispute with the pit boss. On December 6, 523 coal miners in the employ of four firms at Drumheller went on strike in sympathy with the men who stopped work on December 5. After negotiations were carried on the men voted to return to work December 8, and the sympathetic strike also came to an end. On December 1, a strike of 461 coal miners occurred in the Edmonton coal fields, Alberta, for recognition of the union and improved working conditions. This strike remained unterminated at the end of the month.

#### MANUFACTURING.

*Printing and Publishing.*—No changes were reported in the strikes in this group during December. Ten strikes were still in existence involving 1,640 workpeople and resulting in a time loss of 41,000 working days. Nine of these had begun in the spring and summer of 1921.

#### TRANSPORTATION.

*Steam Railways.*—The strike of railway employees in the employ of two steel companies at Sydney, N. S., which began November 22, 1920, was settled as a result of negotiations toward the end of November and work was resumed from December 1. The following statement as to the settlement was issued by the President of the Brotherhood of Railroad Trainmen in the published Circular of Instructions for December, 1922:

Effective December 1, 1922, agreements were executed between the Dominion Iron and Steel Company and committees of the engineers', firemen's, and trainmen's organizations, and between the Nova Scotia Steel and Coal Company and committees of the firemen's and trainmen's organizations, and the authorized strikes of such organizations which have been in effect on these properties since November 20, 1920, were declared off November 30, 1922. The agreements covered the rates of pay and conditions of train and engine employees, were the first signed agreements in effect on the properties, and while all that was desired in the way of rates and conditions of employment were not obtained, the best possible settlement under the circumstances was secured.

In declaring off the strikes it was with the understanding that a specified number of crews and extra employees would be restored to train and engine service, and that other striking train and enginemen would be taken back into the employ of the company in such positions as were available and at as near their former rates as possible, with the understanding that the men who take the positions in the plant will be given preference in road service when openings occur.

The agreements mentioned are summarized on another page in the article on "Recent Industrial Agreements." The narrow gauge engine employees who went on strike June 9, 1921, in sympathy with the railway employees on strike since November 22, 1920, were covered in the settlement, it being provided that some of them should be re-employed in the steel yards in their former positions where vacancies permitted and others in other departments.

*Street and Electric Railways.* — The strike of motormen and conductors of the Park and River Division of the International Railway at Niagara Falls

was still unacted at the end of the month. This strike began on July 1, the railway being operated since July by new employees.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING NOVEMBER, 1922.

THE British *Ministry of Labour Gazette* for December contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland, during November, 1922, based upon returns from employers and workpeople.

**NUMBER, MAGNITUDE AND DURATION.**—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in November in Great Britain and Northern Ireland, was 34, as compared with 32 in the previous month and 71 in November, 1921. In these new disputes about 6,000 workpeople were directly involved and 1,000 workpeople indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition, about 2,000 workpeople were involved, either directly or indirectly, in 21 disputes which began before November and were still in progress at the beginning of that month. The number of new and old disputes in progress in November was thus 55, involving about 9,000 workpeople, and resulting in a loss during November of 68,000 working days.

The number of disputes in progress in November, the number of workpeople involved in such disputes, and the time lost thereby, were lower than

those for any month since the early part of 1917.

**CAUSES.**—Of the 34 disputes beginning in November, 17, directly involving 2,300 workpeople, arose out of proposed reductions in wages; 6, directly involving 1,500 workpeople, on other wages questions; 3, directly involving 1,700 workpeople, on questions respecting the employment of particular classes or persons; 4, directly involving 200 workpeople, on details of working arrangements; and 4, directly involving 600 workpeople, on questions of Trade Union principle.

**RESULTS.**—Settlements were effected in the case of 17 new disputes, directly involving 4,300 workpeople, and 8 old disputes, directly involving

Groups of industries	No. of disputes in progress in November			Number of workpeople involved in all disputes in progress in November.	Aggregate duration in working days of all disputes in progress in November.
	Started before November 1	Started in November	Total		
Mining and quarrying .....	3	9	12	3,800	19,000
Metal, engineering and shipbuilding .....	8	5	13	2,200	15,000
Transport .....	1	5	6	800	8,000
Other trades .....	9	13	22	1,200	10,000
Employees of public authorities .....	.....	2	2	1,100	16,000
Total, Nov., 1922	21	34	55	9,100	68,000
Total, Oct., 1922	25	32	57	13,500	186,000
Total, Nov., 1921	45	71	116	34,500	228,000

700 workpeople. Of these disputes, 5, directly involving 600 workpeople, were settled in favour of the workpeople; 12, directly involving 2,700 workpeople, in favour of the employers; and 8, directly involving 1,700 workpeople, were compromised. In the case of one small dispute work was resumed pending negotiations.

The accompanying table classifies the disputes in progress in November, in Great Britain and Northern Ireland, by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all the disputes in progress.

### CONVENTION OF INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION OF NORTH AMERICA

THE twenty-ninth convention of the International Printing Pressmen and Assistants' Union of North America was held at the Pressmen's Home, Tennessee, from September 25 to 30, 1922, with 264 delegates present, representing 167 unions and approximately 47,000 members. President George Berry was chairman. Among those who addressed the convention were, Hon. George H. Carter, public printer of the United States government; Hon. James J. Davis, secretary of the United States Department of Labour; Mr. Samuel Gompers, president of the American Federation of Labour; Mr. Thomas F. McMahon, president of the United Textile Workers of America; Mr. John J. Connolly, vice-president of the International Association of Machinists; Mr. Walter N. Reddick, president of the International Brotherhood of Bookbinders; Mr. James J. Freel, president of the International Stereotypers' and Electrotypers' Union; Mr. John McParland, president of the International Typographical Union, and Mr. Matthew Woll, president of the International Photo Engravers' Union.

The secretary-treasurer reported a balance of nearly \$50,000. During the year ended May 31, 1922, the Union had paid out \$60,600 in death benefits. A committee on Canadian Affairs reported on the progress made by the

unions in Canada in the strike for the 44-hour week which had begun on May 1, 1921, and which it was hoped would soon be terminated. The secretary-treasurer's report showed that the cities on strike had received financial assistance from the International Union for the year ended May 31, 1922, as follows: Ottawa, \$21,108; Montreal, \$5,400; Vancouver, \$12,210; Winnipeg, \$18,080; Quebec, \$254; Hamilton, \$14,282; and St. Johns, Newfoundland, \$7,516. These locals had received for strike benefits, \$79,047 during the year ended May 31, 1922, and during the same period, the International Union had received from locals in Canada, \$44,132. Appreciation was expressed of the action resulting from the last convention of placing in Canada a vice-president who is a member of a Canadian local. It was recommended that the Board of Directors should take the necessary steps to protect the interests of the International Union in Toronto.

#### 44-HOUR WEEK.

The 44-hour week was reported to have been practically established throughout the jurisdiction of the International Union, and the Board of Directors were recommended to seek to unify, systematically, the competitive conditions in North America with regard to hours and wages. The con-

vention endorsed the action of the Board in regard to the levying of a ten per cent assessment to meet issues arising in connection with the 44-hour week conflict.

#### INTERNATIONAL ARBITRATION CONTRACT.

The convention endorsed a tentative arbitration contract which had been negotiated by the Board of Directors of the International Union with the American Newspaper Publishers' Association.

#### TECHNICAL TRADE SCHOOL.

The Technical Trade School of the International Union, which has been in operation since 1911, was reported to have grown in size and in influence in America and abroad. The trustees reported that several local unions had subscribed to one or more of its correspondence courses, the lessons being read at meetings of the local. This method, they stated, was beneficial to some members though it was not attracting the attention that had been anticipated. Two branch schools were opened, one at Des Moines early in the year and another at Los Angeles later, which had proved satisfactory. At Des Moines, the local union elected an educational committee with a competent chairman to arrange weekly programmes, using the Technical Trade School's correspondence course as a basis and supplementing it by lectures

and demonstrations by special speakers. Manufacturers and employing printers co-operated with the union, local printing firms giving their plants at night for special demonstrations. As a result, it is stated, the 44-hour week was established in the city without expense or the loss of a man or a job, and an increase in wages was agreed upon between representatives of the union and of the employers. Output having increased considerably over production under the 48-hour week arrangement. Unanimously the convention adopted a recommendation to extend the trade education programme by establishing auxiliary zone schools as speedily as circumstances will warrant. It also adopted a recommendation to make it compulsory upon all registered apprentices in America to take a correspondence course through the Union's Trade School.

The convention also decided that a separate educational department should be established in The American Pressman for the dissemination of information and the encouragement of contributions in the form of special trade articles dealing with newspaper printing.

Mr. George L. Berry, of Jackson, Miss., is president of the International Union, and Mr. Joseph C. Orr, of Chicago, Ill., is secretary-treasurer. The Canadian vice-president is Mr. G. R. Brunet, of the Montreal Pressmen and Assistants' Union No. 52.

## CAPITAL AND LABOUR PROBLEMS

Special article from the pen of the Minister of Labour

THE following article, taken from the Financial and Business Survey of the Toronto Globe published on the 1st of January, was, by special request, contributed to that journal by the Honourable James Murdock, Minister of Labour for Canada:—

The closing of the old year and the beginning of the new is a fruitful time for thought, and of all questions bearing

intimately on the life of every Canadian perhaps the most worthy of consideration at this time is the condition of our industrial world—the welfare of the worker—holding in its grasp, as it does, the progress and prosperity of the nation.

The year 1922 has been an eventful one in the development of the labour situation in Canada. Facing, at the outset, a period of evolution and readjustment, with a marked gap existing between the avowed goals of employer and employee, with the line of conflicting aspirations clearly drawn, it must be a source of gratification to all loyal Canadians to feel that we have come through this year with much that is desirable accomplished, with much that would lead to regret and misfortune turned aside, and that, while much yet remains to be done, the trend of affairs has been toward solidarity and stability.

Behind us lay the march of labour's years, merging from blind helplessness at first, from the toil for bread followed mechanically as on a treadmill, from the starvation of spirit through dodging the famine line, to the banding together, to the usefulness of concerted action, to the voicing of desires, to the dare to be human, through an era of bitter conflict between master and man, until finally, born of necessity, of social development, of the spread of more humane ideas with the growth of a higher civilization, a broader spirit came into existence, whereby the employer looked beyond the measured hours of toil, beyond the brute load lifted, beyond the cog, to the human element in his employee, and economists and efficiency experts came to realize the tangible value of the worker's good-will.

#### Mutual Good-will and Understanding

And now it is generally admitted that no Government can function successfully, no nation can prosper, certainly no young nation can grow and develop unless its workers are at peace, satisfied and happy; and the workers of this or any other civilized country cannot find happiness, contentment or peace until mutual good-will and understanding, based on a fair deal, on justice and equity, exist between the employer—as representing Capital—and the employee—as typifying Labour.

Canada did not altogether escape the menace of industrial strife such as disrupted or seriously affected so many industries in other countries during the twelve months now about ending. It needs, perhaps, a close touch with the unrest and instability bordering on chaos existing elsewhere to fully appreciate our good fortune. But the situation at home was our problem. The demand of the Canadian worker today is for work, at wages that will enable him to maintain a decent standard of living for himself and his dependents. This demand is insistent and may not be ignored, and the big achievement is to reconcile it with the industrial and economic conditions prevailing, and with what can be asked from the employer as just and right. In the consideration of this question one condition must be faced by those who employ labour in large numbers—there is no setting the clock back the full way around.]

#### Problems of the Year

The records for the Labour Department during the year show many questions in dispute, the birth of potential quarrels as between employer and employee, brought about largely, on the one hand, through an attempt by the employer to return to conditions existing previous to the evolutionary changes of recent years, a persistent demand that operating costs should be reduced by the reduction of wages, and, on the other hand, an equally insistent resolve of the employees that the changes as proposed could not be, as they were not justified by any change in the governing factors.

Herein lay the material for grave and serious industrial trouble. The very atmosphere seemed weighted with conflicting elements, and to those to whom the Government of the country had been confided it was a time of anxious care that the turbulence and strife abroad in other countries should not lay devastating hands on the industrial life of this young nation. The year's retrospect shows that in many instances satis-

factory settlements of burning questions have been reached, and in many others the foundation of a better understanding has been laid as between the employer and employee, thus restoring and maintaining industrial harmony. In this Canada has food for rejoicing.

While many causes led to this favourable result, to my mind one of the most powerful contributing factors was that both employer and employee, generally speaking, showed an earnest and constant desire to reconcile their opposing viewpoints, and made a very real, a very evident effort to "find a way out." In other words, in most contentious questions of import brought to the attention of the department the negotiations between employer and employee have been carried on, with few exceptions, in a manifest spirit of willingness to co-operate in an adjustment, where possible; with a readiness to respond to mediation where co-operation could not be effected, and the sincerity and honesty of purpose actuating both afforded a tangible basis for mediation.

#### A Long Step Forward

This is a long step in the path of real progress, and on the fact that honours are fairly even to both sides, I base my belief that the governing conditions of labour in this country are developing along very satisfactory lines, with every promise that there will grow up between employer and employee in Canada a bond of common interest, as between two important classes of the community, each necessary to the success of the other. This bond is essential to the proper governing of Canada, and on it may be built an indestructible edifice of national industrial progress. 7

To bring two such opposing classes together on any common ground is an upward development. Both learn valuable and necessary lessons. They become better acquainted. The guiding principles of each become better known to the other, and with better knowledge comes increased respect. The employer learns that to concede a just point to an employee takes away nothing of his strength, rather adds to his assets a tangible value of trust, confidence and the willing work of a satisfied employee; and the employee more fully realizes the usefulness and justice of considering other than purely selfish motives in the pursuit of his hopes and ambitions, and that to consider the opposing viewpoint today means a stronger and better vision for his own tomorrow.

[ There can be no question about the desirability of industrial peace for Canada; it is more than that, it is a necessity. We want capitalists to invest their money in industries and enterprises, which will not come to pass if they are not given a full, fair and even generous return, and our need is equally great for loyal, willing workers to help these industries to grow and expand on a permanent enduring basis. It must be remembered that the standard of a nation rises or falls with the living standard of its workers, and the capitalist must realize that no constant, permanent success awaits his enterprise unless the other partner to the undertaking—the worker—receives, too, his full, fair and generous return for his toil that makes the venture successful, or as had been clearly stated, the where-withal to secure and maintain a standard of living as befits the dignity and honour of Canada. The interests are inseparable. Canadian industries will thrive and succeed in the measure of Canada's

growth and virility, and Canada's standard of growth and development is limited by the standard of living accorded to her workers. Canada, the home of liberty, the granary of the world, the beehive of industry, the doorway of tomorrow, Nature's bountiful storehouse, will never achieve her full status, will never enter into her full inheritance unless the homes of her workers are the home of a happy, peaceful, comfortable and contented people.]

#### Sense of Moral Obligation

Fortunately for us, this elementary fact is already recognized by many of our employers, and this alone is full of promise. [The strong compelling and propelling force that will bring about the cheerful co-operation of these two great interests is the sense of moral obligation, of responsibility to one's neighbour and one's own, of duty and loyalty to the State.] There are still some obstacles to be overcome before we may hope for full success, some bitterness and distrust still linger in the ranks of the toilers, a sense of injustice, of wrong sustained, and the future holds no greater achievement than to win their confidence and allegiance to the broader spirit. There is also, on the other side, that of the employer, the man whose money sways industries through investment channels, some who cling to old beliefs and practices. These we find, happily, at rare intervals, but their influence is at times far-reaching and their acts always deplorable. Their habitat is in the innermost realms of high finance; they are men who seldom, if ever, come in close personal contact with toil or the men who toil; their knowledge is limited to the columns of figures they control. Their official organs may be known by the zeal they display in

misunderstanding labour, in condemning any and all of labour's efforts—a fair, unbiased account of labour's domestic or public activities seems impossible to them. Their deity is invested capital, their pet monstrosity the evolution of the worker, and their helpmates are class-prejudice and discord. There is not one act of theirs inspired by such motives, but is a block to the progress of Canada, and the results do not stop there; their weapons must eventually rebound on themselves, to the detriment of the very industries to which they look for cent-per-cent returns on their investments. They thicken the fog which already enfolds them, and they reopen half-closed wounds in the breast of labour. Their attitude is unpatriotic, and in the last and final analysis is tantamount to treason to the State.

#### Not an Abstract Quality

[To them, and to those whose principles they voice, there is a word to be said: Open your eyes to the light. Never again in the history of mankind will workers in civilized nations return to their former status; never again will labour be manipulated as an abstract quantity, but as a living, human entity, to be dealt with man-to-man; an entity whose interests, aims and ambitions, when made akin to your own, will give you the only possible, enduring success. These are the two alternatives: to face one another as armed bandits, seeking a vulnerable spot to drive home a death-blow, or to meet on the ground of common interest actuated by principles of mutual respect and consideration, of give and take.] The first road leads to unrest, conflict, disaster for one or the other, certainly loss for both—the latter means confidence, trust, peace, progress and prosperity.

## "THE WORK OF THE INTERNATIONAL LABOUR OFFICE"

*Address delivered by Mr. Albert Thomas before the Canadian Club of Ottawa, on December 14, 1922.*

IN December last Mr. Albert Thomas, Director of the International Labour Office (League of Nations) at Geneva, visited points in the United States and Canada and delivered a number of addresses on some aspects of matters pertaining to the International Labour Office. On December 14, Mr. Thomas was the guest at a luncheon tendered him jointly by the Canadian Club of Ottawa and the Ottawa Branch of the League of Nations Society of Canada. A word as to Mr. Thomas' career before he became Director of the International Labour Office will be in place.

Before his appointment as Director of the International Labour Office in November, 1919, Mr. Thomas had had a distinguished career. Born in 1878 at Champigny-sur-Marne, he became a brilliant student leading his class in history and philosophy, and winning various scholarships. He obtained his degree at the University of Paris in 1900, and two years later he obtained a post graduate degree in history, winning a French state scholarship at the University of Berlin, where he made a special study of the Trade Union movement. After serving for a number of years as municipal councillor at his birth-place, he was elected to the Chamber of Deputies in 1910, and re-elected in 1914 and 1919. In the Chamber he took an important part in all industrial and social legislation, and during the war he was successively organizer of the railways for the general staff, under-secretary of state for artillery and munitions, and minister of munitions. In October, 1921, he resigned his seat in the Chamber of Deputies in order to devote himself exclusively to the work of the International Labour Office. Mr. Thomas is the author of a history of the Second Empire, and of many articles on social and economic questions which have appeared in the leading French periodicals.

Mr. Thomas' address in Ottawa was as follows:

Gentlemen:

Yesterday, in New York, I made my first English speech. As it was at a very small meeting, I was not over-nervous, and I spoke for nearly an hour. The audience, I hope, was not too tired, but I was very tired. To-day I am a little more diffident when I see at these tables so many high representatives of this country. I will, however, try to express in English my great pleasure in being here for the first time in the great Dominion of Canada.

The Chairman asked me for an explanation of our work in Geneva, and I will try to give you a short account of what we are doing and attempting to do. The International Labour Office, as you know, is a part of the League of Nations. We have certainly a great measure of autonomy, in that we have a special Governing Body and a special Conference; but the League of Nations is charged with the duty of voting our annual budget. I see here Sir George Foster. He was the *rapporteur* of the Budget of the International Labour Office at the First Assembly of the League of Nations, and I wish to express here and now our feeling of thanks to him. He is certainly very economical: he made certain criticisms of the expenditure of the League of Nations. But, if I may be allowed to quote our great national poet, Victor Hugo: "*Il était généreux quoiqu'il fût économe.*" And he was so friendly, so appreciative, towards our work that he

consented to propose the vote of our budget.

Our Organization has, as you know, two aims. The first is to pass, at the annual Conference, Draft Conventions or Recommendations for the purpose of raising the level of the conditions of work and life for the wage-earners of the world. In our Conference we have for each country four representatives,—two for the Government, one for the employers, and one for the workers. This year we had the pleasure of seeing at our conference Mr. Lapointe and Mr. Murdock. That is for us a great honour, for it is a sign of the great interest which Canada has in our work that it should send two Ministers as its representatives. We had also from Canada, as representative of the employers this year, Mr. Coulter, of Toronto, and last year Mr. Parsons, with a man who is sometimes rather severe towards the office, but is always a very good friend to us, Mr. Blake Robertson. On the side of the workers we have had, since the foundation of our Conference, Mr. Tom Moore, who is now sitting on the right of the Prime Minister of Canada—a fact that attests to us the great accord that exists between Government and workers in this country of Canada. (Applause.)

Our Conference votes Draft Conventions or Recommendations. Here begins the hard labour of the Director. Each country is free to ratify or not to ratify any Convention. Each country is obliged to bring a Convention before the authority which is competent to make the laws; but that is the only obligation. Each country is free. Its national sovereignty is respected. I also respect national sovereignty; but it is

often a great difficulty in the development of international affairs. It is sometimes quite legitimate to invoke national sovereignty, but frequently behind this idea of national sovereignty we have egotism, selfishness, and resistance to the new ideas of international peace. I am sure that in Canada I shall find only the pure idea of the sovereignty of the State. But it is not so everywhere, and because of that difficulty, because of the self-interest of countries, we see much opposition to our Conventions, and it is the duty of the Director of the International Labour Office to go from country to country to get a better public opinion, and better feelings on the part of Governments, in order to obtain ratification of our Conventions. Therefore the Director of the International Labour Office has become a permanent traveller—he has been called the Wandering Jew of social policy—for he is always going from country to country. But this is the first time that he has ever come to your land—to discover America, and discover the real friendship of Canada. (Applause.)

This afternoon, with the Prime Minister, if he allows, and with the representatives of the Ministry of Labour, we shall study the situation of Canada in connection with our Draft Conventions and Recommendations, the procedure which is to be followed, and the difficulties of ratification in a Federal State; for you have the right, as a Federal State, to enjoy the special facilities which are provided by the Treaty of Peace for such States.

To endeavour to bring about the ratification of our Draft Conventions is, as I have said, our first duty. I need

not point out the importance of such activity. After the war, many nations were interested in the question of raising the level of working and living conditions, not only in those countries which were in a state of revolution, but also in the victorious Allied countries. There was a feeling that after the great sacrifices of the war it was necessary to create a new era of justice and humanity. That was the origin of our Organization. But if only one or two socially progressive countries decide to give better conditions of labour, those countries are in danger of finding themselves in a less favourable situation in face of the trade competition of other countries, and it is the aim of our Organization to induce those other countries which may be less progressive socially to follow the example of justice and humanity and to ratify our Conventions. Our task is very heavy, because of the special interests of each country, and because of the jealousy of national sovereignty. I know some countries which have accomplished reforms for themselves, but which have not decided to enter into an international undertaking to maintain those reforms for ten years, as our Conventions require, having regard to the present situation of uncertainty for industrial employers and even for the workers.

However, we trust in the feeling of humanity and justice, and in spite of many and great difficulties we will carry on our work with full confidence. (Applause.)

I am especially encouraged by the presence here of the Prime Minister of Canada, who knows exactly the conditions which are necessary for the deve-

lopment of industry. Mr. Prime Minister, you have in your book, "Industry and Humanity," explained the opposition between the two laws of humanity which were described by our great savant Pasteur: the law of blood and death, ever imagining new means of destruction, and the law of peace, work and health, utilizing every means of human intelligence for the happiness and beauty of human life. (Applause.)

Our Organization has a second duty to accomplish. If we cannot immediately get the different countries to accept mutual obligations and to ratify our Conventions, it is still possible to create a new atmosphere of feeling, to suggest new ideas of reforms, to explain the initiatives and experiences of each country; and it is the second duty of our Organization to collect and distribute information concerning all labour matters and all social questions throughout the world. By so doing we hope to render good service to the life of each country.

I will give an example. The Government of South Africa proposed some months ago to create a system of insurance against unemployment. Two great countries in Europe have national insurance systems for combating unemployment—Great Britain and Italy. It would have been necessary, before our Organization was created, for the Government of South Africa to send an official investigator to learn the exact facts not only of the law, but also of the application of the law, in these countries; and it is expensive, especially for overseas countries, to send abroad such enquirers. Instead of this, our Office was asked by South Africa to supply the information it needed,

and we have sent to South Africa full particulars not only of the legislation on the subject, but also of the daily operation of the unemployment insurance systems in Great Britain and in Italy.

Another example: Great Britain is a country that has many means of collecting and distributing information. But it is often easier for an international institution than for an individual Government to ask other countries for information. Thus, when the Ministry of Labour in England was told that in Altona, Germany, there was a new system of organizing the unemployed for public works, Great Britain asked the International Labour Office to send an enquirer into Germany, and we did so. The data which we collect in this way are at the disposal not only of the country that asks for the information, but of all countries.

A last point. At the time of the great economies in England, at the time when Sir Eric Geddes used the axe, the British Minister of Labour was obliged to cut down expenditure, and he decided to substitute the publications of the International Labour Office for a rather expensive publication hitherto issued by his Department. That is an example which I would cite to all champions of economy and to the governments of all countries.

I have tried to explain as well as I could in English the work of our Organization; and now, with your permission, I will speak a little French. (Applause.)

(Translation)

Since it is in French you now allow me to speak, you will also allow me to

speak as a Frenchman, I mean with my Frenchman's heart and sentimentality. I come to Canada for the first time, as I said a while ago. I do not forget my character as an international official, and I find no difficulty in remembering it. You are here in a great country where our two races, after being in opposition to each other and fighting each other, have been reconciled for the common good of the State in which they found themselves; a country in which for scores of years, for hundreds of years, you have shown the possibility of creating between brothers of different races a living community, a community which does not forget that the *raison d'être* of any State, the *raison d'être* of any City, is to work for the common good of all the citizens therein gathered.

May I venture to say that in the small city we have the pleasure of administering in Geneva, we are working with the same feelings—a Franco-English city, with two official languages, French and English, compelling its Director to learn English at the age of 42 in order to be able to govern its personnel, but a city in which—I have a right to say so after an experience of three years—never, under any circumstances, did any thought of national susceptibility or self-conceit hit one or other, but where we always work for the great international task which has been entrusted to us.

It is not at the first meeting we have to-day that I could find out the—very sharp, I am told—differences which may exist between French-Canadians and the Frenchmen of the France of to-day. It appears there are in your language a

number of things which it will be difficult for me to understand, and that there are also English terms. It appears that sometimes you do not correctly appreciate the difficulties which the France of to-day has to meet. I want to talk about that. On all that I wish to be informed. But of one thing I am quite sure, and that is that I shall find myself heart to heart in a common enthusiasm, in a common wish for a better mankind, with my French brothers in Canada.

There may be some of the Thomas family in Canada. I may meet here some unknown and distant cousins who have left our groves of Poitou about the seventeenth or the eighteenth century. I may perhaps recognize at once the same sentiments in them. Perhaps even the political thought I carry with me has passed to a certain extent into their minds. I know that on this side of the Atlantic Socialists sometimes appear like frightful beings, incapable

of governing, incapable of working for the national happiness. It may be so. But I know that the mind of your people is conformable enough to all the principles of justice which Old and New France have in common at the present time, so that I may secure from them friendship and co-operation in the great work in which we are engaged.

Such is the disposition of mind with which I come to Canada to-day. I will repeat the words of our great scientist, Pasteur: spirit of peace, spirit of work, spirit of health for human society; a wish to respect the rights of all, a wish to conciliate them, a wish to form them into a better mankind. In this work, whatever difficulties may have to be overcome, the men who united during the war to secure the triumph of justice among the nations,—all these men will be united in order to co-operate in the great work of international society. (Applause.)

---

### ACTION OF VARIOUS COUNTRIES ON DRAFT CONVENTIONS AND RECOMMENDATIONS OF INTERNATIONAL LABOUR CONFERENCE

**T**HE legislative results obtained up to the present time by the International Labour Organization (League of Nations) are shown by the enactment of labour laws in various countries on the lines suggested at the first three sessions of the International Labour Conference, and by the ratification or approval in principle of international conventions covering the objects in view. It will be recalled that in regard to the draft conventions adopted by the Conference and later approved by

individual states, the latter are required under the terms of the Treaty of Peace to communicate to the Secretary-General of the League of Nations their formal adhesion or ratification; while in regard to the recommendations the only obligation assumed by the States is to communicate a report on such measures as may have been taken to give them effect. The subject matter of the recommendations being generally somewhat less specific in nature, wider

latitude is allowed to the member states in adjusting the principles involved to their special and individual conditions.

The number of ratifications of various draft conventions actually communicated to the League of Nations up to the end of November, 1922, was 62, while 15 other ratifications had been authorized by the competent authority, that is to say in most cases, by the national parliaments. These ratifications may be considered to be practically assured since the Executive authority which recommended them to Parliament has now been authorized to communicate them to the League of Nations. They are, therefore, included in the general total of ratifications as given in the tables below, which show in outline the action taken by the members in regard to each draft convention and recommendation. Among the more important countries which have already ratified certain of the draft conventions might be mentioned Great Britain, Japan, Austria, Denmark, Norway, Sweden, Roumania, Switzerland, Netherlands, India, etc.

The tables dealing with the conventions are subdivided into two parts; the first part indicates the measures taken for the ratification of the conventions; and the second part shows the legislative or other measures adopted, introduced, or prepared with the view to the application of the conventions.

With respect to the recommendations of the International Labour Conference, these are also arranged in tables below, from which it will be seen that 28 acts have been passed by various countries putting some of the recommendations into effect, and that approval has been authorized by different means in 11 other cases. In 52 other cases legislation along the lines of certain of the recommendations was already in force in certain countries prior to the adoption of the recommendations by the International Labour Conference. Among the more important countries where one or more of the recommendations are now in effect might be mentioned Great Britain, France, Germany, Austria, Italy, Norway, Sweden, Belgium, Netherlands, Switzerland, Spain, India, etc.

## ECONOMIC TEACHING AS AN AID TO INDUSTRIAL PEACE

The following interesting article, which deals with the matter of systematic instruction to workers in the economic principles underlying all trade and industry, is reprinted from *The Quebec Chronicle*, issue of November 24, 1922, where it appeared in the correspondence column under the signature of Bernard Rose, Montreal.

THE following and very apposite paragraph being part of an article on "The need for economic teaching," and contained in the October 21st issue of the "Spectator" of London, England, is in my opinion deserving of the widest publicity.

"The damage done to the country by industrial disputes, by slow and inefficient work grudgingly done, by unnecessary absenteeism, even by the psychological effects of discontent, could be enormously reduced if the employers on the one hand and the workers on the other could enter into each other's minds, realize exactly where the shoe pinches and sympathize with each other's difficulties and aspirations. Two things seem to be required; first, day-to-day information, accurate and unbiased, as to the conditions governing the state of trade and industry; and secondly but ultimately the more important of the two—systematic instructions in the principles underlying all trade and industry, especially international trade."

Nothing is ever lost by the fullest discussion of questions that concern alleged conflicting interests, and not only must the discussion be full in all that affects industrial relations, but sympathetic and reciprocal in tolerance of the views expressed.

As the writer states in another part of the same article: "In quiet and prosperous times, the study of economics seems to be useless." This is quite true. When business is good and work plentiful, neither the employer nor the worker is interested in a discussion of eco-

nomie principles. It is only as the writer also points out, when business is bad and the workers unemployed, that those interested in the welfare of both employer and employee seriously ponder over those matters and questions that affect the economic well-being of those who live by the labour of hand or brain.

Even the most advanced radicals, are commencing to realize, that the doctrine which has almost become a part of labour's creed, that lessened production is advantageous to the worker, is not only pernicious, but ruinous in its effects upon the worker and the country.

Elementary economic facts must be, not only taught, but emphasized so persistently and strikingly, that they will finally impress themselves upon the minds and influence the thinking of those who belong to the category of wage earners and who might otherwise be inclined to place too much reliance upon the affirmation of those who believe that all society's evils, economic and social can be cured by disruption, destruction, and reorganization in accordance with the ideas that have been propagated by an element in every community that is dissatisfied, and fanatically believes, that the overthrow of industry as at present existing, will bring about a millennium.

We must strive to make the workers and employer understand that not conflict, but co-operation, is essential to the welfare of both employer and employed. Even though the workers in a trade are organized they can still very effectively co-operate with the

employer in maintaining an output and efficiency, that will not only permit the paying of good wages, but also the meeting of competition, in obtaining orders, which keeps the man in the trade busily employed.

It has been said on scores of occasions, that where a country possesses resources, it can easily become self-sustaining and provide an abundance of employment, that will in turn make for a happy and contented working population, well paid and well housed.

It stands to reason that where the employer or the directors of the enterprise, are given loyal support by the workers, that this will affect the output and quality of goods manufactured, or service rendered.

It should be the aim of the enlightened employer and industrial director, whenever the slightest evidence is given of dissatisfaction on the part of the worker and he thinks he is not being properly dealt with, to at once, take the worker and his associates into the employer's or directors' confidence and endeavour to convince them beyond any doubt, that there is no reason for such dissatisfaction, and that the success of the enterprise depends upon the several factors, working together as a unit and with the determination to make it a success.

It is somewhat difficult at times to convince a large number of men. Their psychology may be affected to such an extent, that they cannot see things as impersonally and impartially as they would, if the worker was only one of a very small group, who met the employer, and who discussed with him freely and frankly, those grievances and suspicions, that if allowed to continue, embitter the relations between the employer and employed.

It is said that: "A soft answer turneth away wrath." The bulldozing method of talking to employees is not only resented by them, but serves no purpose. It enrages, rather than

soothes. The average workman, who has a heart to heart talk with his employer, who is willing to furnish him all the information he desires, and explain matters that seem somewhat difficult to understand or appreciate, becomes aware as a result of such information being furnished, that industry cannot be carried on nor can commerce function, in the way that he is told it would, if the present system of production was radically changed.

It is a duty developing upon the employer to educate his employees, either by talking to them himself, or securing some person or persons with a knowledge of industrial relations, and the psychology of the worker, and in whom he has confidence to have periodical meetings and talk of the matters, which are nearest to one's interest and heart. It is thus, that misunderstanding is done away with and grievances vanish.

He would learn something of the commercial structure of society in so far as it appertains to the physiology of production and the agencies that must be employed in order to dispose of it. The worker would also learn something of the relations between the banker and the employer. He would also be able to learn something of the trials and tribulations of the average manufacturer, who must not only be beholden to the banker, but must possess the foresight necessary to make purchases of goods, which are required in the carrying on of the industry and which goods when turned into saleable commodities, must then be disposed of to customers from whom orders are secured, by travellers to whom part of the selling price must be paid. He would then see how necessary co-operation is between these several factors, and how the lack of co-operation affects each in turn.

Canada is fortunately situated in being able to utilize any one or more of the several methods, that have been advocated and adopted, in connection

with the promoting of industrial peace, and the establishing of standards of production, and payment that is fair to the employer and employed, and yet permit the consumer to purchase what is manufactured at a reasonable price.

It must always be borne in mind, that the employer and the employed are both dependent upon the consumer. If the consumer is prosperous and willing to pay the reasonable price asked for the commodity offered, he keeps the wheels of industry moving, thus generating a feeling of content and security, that is absent when trade is bad

or employer and employed are not on the best of terms.

Industrial disputes are costly and constitute a loss of national wealth. Inefficient work and restricted output tend to bring about a state of mind, that is demoralizing to the worker and injurious to the employer and the community.

I think that it can be well said, that in everything pertaining to the relations of employer and employee, that honesty is not only the best policy, but the only policy to follow.

---

## ANNUAL REPORT OF THE LABOUR DEPARTMENT OF QUEBEC.

THE general report of the Minister of Public Works and Labour of the Province of Quebec for year ending June 30, 1922, includes the annual report of the Provincial Labour Department for the same period. The Department has been in existence for thirty-four years. It is now permanently installed at Montreal, suitable premises for its accommodation having been provided during the past year in buildings which also house the employment bureau. The report contains a brief survey of the conditions of labour in the Province, and describes the work accomplished during the year under review in the inspection of industrial establishments and public buildings, and in the prevention of industrial accidents. Further reports on the Fair Wages and Conciliation Branches of the Department are promised at the end of the fiscal year. The condition of labour in the Province at the end of June indicated, it is claimed, a gradual return to normal conditions. The Province of Quebec is especially subject to seasonal fluctuations in regard to employment, the closing of navigation during the winter months releasing many workers, especially at Montreal. Beyond this seasonal slackness there had also been a general industrial de-

pression for the past two or three years. At the end of June the clothing industry was almost normally active, the metal working industry was still seriously involved in the effects of the late crisis, while there was some hope of renewed activity in the lumbering industry. A feature of Employment Service work during the year was the hundred per cent increase which was recorded in the number of placements effected by the Women's Division. The report states with respect to the Employment Service of Canada that the Service "is very useful to the Government, it is appreciated by the employers and highly esteemed by the workers."

Good progress was made in the work of accident prevention in the industries covered by the Department's activities. But many occupations, as the report points out, lie outside the Department's sphere of action, the list of outside industries including important industries such as building and construction, farm work, lumbering, etc. Within these limits a marked improvement is reported in regard to the adoption of safety precautions in industrial plants, manufacturers showing more willingness than formerly to co-operate with the Department in this respect. During

the period under review the Department received reports of 15 fatal accidents, 76 serious and 729 slight accidents, the number of serious and fatal cases having been reduced by 48 and the slight cases having been increased by 137 over the preceding twelve months. In this connection the assistant chief factory inspector points out that "very often accidents happen during the first days and even the first hours after a machine has been entrusted to a newcomer." The same official reported that he was preparing a device which would protect workers making use of the "compressed air gun", a tool for rivetting bolts on steam boilers, iron frames etc. An important duty carried out by Department officials is the registration of children between the ages of 14 and 16 years desiring permission to work in factories or shops. The number of permits issued during the year was 14,600. Provisional certificates are issued for work

during holidays, these being cancelled when classes are resumed. They are mostly issued only at the expressed wish of the parents. The Deputy Minister suggests that in future it would be advisable to entrust to the school authorities the examination of children wishing for permits. "A certificate of study would", he thinks, "be the best passport for a child whose parents wish to send him to work in the factories."

During the year the factory inspector received a considerable number of requests from employers for permission for workmen to continue work outside of the regular hours, but permits were issued in only nine of these cases in which overtime work was really necessary.

The report calls attention to the almost total absence of serious industrial disputes in the Province during the year. Two disputes were settled by arbitration under the Municipal Strikes and Lockouts Act.

---

### MINIMUM WAGE LAW OF DISTRICT OF COLUMBIA DECLARED UNCONSTITUTIONAL BY COURT OF APPEALS.

THE Court of Appeals of the District of Columbia has recently delivered an important opinion, declaring unconstitutional the Minimum Wage law of the District of Columbia enacted by the United States Congress on September 19, 1918. The Act authorized the Commissioners of the District of Columbia to appoint a minimum wage board with power, after investigation and hearing, to fix the minimum wages of women employees in any occupation in the District. Penalties were provided for failure to pay the minimum wage. The Board issued an order requiring the Children's Hospital to pay its women employees \$16.50 per week or \$71.50 per month. It issued another order forbidding any hotelkeeper to employ a woman or minor girl for wages of not less than 34½ cents per hour, \$16.50

per week or \$71.50 per month. The Children's Hospital and a woman elevator employee who had been discharged from a hotel on account of the order of the Board filed bills to restrain the Board from enforcing its orders. The bills were dismissed by the Supreme Court of the District of Columbia and the plaintiffs appealed to the Court of Appeals.

The opinion of the Court of Appeals, delivered by Mr. Justice Van Orsdel, was in part as follows:

We are here called upon to weigh the subject matter of certain legislation in the balance of the Constitution, the general power of Congress to fix wage contracts between private individuals. If Congress may establish a minimum wage for women, it may establish a maximum wage, or it may name a fixed wage. If it may regulate wages for women, it may by the exercise of the same

power establish the wages to be paid men. The power of Congress to fix wages between private individuals is either constitutional or unconstitutional. There is no leeway for legislative or judicial discretion. A fundamental principle is involved; and it does not lie in the courts to declare a law fixing the wages of women constitutional and a law fixing the wages of men unconstitutional.

This leads to another angle. If the law is to be equitably enforced, it requires a most careful and judicious inquiry by the board into living conditions—the cost of rent, clothes, food and recreation. In no other way can justice be accorded. The wage fixed for an employer to pay his employee cannot be justified if based upon the unrestrained prices which the employee may have to pay the merchant for food and clothes, or the landlord for rent. The logical result of such a course relegates the whole matter of prices to the realm of legislation. . . .

The public safety and welfare may justify the legislature in limiting the hours of labour in mines and other hazardous industries, and require safeguards to be employed in conducting dangerous occupations. Such regulations, however, affect only the mode of operation and do not invade the domain of prices. They are easily distinguished from the purely economic question of how much the employer shall pay the employee for his services. In one case the business conducted is so inherently dangerous that its regulation, as to methods of operation, becomes a valid exercise of the police power. The public health and safety demand, not that the business be confiscated, not that proprietorship therein be curtailed or limited, not that the economic control thereof may be in the least affected, but that the business be so conducted that the public health and safety may not be seriously endangered.

Legislation tending to fix the prices at which private property shall be sold, whether it be a commodity or labour, places a limitation upon the distribution of wealth and is aimed at the correction of the inequalities of fortune which are inevitable under our form of government, due to personal liberty and the private ownership of property. These principles are embodied in the Constitution itself, and to interfere with their freedom of operation is to deprive the citizen of his constitutional rights. In other words, regardless of public sentiment or popular demand, such a radical change, if deemed necessary, should not be accomplished by legislative enactment or judicial interpretation, but by way of amendment in the orderly way provided. . . .

The police power cannot be employed to level inequalities of fortune. Private property cannot by mere legislative or judicial

fiat be taken from one person and delivered to another, which is the logical result of price-fixing. . . .

But it is suggested that the act may be sustained, since Congress is legislating for a class. . . . No reason is apparent why the operation of the law should be extended to women to the exclusion of men, since women have been accorded full equality with men in the commercial and political world. Indeed, this equality in law has been sanctioned by constitutional amendment; and so fixed has the tendency in this direction become established in English-speaking lands, that the opportunity for official and business preferment, upon complete equality with men, is limited only by the scope of her aspirations.

The right of Willie Lyons to contract her labour in any lawful calling is a property right, of which, if the property clauses of the constitution mean anything, she cannot be deprived. When the minimum wage of \$71.50 per month for women was fixed by the board in this District, Willie Lyons was operating an elevator in the Congress Hotel at a wage of \$35 a month and two meals per day. As a result she lost her position. The law worked but one way. The hotel manager was not compelled to employ her at a fixed wage, and her position went to a man, who was willing to perform the service at a lower wage than that fixed by the Board. She was without the power to compel her employment, and, because of her inability to measure up to the minimum scale, the law to promote the good morals and general welfare of the community cast her adrift. She was not even in a position to avail herself of the provisions of section 13, of the act, since she was fully qualified to perform the work for which she was employed. Her earning capacity as an elevator operator, was not "impaired by age or otherwise." The only way, therefore, by which she could have been saved from competitive injury would have been to have fixed the minimum wage of elevator operators at \$32.50 per month and two meals per day. Unless, therefore, the board is to be accorded arbitrary power, section 13 has no application to her case.

The sacredness of the right of the citizen to freely contract his labour was upheld in *Adair v United States*, 208 U.S., 161, 174, where the court, speaking through Mr. Justice Harlan said "The right of a person to sell his labour upon such terms as he deems proper is, in its essence, the same as the right of the purchaser of labour to prescribe the conditions upon which he will accept such labour from the person offering to sell it. . . . In all such particulars the employer and the employee have equality of right, and any legislation that disturbs that equality is an arbitrary interference with the liberty of

contract which no government can legally justify in a free land.'". . .

We are of the opinion that the act can not be upheld upon the theory that the contracting for labour between private individuals is a business impressed with a public interest. Unlike the operation of an elevator to handle indiscriminately the grain of the public, and the rates to be charged for such service. . . . we are here dealing with a private business, conducted between private individuals, in which the public has no direct economic interest. It follows, therefore, that if the doctrine of "public interest" is to be extended to the point of fixing by law the rate at which the individual citizen may contract his labour, by placing a limitation upon the freedom of private contract between employer and employee, it is difficult to understand just where the limitations of the extension of police power may be reached. It amounts to converting the police power into a convenient experimental agency for distinguishing, extending or abrogating express limitations of the Constitution.

Coming now to the consideration of the vindication of the act as a proper exercise of the police power, we are of the opinion that it cannot be upheld. High wages do not necessarily tend to good morals, or the promotion of the general welfare. The standard of virtue and morality is no higher among the prosperous than among the poor. Their worth cannot be measured in dollars and cents, or promoted by a legal subsidy. Never have wages been so high as since the outbreak of the late war, and never in the history of the republic has crime been so universal; and this condition, it must be conceded, has made a like unfavourable impression upon the morals of the people. A wage based upon competitive ability is just, and leads to frugality and honest industry, and inspires an ambition to attain the highest possible efficiency, while the equal wage paralyzes ambition and promotes prodigality and indolence. It takes away the strongest incentive to human labour, thrift and efficiency, and works injustice to employer and employee alike, thus affecting injuriously the whole social and industrial fabric. Experience

has demonstrated that a fixed minimum wage means, in the last analysis, a fixed wage; since the employer, being compelled to advance some to a wage higher than their earning capacity, will, to equalize the cost of operation, lower the wage of the more competent to the common basis. . . .

No greater calamity could befall the wage earners of this country than to have the legislative power to fix wages upheld. It would deprive them of the most sacred safeguard which the Constitution affords. Take from the citizen the right to freely contract and sell his labour for the highest wage which his individual skill and efficiency will command, and the labourer would be reduced to an automaton—a mere creature of the state. It is paternalism in the highest degree, and the struggle of the centuries to establish the principle that the state exists for the citizen, and not the citizen for the state, would be lost.

If in the exercise of the police power for the general welfare, power lies in the legislature to fix the wage which the citizen must accept, or choose idleness, or, as in the case of Willie Lyons, be deprived of the means of earning a living, it is but a step to a legal requirement that the industrious, frugal, economical citizen must divide his earnings with his indolent worthless neighbour. The modern tendency toward indiscriminate legislative and judicial jugglery with great fundamental principles of free government, whereby property rights are being curtailed and destroyed, logically will, if persisted in, end in social disorder and revolution. Let no one imagine for a moment, that our civilization is such that property rights can thus be socialized without the grossest abuse of the privileges granted, or that the restraint of the abuses can be left with safety to legislative or judicial discretion.

By judgment of the Court, Mr. Chief Justice Smyth dissenting, the decrees were reversed with costs and the causes remanded for further proceedings, not inconsistent with this opinion.

## BRITISH MINES DEPARTMENT REPORT FOR 1921.

ACCORDING to the Annual Report of the Secretary of Mines of Great Britain for the year 1921, (H. M. Stationery Office. Price 6s. 6d. ex postage) the quantities of the various classes of minerals raised or quarried (exclusive of the produce of quarries less than 20 feet deep) in the United Kingdom (and in the Isle of Man) in each of the years 1913, 1920 and 1921, are as follows:

	1913 Thou- sand Tons	1920 Thou- sand Tons	1921 Thou- sand Tons
Coal .....	287,430	229,532	163,251
Lead Ore and Ironstone .....	15,997	12,707	3,478
Lead Ore, dressed .....	24	15	7
Tin Ore, dressed (black tin) .....	8	5	1
Zinc Ore, dressed .....	17	5	1
Other Non-ferrous Ores .....	14	24	3
China Clay and China Stone .....	905	851	471
Fuller's Earth .....	32	29	20
Gypsum .....	285	287	265
Oil Shale .....	3,280	2,843	1,867
Potter's Clay .....	236	163	158
Salt .....	2,248	2,158	1,383
Other Minerals, for chemical and allied industries .....	163	158	74
Chalk .....	4,853	3,747	3,434
Chert, Flint, etc. ....	75	84	46
Clay and Shale .....	10,135	8,021	8,351
Fireclay .....	2,586	1,966	1,353
Gravel and Sand .....	2,409	2,757	2,490
Igneous Rock .....	7,098	5,621	5,740
Limestone .....	12,741	11,228	7,336
Ganister .....	312	310	151
Sandstone .....	3,666	1,874	1,885
Slate .....	371	215	237

The amount of natural gas produced in these years was 87,000 cubic feet in 1913, 95,000 cubic feet in 1920, and 100,000 cubic feet in 1921. The total value at the mine or quarry of all the above minerals except natural gas, and (in 1913 and 1921) uranium ore, was £160,113,000 in 1913, £427,445,000 in 1920, and £231,681,000 in 1921. Coal accounted for more than nine-tenths of the value of all minerals, namely, for £145,536,000 in 1913, £396,872,000 in 1920, and £213,746,000 in 1921.

### NUMBER EMPLOYED.

The total number of persons ordinarily employed at mines in Great Britain and Ireland (with the Isle of Man) during 1921 was 1,156,938, of whom 924,629 worked underground, and 232,309 on the surface. The number employed at quarries under the Quarries Act was 69,979. At coal mining, there were 1,131,587 persons employed in 1921 as compared with 1,226,885 in 1920; in 1921, 908,066 persons were employed underground, of whom 41,074 were under 16 years of age, and 223,521 were employed above ground, of whom 677 were under 14 years of age and 17,065 between the ages of 14 and 16 years. In 1920, there were 53,221 males under 16 years of age employed underground, and 4,648 under 14 years of age and 18,114 between the ages of 14 and 16 years employed above ground. Of the total employees above ground there were 6,086 females employed in 1921 as compared with 8,223 in 1920.

### ACCIDENTS.

During 1921, there were 815 persons killed at the mines and quarries, and 90,121 injured and incapacitated for more than seven days, which was 369 and 31,940, respectively, less than in the previous year. It is mentioned, however, that in 1921 work was suspended at the coal mines for three months during which time the miners were not exposed to the risks attending their occupation. Particulars of the accidents at mines (excluding quarries) are given as follows:

	Persons killed		Persons injured	
	1920	1921	1920	1921
Underground accidents—				
Explosions of firedamp or coaldust.....	26	19	107	50
Falls of ground.....	559	386	41,562	31,082
Shaft accidents.....	42	27	526	612
Haulage accidents.....	237	170	29,111	17,575
Miscellaneous .....	126	88	26,300	22,701
Total (underground).....	990	690	107,606	79,020
Surface accidents—				
On railways, sidings or tramways .....	54	41	2,982	2,110
Elsewhere .....	86	37	7,902	5,788
Total (surface).....	140	78	10,884	7,898
Total of all accidents	1,130	768	118,490	86,888

The report shows that there has been a great reduction in the accident death-rate in mines during the last half century and draws attention to "a very striking decrease in the number of accidents due to explosions and to shaft accidents, for the prevention of which much has been done by research and regulation, and an improvement, less

marked, in the number of accidents due to falls of ground, in the prevention of which, though many are, of course, unavoidable, personal care plays a predominant part. On the other hand, no improvement is evident in the number of accidents on haulage, an operation in which safety depends far more on the personal factor than on regulation, and in which the work of the individual is not open to close supervision. It is possible that not enough attention has been devoted in the past to improvements in haulage, as being a less obvious source of accidents; but ultimately the responsibility rests with the individual; and, in order to bring this fact home, the Department is taking preliminary steps . . . toward the promotion, throughout the coalfields, of a 'Safety First' movement."

The report shows that the Miners' Welfare Fund, at the end of 1921, had a net amount of over \$460,000 to its credit.

### THIRD NATIONAL CONGRESS OF THE CO-OPERATIVE LEAGUE OF THE UNITED STATES.

THE growth of the Consumers' Co-operative Movement in the United States was shown at the Third National Congress of the Co-operative League, which was held at Chicago, Ill., on October 26, 27 and 28. There were present seventy delegates of constituent societies from sixteen different states and thirty fraternal delegates besides representatives of labour organizations and a number of individuals interested in co-operation. Dr. J. P. Warbasse, president of the Congress occupied the chair.

A model state co-operative law was submitted by the committee on Co-operative Legislation and was approved by the Congress with a recommendation that the procedure outlined by the Committee on Legislation for promoting the model law be followed.

Mr. W. C. Lansdon, National Organizer of the Farmers' Co-operative and Educational Union of America reported that the farmers of the United States were now marketing five billion dollars worth of their products through their own organizations, and were supplying themselves co-operatively with over \$100,000,000 worth of farm machinery, clothing and other necessities.

Mr. Warren S. Stone, Grand Chief of the Brotherhood of Locomotive Engineers, announced that within ninety days a co-operative bank would be established for the first time in New York City. Mr. Walter F. McCaleb, former manager of the Brotherhood Co-operative Bank, presented a report on co-operative labour banks. He stated that the locomotive engineers had opened their bank at Cleveland in Novem-

ber, 1920, with resources of \$650,000, and within two years the resources had grown to \$19,000,000. This bank limits the profit of shareholders to 10 per cent, the balance of the available net profits being returned to depositors. It was claimed that this bank paid its depositors a higher rate of interest than any other bank in Cleveland. In a report on the development of credit unions (co-operative savings and loan societies) it was stated that were now eighty-six in New York, which in 1921 had total resources amounting to \$4,445,297, making loans of \$3,904,583 during the year. In Massachusetts there were 82 credit unions at the end of 1921 with total resources of \$4,047,172 and total loans to members of over \$3,003,765.

Particulars were given of various special forms of co-operative enterprise. "Our Co-operative Cafeteria" established in New York City, has a membership of 1,000 mostly women, and is conducting three branches with a turnover of \$300,000 a year. The manager of the Franklin Co-operative Creamery of Minneapolis told how locked-out milk drivers had helped to organize this dairy which is now owned and controlled by 6,000 consumers. It had cut the price of milk from thirteen cents to ten cents a quart, and in a year and a half from its formation it was supplying \$1,500,000 worth of dairy products annually. It was claimed that owing to the improved quality of milk which it sold deaths from typhoid were practically wiped out and the infant mortality rate was greatly lowered. The surplus savings of the dairy are given back to the patrons. Co-operative dairies have also been organized at Waukegan, Ill., and at Cleveland, Ohio.

The report of the Committee on Co-operative Housing contained an ac-

count of the Co-operative Housing Society of Milwaukee. This is said to be the first attempt on a large scale by an American municipality to meet the housing crisis on a strictly co-operative basis. The enterprise was financed by loans from the city, the country and individuals. Twenty-eight acres of land were bought, on which ninety homes were built. Nine hundred applications were received from prospective co-operative tenants. Tenant members buy shares in the association up to the value of the property they are to occupy. They obtain a perpetual lease but do not have title to the property. The rent paid is used to defray the actual operating costs, and to retire the preferred stock held by those who furnished the capital for the housing society.

In the report of the Committee on Spurious Co-operatives it was established that at least \$15,000,000 had been lost to workers in the United States during the past three years through the operations of false co-operative societies which were in reality nothing but stock-selling schemes.

Resolutions were passed by the Congress advocating that preference be given vo-operatives to union label goods, creating a committee to raise \$50,000 among trade unionists and farmers for the promotion of co-operation, recommending the establishment of co-operative schools throughout the country, appointing a committee to work in harmony with the Workers' Educational Bureau, and recommending to state federations of labour the appointment of authorized co-operative advisers whose qualifications would be passed upon by the Co-operative League.

## NEW GERMAN EMPLOYMENT EXCHANGE LAW

---

**A**N act passed on July 22, 1922, and in force from October 1, 1922, establishes in Germany a national system of local employment offices co-ordinated and supervised by state employment offices under the supreme control of the Employment Department of the Federal Ministry of Labour.

Offices administered by the local authorities are directly responsible for the placing of labour, and every commune must be served either by an office of its own or by a neighbouring exchange. Each local office may establish special sections to deal with particular classes of workers and similar sections may be established in the state offices and in the Federal Employment Department. No fees may be charged either to employers or workers. No office may supply labour, if the conditions conflict with those of an existing collective agreement of which the office has knowledge, or if the wages offered are below the minimum current rate for the locality. In other respects the office is to abstain from any action which may influence the level of wages.

Employers are required, and associates of workers have the right, to notify an exchange of the beginning or end of an industrial dispute, and when a dispute is notified the office must inform applicants of its existence.

The state employment offices and the Federal Employment Department will act as clearing houses. In addition to supervising the state offices the Federal Employment Department is to publish regular reports on the labour market, employment exchange statistics, the extent of unemployment, la-

bour disputes, collective bargaining and labour organization. In order to carry out this function the Department is given the right to demand adequate information on these matters.

To assist in the administration of the employment office system, committees are to be established in connection with each local and state employment office, and an administrative council in connection with the Federal Employment Department. Employers and workers will be equally represented on these bodies. Local authorities are to be represented on the state committees, and public administrative bodies (communes, communal unions and states) on the administrative council.

Non-commercial private employment offices are to be supervised by the state offices and may be taken over by the national system on request of the persons maintaining them. Under certain conditions a state office or the Federal Employment Department may demand the transfer or closure of any such private office. Private employment offices operated for profit are prohibited as from January 1, 1931, and no new permits may be granted after October 1, 1922. The business of existing commercial offices is to be supervised by the public offices set up under the new act.

The Federal Minister of Labour may require employers to notify vacancies to the local office where such vacancies are for workers subject to sickness insurance. This obligation, however, will not apply to vacancies in agriculture or domestic service or to those in establishments employing less than five workers.

## EMPLOYMENT OFFICE REPORTS FOR NOVEMBER, 1922

THE reports from the offices of the Employment Service of Canada for the month of November, 1922, indicated a decrease in the volume of business as compared with the preceding period, but an increase when compared with the corresponding month of 1921. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, shows a sharp decline during the first half of the month as a reaction from the abnormal increase noted in October, followed by a slight decrease during the latter weeks. The number of vacancies notified by employers to the Service averaged 1,156 and 1,101 daily during the first and second half of November respectively, as compared with 958 and 831 during the same periods a year ago. Vacancies reported during the latter half of October averaged 2,600 daily. Applications for employment registered at the offices declined from a daily average of 2,913 during the latter half of October to an average of 1,658 during the first half and 1,611 during the second half of November. The average number of ap-

plications reported daily during the same period in November, 1921, was 1,407 and 1,501 respectively. The offices of the Service effected an average of 1,111 placements during the first half of November, as compared with an average of 2,445 during the latter half of October and with an average of 802 during the same periods of November, 1921. During the latter half of the month placements averaged 999 daily as compared with 709 during the same period in 1921. During the month under review the placements in regular employment averaged daily 838 and 745 respectively, while the daily placements in casual work averaged 274 and 254. The following table presents the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months)....	268,001	37,904	305,905
1920 .....	366,547	79,264	445,811
1921 .....	280,518	75,238	355,756
1922 (11 months)....	283,856	88,722	372,578

During the month of November, 1922, there were 42,494 applications for employment registered at the offices, of which 33,788 were from men and 8,706 from women. Employers notified the Service of 29,337 vacancies, of which 21,768 were for men and 7,569 for women. Persons referred to employment during the month numbered 29,226, while a total of 27,445 placements were effected. Of the placements 20,586 (17,988 men and 2,598 of women) were in regular employment and 6,859 in casual work.

Placements in regular employment by provinces during the period were as follows: Nova Scotia, 383 men, 109 women; New Brunswick, 461 men, 82 women; Quebec, 1,082 men, 418 women; Ontario, 8,871 men, 736 women; Manitoba, 2,255 men, 419 women; Saskatchewan, 2,452 men, 287 women; Alberta, 1,112 men, 330 women; British Columbia, 1,372 men, 217 women.

#### MARITIME PROVINCES.

The demands in the construction group decreased slightly during the month owing to unfavourable weather, although a few workers were required for road, bridge and sewer construction. At Halifax few skilled building mechanics were unemployed, while at St. John carpenters, plasterers and plumbers were in demand. There was an increased number of casual jobs offered at Halifax, St. John and Moncton. Improvement was reported in the logging industry, and vacancies for choppers, pulpwood cutters, teamsters and camp builders were filled in large numbers from Amherst, New Glasgow, Chatham, Moncton and St. John. At the two latter offices several miners were in demand.

#### QUEBEC.

In Quebec Province little activity was reported in the construction group, a small demand for labour for street and road work being received in Montreal and Quebec. There was an in-

creased number of placements of experienced bushmen, for the camps both in the province and in Northern Ontario. In Montreal a number of factory workers and skilled mechanics were registered, but there was little demand in the manufacturing group.

#### ONTARIO.

Slackness in the demand for farm labour was indicated by the reports, but in Western Ontario, particularly Toronto, Hamilton, London and St. Thomas, a few orders for workers for the winter were received. Operations in the construction group were slightly curtailed due to colder weather, and numbers of unemployed tradesmen were registered at the offices. There were several requests for carpenters, painters and bricklayers, at Kitchener, Sarnia, St. Thomas, Kingston and Windsor, and no difficulty was experienced in meeting the demands. Powerhouse and dam construction employed a number of workers at Timmins, Cobalt and North Bay, while at Peterborough and Kingston, a few labourers were required for road work. Tracklaying and maintenance work for electric and steam railway companies provided work for many at Toronto, London, Guelph, Windsor and Port Arthur, but on the whole a decrease was reported in the demand for outside workers. Considerable activity was shown in the logging group, and bushmen were sent in large numbers to the camps in the northern part of the province from the offices at Ottawa, Pembroke, Cobalt, Timmins, Port Arthur and Toronto. In the manufacturing group very few demands for workers were received. At Windsor and Toronto, there were a few calls for tool grinders, tool and die makers, moulders and machine operators, while at St. Thomas, boilermakers and machine shop operators were required. Women workers were in demand in the cotton mills, knitting and glove factories at Kingston and London and in the shoe factories at Toronto. Longshore work was fairly brisk, especially at Sarnia, while at Port

## REPORT OF EMPLOYMENT OFFICES FOR THE MONTH OF NOVEMBER, 1922.

OFFICES	VACANCIES		APPLICANTS					Regular placements same period 1921

\* 2 placements effected by extension office since closed.

Arthur and Fort William vacancies for freight handlers and grain shovellers were filled without difficulty. There was a continued call for women household workers, but trained workers of this class were not available.

#### MANITOBA.

The demand for farm workers remained approximately as previously reported, the requirements being mostly for workers for the winter months. There was a decrease in the vacancies in this group at Winnipeg, while the office at Brandon reported an unusual demand for so late in the season. In the construction groups the demand was adversely affected by weather conditions. Building was almost at a standstill and very few vacancies were offered for labourers and road work. At Winnipeg several elevator and concrete form carpenters were placed, and at Dauphin and Portage la Prairie casual jobs of a seasonal nature provided work for a few. No difficulty was experienced by the offices in placing numbers of men in work in the lumber camps. From Brandon, Dauphin and Portage la Prairie workers were sent to the northern parts of the province, and from Winnipeg several gangs were sent to the camps in Northern Ontario. From the latter office 54 muckers were transferred to employment at the nickel mines near Sudbury, Ontario.

#### SASKATCHEWAN.

The demand for farm workers in this province fell off considerably during the month as compared with the large number of calls in this group during October. Farmers in the southern part of the province seemed to be supplied with all the workers they required. Slackness in demand was shown in the construction group although on the whole very few building tradesmen were unemployed. From Regina and Saskatoon a few carpenters and building labourers were placed, and at Estevan and North Battleford several

teamsters were required. Vacancies for ground men and telegraph workers, in addition to the calls for extra gang and section workers, were received and filled at the offices at Moose Jaw, Regina and Saskatoon. In the logging industry employment was afforded to numbers of men sent from the offices at Moose Jaw, North Battleford, Prince Albert, Regina and Saskatoon to the camps north of Prince Albert. A few experienced coal miners were required at Estevan, but the demand was not great. Requests for household workers were fairly numerous, although the calls for farm domestics had fallen off considerably.

#### ALBERTA.

There was a further decline in the demand for farm workers, only a few placements being effected in Calgary, Edmonton and Drumheller. In the construction group no heavy demands for labour were received, but the offices reported that on the whole there was little unemployment. At Lethbridge several teamsters and labourers were placed on irrigation work, although it was expected that colder weather would delay further proceedings. Few calls for bushmen were received as yet, but from Edmonton several workers were placed.

#### BRITISH COLUMBIA.

The offices reported a contraction in the volume of employment afforded in the construction groups and numbers of building labourers and tradesmen were registered at the offices. Some carpenters and labourers were in demand at Vancouver, Cranbrook and New Westminster, while at Kamloops a few workers were required for railway maintenance and construction work. Opportunities for employment in the lumber camps increased slightly during the month and numbers of bushmen and tiemakers were placed from Cranbrook, Prince George, Prince Rupert and Vancouver. Continued ac-

tivity was reported in the sawmills and a few vacancies were received for mill labourers and yardmen at Cranbrook, Kamloops and Vancouver. There was a slightly increased demand for women day workers at Vancouver and Victoria and placements were effected without difficulty. Resident household workers were required in approximately the same volume as formerly with a slight shortage of applicants.

#### The movement of Labour

The offices of the Employment Service of Canada reported that 20,586 placements were effected in regular employment during November, 1922, of which 8,661 were of persons for whom the employment found was outside the immediate vicinity of the office at which they were registered. Of these latter, 3,726 benefited by the Employment Service reduced transportation rate, 2,544 going to points within the same province as the despatching office and 1,182 to points in other provinces.

The offices in Quebec Province issued 288 special transportation vouchers, 11 of which were to bushmen going to lumber camps in the northern part of the province and 277 to persons, mainly lumbermen, going to points near Sudbury, Sault Ste. Marie and Iroquois Falls, Ont. The number of workers travelling from Ontario at the special rate was 1,093, of whom 4 were bushmen going to camps in the vicinity of Hull, Que. Of the 1,089 provincial transfers the greater number were bushmen and tie makers going to points near Sudbury, North Bay, Timmins, Sault Ste. Marie and Cobalt. One carpenter and one bricklayer were transferred from Sault Ste. Marie to Cobalt. A tinsmith travelled from Toronto to Cobalt, an electrician from Sault Ste. Marie to Oshawa, and farm hand and cook from Toronto to a point near Windsor, Ont.

Manitoba offices granted the special rate to 1,063 persons, 230 of whom were going to points within the province and 833 to other provinces. Of the provincial transfers 99 were bushmen going to points north of Dauphin and the remainder were farm workers and labourers going to various stations in the province. The interprovincial transfers included 26 farm hands going from Winnipeg to points in Saskatchewan. Of the 807 workers sent to points in Ontario more than 740 were bushmen destined to points near Port Arthur, 54 were muckers for the mines near Sudbury and a few were household and institutional workers going to different points in the province. The offices in Saskatchewan issued certificates to 991 workers, 939 of whom, chiefly bushmen, a few farm hands and miners, were going to points within the province. Of the 52 persons going to other provinces, 5 were bushmen going to Sault Ste. Marie, Sudbury and Port Arthur, Ont.; 47 were lumbermen and bushmen going from Regina, Saskatoon and Prince Albert to Bowsman, Dauphin and Winnipeg, Man. Alberta offices despatched 153 workers, chiefly miners, bushmen, teamsters, and a few farm hands, to points within the province. In addition 5 farm workers were sent from Edmonton to stations in Saskatchewan. From British Columbia 11 boilermakers and riveters were transferred to Calgary, Alta. Bushmen, loggers, and sawmill men sent to the camps in various points in British Columbia numbered 122.

Of the 3,726 workers who benefited by the Employment Service reduced rate 2,370 were carried by the Canadian National-Grand Trunk Railways, 1,318 by the Canadian Pacific Railway, 37 by the Temaskaming and Northern Ontario Railway, and 1 by the Pacific Great Eastern.

THE EMPLOYMENT SITUATION DURING NOVEMBER, 1922, AS REPORTED BY EMPLOYERS.

ACCORDING to reports tabulated by the Dominion Bureau of Statistics, the volume of employment as reported by employers at the end of November showed a small contraction from the previous month, indicating chiefly seasonal curtailment of operations in the out-of-door industries. This decline in employment, which is the first to be recorded since April, was very much less extensive than that registered during the corresponding period of 1921, and the situation generally was decidedly more favourable than at that time. The curve in the accompanying chart shows the slightly downward movement that employment manifested at the close of November, as well as the steadily upward trend indicated during the preceding seven months. The improvement over the corresponding period in 1921 is also illustrated.

Statements were tabulated from 6,369 employers with an aggregate payroll of 794,337 persons, of whom 780,950 were actually at work at the close of November, as compared with 787,580 on October 31. The index number, which is based on the number of employees at work, therefore declined slightly from 95.8 on the latter date to 95.2 for the period under review. At the end of

November, 1921, it had stood at 87.2. The most decided gains as compared with the preceding month were reported in logging; shipping and stevedoring and retail trade also recorded considerable improvement. Employment in the manufacturing industries on the whole showed only a slight change, the tendency, however, being upward. Important increases in the iron and steel industries more than counterbalanced heavy decreases in sawmills. The construction division suffered considerable losses, also of a seasonal character, those in railway construction and maintenance being especially pronounced. Steam railways employed smaller working forces than in October, as did also street and electric railways. Employment in coal mining moreover declined to some extent.

Reductions in personnel were reported by concerns in Ontario, the Prairie Provinces and British Columbia; those in the first named being comparatively small while in the other districts they were large. This shrinkage was of a general character, although the declines in construction and maintenance in each district were particularly heavy. In the Maritime Provinces and Quebec the tendency was upward; the

gains in the latter province provided work for nearly 2,800 workers, an increase in staffs of 1.4 per cent. The improvement was chiefly due to increased activity in car shops, logging camps and about the ports. In the Maritime district steel furnaces and rolling mills were decidedly busier. That conditions in all districts continued to compare favourably with those indicated during the corresponding month of last year may be seen from the following table of index numbers:

District	Relative weight	Nov. 30 1922	Oct. 31 1922	Nov. 30 1921
Maritime Provinces....	8.6	92.1	91.7	89.5
Quebec and Ontario....	69.4	94.2	94.0	85.1
Prairie Provinces.....	14.0	101.5	105.0	95.6
British Columbia.....	8.0	95.6	100.2	88.9
Canada .....	100	95.2	95.8	87.2

Firms in Montreal registered considerable improvement during November, largely in longshoring work, in an effort to clear up the harbour before navigation closed. Additions to staffs were also recorded in railway car, glass and leather factories. The employment afforded on street railways, in road construction, and in garment and sugar factories declined. Statements were compiled from 767 concerns in that city with an aggregate working force of 108,288 persons as compared with 105,681 employees on October 31, an increase of over 2 per cent. In Toronto the tendency was upward also, although the gains were less extensive. Eight hundred and eighty-six employers indicated a combined staff of 110,106 persons, or 894 more than in the last report. Retail trade was decidedly more active than in October; and the iron and steel industries generally showed a more favourable situation. On the other hand, garment factories, building and the street railways were slacker. In Ottawa reductions in personnel in sawmills and in construction caused employment in the city to show a decline. Returns were compiled from 132 employers having 11,903 persons on their staff as compar-

ed with 12,051 at the close of the preceding month, a contraction of approximately 1 per cent. A slightly upward movement was noted in Hamilton where railway car shops, electric current and rubber plants were busier. The gains however were largely offset by shrinkage in employment in construction. A combined working force of 27,026 persons was reported by the 215 firms making returns, who had employed 26,986 workers on October 31. In Winnipeg considerable additions to staff in retail houses were offset by losses in the construction industries and to a small extent in manufacturing. The 401 concerns reporting employed 28,637 persons as compared with 28,690 in October. Contractions on a larger scale were recorded in Vancouver where 651 persons were released by the 261 concerns reporting. Their total payroll aggregated 20,209 workers as compared with 20,860 employees on October 31. The greater part of this reduction occurred on street railways and cartage, in water transportation and in construction. The following table shows the index numbers of employment in these cities as at the end of October and November, 1922:—

City	Relative weight	Nov. 30 1922	Oct. 31 1922
Montreal .....	13.9	94.7	92.6
Toronto .....	14.1	92.9	92.2
Ottawa .....	1.5	98.6	100.6
Hamilton .....	3.5	88.2	88.4
Winnipeg .....	3.7	97.8	99.5
Vancouver .....	2.6	90.7	94.9

#### The Manufacturing Industries.

Varying conditions in this division resulted in a small net increase being shown. Car shops, rolling mills and steel furnaces were considerably busier, and increased activity, on a smaller scale was apparent in the leather, rubber, glass, brass, bronze and copper groups. On the other hand, sawmills continued to register heavy seasonal contractions; canneries and starch, garment, tobacco and petroleum factories also were slacker. Reports were

compiled from 4,156 manufacturers with an aggregate working force of 433,551 persons as compared with 433,373 on October 31, an increase of 178 persons only. Employment in the manufacturing division was considerably more active than during November, 1921, when there was a marked shrinkage in many of the groups.

**ANIMAL PRODUCTS, EDIBLE.**—Further losses in employment were indicated in this industry, 343 persons having been released during November by the 161 concerns making returns, whose payrolls included 13,709 persons. The greater part of this decline of 2.4 per cent was reported in the Maritime Provinces, although the tendency was downward in all districts. Fish canning, smoking and curing establishments were considerably slacker and dairies also registered curtailment. On the other hand, abattoirs and meat packing plants were more fully engaged. Practically no change in the situation had been indicated during November of last year and the situation at that time was slightly more favourable than for the period under review.

**LEATHER PRODUCTS.**—A continuation of the upward movement indicated in recent reports was apparent during November, when 415 persons were added to the payrolls of the 206 concerns reporting. As their total working force aggregated 18,627 employees as compared with 18,212 persons at the close of October, this represented an increase of 2.3 per cent. Quebec and Ontario firms showed practically all of the additionally employed workers, most of whom were absorbed by boot and shoe factories. Tanneries also were busier. The situation during November of last year had shown somewhat more marked improvement and the index number was very slightly higher than for the period under review.

**LUMBER AND ITS PRODUCTS.** — The trend of employment in this division continued to be abruptly downward, sawmills again releasing large numbers

of employees. Container and match factories were rather slacker, while furniture concerns showed moderate improvement. The losses in Ontario were especially heavy, more than 50 per cent of the total workers let out having been released in that province. Shrinkage, however, was recorded to some extent in all districts. Statements received from 739 manufacturers indicated that they employed 44,791 persons as compared with 49,429 employees on October 31, the difference representing a decline of 9.4 per cent. Contractions of approximately the same size had been indicated during November 1921, when employment was in considerably less volume than for the period under review.

**MUSICAL INSTRUMENTS.**—Further additions to staffs were reported by manufacturers of musical instruments during November, the gains occurring almost entirely in Ontario. A group payroll of 3,510 workers was recorded by the 45 concerns making returns, who had employed 3,317 persons in the previous month. The difference represented an increase of 5.8 per cent. The level of activity in this industry was very much higher than in November, 1921.

**PLANT PRODUCTS, EDIBLE.**—Curtailment of operations was again indicated in fruit and vegetable canneries, and the production of starch and glucose also declined. Sugar and confectionery factories, on the other hand, were busier. Additions to staffs on a small scale were recorded in the Maritime Provinces and in the Prairie Provinces, while in Quebec, Ontario and British Columbia the tendency was downward. Statements were compiled from 357 concerns in this group employing 28,591 persons as compared with 29,001 workers in the last report, a reduction of 1.4 per cent. The tendency during the corresponding month of last year had also been downward, the losses being in fact much larger than for the period under review. The level of employment at that time moreover was lower.

**PULP AND PAPER PRODUCTS.**—The favourable movement indicated by pulp and paper manufacturers during October was not maintained during the month under review and reductions in payroll affecting 346 persons were reported by the 495 concerns making returns in this group. Their payroll included 50,597 workers at the close of November. The losses in pulp and paper works were partly offset by increases in personnel in printing and publishing establishments and in paper product works. Increased activity was indicated in Ontario and the Prairie Provinces, but elsewhere curtailment was evident. The movement during November repeats that indicated during the same month of 1921, although the losses at that time were rather smaller than during the month being surveyed. Nevertheless the level of employment was lower at that time.

**RUBBER PRODUCTS.**—Tire concerns were busier during November than in the preceding month, mainly in Ontario. Statements were compiled from 42 concerns employing 10,164 persons as compared with 9,957 workers at the close of October, a gain of 2.1 per cent. This increase represents partial recovery from earlier losses. Additions to staff on practically the same scale had been registered during the same month of 1921 and the index numbers for the two periods were much the same.

**TEXTILE PRODUCTS.**—The improvement shown in textiles in the last few reports was checked during November and reductions in employment were noted, chiefly in garment factories. Hosiery and knitting mills, on the other hand, were somewhat busier. A combined working force of 71,006 persons was recorded by the 591 concerns making returns, who had employed 71,672 workers on October 31. The greater part of this contraction of .9 per cent was registered in Quebec and Ontario. The volume of employment afforded in the textile industries was somewhat larger than that indicated during November of

1921, when the situation had shown practically no change.

**TOBACCO, DISTILLED AND MALT LIQUORS.**—Further moderate reductions in activity were indicated by breweries and tobacco manufacturers during November, 122 persons having been released by the 40 firms making returns. As their working force aggregated 11,238 persons, this represented a decline of 1.1 per cent, the larger share of which occurred in Quebec.

**CLAY, GLASS AND STONE PRODUCTS.**—Glass factories continued to report additions to staffs, while brick and lime plants were slacker. A group payroll of 9,813 persons was registered by the 122 employers making returns, who had employed 9,592 workers at the close of October. This increase of 2.3 per cent was recorded chiefly in Ontario and Alberta. The tendency during November, 1921, had been unfavourable and the situation then was not so good as for the same period of 1922.

**IRON AND STEEL PRODUCTS.**—Statements were received from 738 firms in the iron and steel group with a combined working force of 120,979 persons as compared with 115,461 employees in their last report. The Maritime Provinces, Quebec and Ontario shared in this increase of over 5,500 workers, or 4.8 per cent. Steel furnaces, rolling mills and railway car factories were decidedly busier, and improvement was also registered by manufacturers of automobiles, general plant machinery, agricultural implements and in steel foundries and machine shops. On the other hand, steel shipyards, sheet metal works and iron and steel fabrication plants showed some curtailment of staff. The movement during November, 1921, had been distinctly downward and the index number stood nearly 10 points lower than for the month under review.

**NON-FERROUS METAL PRODUCTS.**—Continued expansion was evidenced in this group during November when 381 persons were added to the staffs of the

114 concerns making returns. As their total working force aggregated 10,771 persons as compared with 10,390 at the close of the preceding month, this represented an increase of 3.7 per cent. Jewellery, brass, bronze and copper concerns in Quebec and Ontario employed larger working forces, partly indicative of Christmas activity. The index number of employment in the non-ferrous metal products group stood some 17 points higher than in November of 1921, when the tendency had been unfavourable.

**MINERAL PRODUCTS.**—Cyanamid, petroleum and gas concerns, chiefly in Ontario, were not so fully employed as in October. Statements compiled from 93 concerns with an aggregate working force of 8,817 persons showed that they had reduced their staff by 262 employees or 2.9 per cent during November. Contractions of about the same magnitude had been registered during November, 1921, but the situation at that time compared unfavourably with that indicated for the month under review.

#### Logging.

Continued and marked activity was indicated in the logging group during November, almost 7,000 persons having been added to the staffs of the 198 operators reporting. The payroll stood at 30,962 persons as compared with 23,979 workers on October 31. More than half of this increase of 29 per cent occurred in Ontario, but gains on a smaller scale were also recorded in the other districts. The expansion evidenced in the last few months has been much more extensive than during the corresponding period of 1921, and the increases for the month under review proved no exception to the rule; the index number stood approximately 24 points higher than at the close of November, 1921.

#### Mining.

**COAL MINING.** — The upward movement indicated since the end of June

in this group was not maintained during November and there were declines in employment affecting 910 men or 2.8 per cent of the payroll. The 51 concerns reporting indicated a group payroll of 31,064 persons as compared with 31,974 on October 31. Both eastern and western coal fields shared in the losses, which however were somewhat heavier in the Prairie district than elsewhere. Nominal increases had been evidenced during November, 1921, and employment then was in slightly greater volume than during the month under review.

**METALLIC ORES.**—The mining of metallic ores in Ontario and British Columbia showed a general increase, chiefly in gold, silver, nickel, copper and iron mines. A group payroll of 9,890 persons was reported by the 49 concerns making returns, whose payrolls had included 9,417 workers on October 31. The difference represented an increase of 5 per cent. Contractions had been noted during November, 1921, when the situation was decidedly poorer than for the month under review.

#### Transportation.

**STREET RAILWAYS AND CARTAGE.**—Continued curtailment of operations was indicated in this group during November, chiefly in Ontario, Quebec and British Columbia. The 111 concerns making returns reported that they had let out 1,033 persons, their payroll standing at 20,478 as compared with 21,511 at the close of October, a decline of 4.8 per cent. Reductions in personnel on a smaller scale had been shown during November, 1921. The level of employment at that time was very slightly lower than for the month under review.

**STEAM RAILWAYS.**—For the first time since the end of April employment in railway transportation exhibited a declining tendency, the movement repeating that experienced during the corresponding period of 1921. Statements for November 31 were tabulated from 129 concerns and divisional superintendents, whose payrolls aggregated 77,816 per-

sons as compared with 78,975 employees on October 31, a contraction of 1.5 per cent. The reductions were widespread in application being reported to some extent in all districts.

**SHIPPING AND STEVEDORING.**—Further improvement in employment was shown in this group during November, when 2,735 persons were added to the staffs of the 61 concerns making returns. As their combined working force comprised 17,417 persons as compared with 14,682 on October 31, this indicated an expansion of 18.6 per cent. The majority of the additionally employed workers were engaged in the St. Lawrence ports, where efforts were being made to clear up the harbours before the close of navigation. A more favourable situation was indicated also in the Maritime district, while in British Columbia the trend was downward. Contractions had been indicated during the corresponding period of 1921, and employment for the period under review was in very much greater volume than at that time.

#### Construction and Maintenance.

Further pronounced contractions were recorded in the employment afforded in this group, from which 12,942 men were let out during November, a contraction of 17.2 per cent. Of that number, 2,267 had been engaged in the construction of highways, 2,376 were released by building contractors and 8,299 by the construction and maintenance departments of the railways. The combined payrolls of the 418 concerns and divisional superintendents making returns stood at 62,403 workers as compared with 75,345 employees at the end of the preceding month. All provinces shared in the downward movement; the contractions in Ontario and the Prairie Provinces, however, were especially heavy. The seasonal shrinkage registered during the corresponding month of 1921 had also been extensive, and the level of employment in the group then stood somewhat lower than during the month under review.

#### Trade.

Seasonal activity in retail establishments was very evident during November, but wholesale trade was slacker. Statements were compiled from 699 concerns with a total sales force of 58,741 persons, or 1,547 more than in

the last report, a gain of 2.7 per cent. All provinces shared to some extent in the improvement in retail shops, but the gains in Ontario were by far the largest. The movement during November, 1921, had been similar to that recorded during the month under review, expansion in retail stores considerably more than offsetting losses in wholesale houses. The level of employment for the two months, moreover, was substantially the same.

The table on page 94 gives the index numbers of employment as reported by employers in the various industries as at November 30, 1922, at October 31, 1922, and at November 30, 1921. The first column represents the proportion of workers in each industrial group in relation to the total number of workers in all groups for the month under review. (Number of workers employed in January 17, 1920, equals 100.)

### BUILDING PERMITS ISSUED DURING NOVEMBER, 1922.

ACCORDING to reports from municipal officials tabulated by the Dominion Bureau of Statistics, the value of the building permits issued in 56 cities showed a minor decrease during November as compared with the preceding month and a somewhat larger decline in comparison with the returns for November, 1921. The estimated value of the building contemplated in these cities during the month under review stood at \$9,176,861, while in October it had stood at \$9,337,253 and in November, 1921, at \$10,932,164. There was, therefore, a reduction of \$160,392 or 1.7 per cent in the former comparison and of \$1,755,303 or 16.1 per cent in the latter comparison.

An analysis of the reports shows the estimated value of building in Prince Edward Island, Ontario and Alberta to have been greater than in October. In all other provinces, however, declines were indicated. The increases in the 25 cities reporting in Ontario amounted to \$638,892, or 12.1 per cent, while in Alberta the gain was \$86,589 or 27.5 per cent. Of the reductions in the permits issued in other districts, those of \$292,483 or 54.8 per cent in British Columbia and of \$195,535, or 70.9 per cent in Nova Scotia were the largest.

As compared with the figures for November, 1921, Prince Edward Island, Ontario, Manitoba and Alberta reported

increases in the value of the permits issued, the gain of \$2,672,246 or 82.3 per cent in Ontario being the most noteworthy. In Nova Scotia, New Brunswick, Quebec, Saskatchewan and British Columbia the building anticipated was less than during the corresponding month of last year. The decline in Quebec of \$4,355,263, or 67.2 per cent was the largest and represented reaction from the unusually high level for November which was indicated in Montreal on account of authority being granted for the construction of a large hotel.

Of the larger centres, Montreal and Vancouver registered declines in the value of the permits issued as compared with October, 1922, and also with November, 1921. In Toronto on the other hand, improvement was recorded in both comparisons, while in Winnipeg the amount of building estimated was higher than in the corresponding month of last year, but showed a decline in comparison with the figures for the preceding month.

Of the other cities, St. John, Fort William, Guelph, Kingston, Kitchener, Ottawa, Sarnia and Edmonton reported advances in the amount of building contemplated as compared with October, 1922, and also with November, 1921.

ber 24, 1922. Amount of contract, unit prices.

#### DEPARTMENT OF RAILWAYS AND CANALS.

Construction of a concrete dam at Young's Point, on the Trent Canal. Name of contractor, F. R. Wilford & Company, Limited, Lindsay, Ont. Date of contract, December 14, 1922. Amount of contract, schedule rates.

#### POST OFFICE DEPARTMENT.

The following is a statement of payments made in December for supplies ordered by the Post Office Department subject to the Regulation for the Sup-

pression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions.

Nature of order	Amount of order
Making metal dating stamps and type, and other hand stamps and brass crown seals	\$1,571.51
Making and repairing rubber stamps, daters, etc.....	144.43
Making up and supplying letter carriers' uniforms, etc.....	6,156.00
Repairing letter boxes, etc., and hampers	509.50
Repairing scales.....	112.20
Supplying mail bag fittings.....	9,674.72
Supplying ink.....	433.90

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule the rates of wages for the principal classes of labour are given, with other information of general interest.

#### Manufacturing: Printing and Publishing.

OTTAWA, ONT.—OTTAWA NEWSPAPER PUBLISHERS AND OTTAWA TYPOGRAPHICAL UNION, No. 102. Agreement to be in force from January 1, 1923, to September 30, 1925.

In all newspaper offices, only journeymen members of the union in good standing, to be employed as compositors, foremen, makeups, operators, copy cut-

ters, bankmen, type casters (except where on work making type or sorts for office use), machinists and machine tenders employed on typesetting, type-casting or composing machines.

Minimum wages: per week, assistant foremen, compositors, makeups, operators, copy cutters, bankmen, type-casters, machinists and machine tenders, on evening newspapers, \$41, forty-six and one-half hours' work; on morning newspapers, \$43.50, forty-three and one-half hours' work. Overtime, price and one half. Sundays and holidays, double time, men being guaranteed at least two consecutive hours' work. This does not apply to morning newspaper employees after 7 p.m. or before 5 a.m. Day men on morning newspapers to work on the above holidays five hours, and, when required to do so to complete the work, another hour, for which they shall receive a regular day's pay. Members of morning newspaper staffs working on Saturday after the completion of regular Friday night shift to be paid time and one-half for first four hours and double time thereafter.

Hours: night work, 7 p.m. to 5 a.m.; day work, 7 a.m. to 6 p.m. When an office employs three shifts, two to be

considered as on night work. Employees not to be compelled to work more than five hours without time off for lunch. When working after 6 p.m. on evening papers, at least thirty minutes off for lunch to be allowed. No member to act as operator machinist in an office where over three machines are in operation, unless the regular operator fails to supply a substitute.

Only journeymen members or apprentices in last six months of apprenticeship to be eligible as learners on machines during working hours. Term of learners on machines to be six months. Wages per week to be as follows: first two weeks, \$15; next two weeks, \$17; following eight weeks, \$19; following six weeks, \$22; remaining eight weeks, \$30.

Loaning, borrowing, exchanging, purchasing or sale of matter or matrices of local advertisements between newspapers in Ottawa to be prohibited, with certain exceptions.

Union reserves right to refuse to execute work from or for printing offices considered unfair or in which a strike exists.

Members to be paid weekly.

Journeymen may practice on machines up to two hours per day outside of regular hours, when foreman approves.

Foreman to be judge of competency.

In event of an employee having a complaint against foreman as to his discharge, which is not adjusted by conciliation, the matter to be referred to a local Joint Standing Committee of said Union and said Publishers (two from each), to decide controversy.

Suitable arrangements to be made between foremen and chapels of various offices that a Saturday half holiday may be given to as large a portion of the men as possible.

A Joint Apprentice Committee of two representatives from each party to be formed. Proportion of apprentices to be as follows: for four journeymen or less, one; for every additional four or fraction thereof, one; not more than four apprentices on one shift. Beginning with second year, each apprentice to attend at least one session each week during the school term at the Ottawa Technical School in employer's time, but not more than one apprentice to be allowed off at once. Beginning with first week of the third year, each apprentice must subscribe for the course in printing approved by the International Typographical Union—sixty weeks at 50 cents per week. Apprentices to be under the supervision of the foreman. Apprentices to be not less than 15 years of age and to serve 5 years. The foreman and the Joint Apprentice Committee to examine applicants. At end of their second year apprentices may be admitted as apprentice members of the Union, and registered. Apprentices to undergo yearly examinations.

Scale of wages per week for apprentices; third year—first six months \$15, second six months \$16; fourth year—first six months \$19, second six months \$20; fifth year—first six months \$22, second six months \$23. Apprentices at night to receive \$1 over the above rates.

All questions between the parties to the agreement that cannot be settled otherwise to be referred to the local Joint Standing Committee.

#### Construction: Buildings and Structures

TORONTO, ONT.—SHEET METAL SECTIONS OF THE BUILDERS' EXCHANGE AND THE AMALGAMATED SHEET METAL WORKERS' INTERNATIONAL ALLIANCE, LOCAL No. 30. Agreement to be in effect from December 1, 1922, until March 1, 1924, and for twelve months thereafter unless 30 days' notice is given of change or termination.

Minimum wages: per hour—80 cents. Eight hours per day and forty-four per week. Overtime until midnight (after eight hours' work) time and one-half; thereafter and Sundays and holidays, double time.

Workman if sent to outside job to be paid railway fare and travelling expenses, and travelling time if by day; if by night, a pullman berth is to be provided (but no pay for travelling time).

It shall be optional for a shop foreman to be a member of the union.

Provisions made for a joint arbitration committee to arbitrate all disputes.

TORONTO, ONT.—MASON AND GENERAL CONTRACTORS' SECTION OF THE BUILDERS' EXCHANGE AND BRICKLAYERS' UNION, No. 2, AND STONE MASONS' UNION, No. 26. The agreement as summarized in the July, 1922, issue of the LABOUR GAZETTE remains in force with the alteration of one clause which now provides that any change must be made three months prior to December 31, 1923, and notification of the same must be made in writing and the new agreement signed by November 1, 1923.

#### Transportation and Public Utilities

##### (a) *Steam Railways.*

GRAND TRUNK RAILWAY SYSTEM AND CERTAIN OF ITS EMPLOYEES, BEING CLERKS, FREIGHT HANDLERS, ETC., MEMBERS RESPECTIVELY OF THE CANADIAN BROTHERHOOD OF RAILROAD EMPLOYEES AND THE BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES. Agreement to be in effect from November 1, 1922, until thirty days after notice in writing is given by either party of termination or revision.

The agreement is given in full in this issue in article entitled "Proceedings under the Industrial Disputes Investigation Act during December, 1922."

SYDNEY, N.S.—DOMINION IRON AND STEEL COMPANY, LIMITED, AND NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED, AND COMMITTEES OF THEIR RESPECTIVE EMPLOYEES BEING ENGINEERS, FIREMEN AND TRAINMEN. Rules and rates to be effective as from December 1, 1922.

Rates: per hour, engineers, 60 cents; conductors, 55 cents; firemen and brakemen, 46 cents. Rates to be effective until the company deems it necessary to revise same.

Rules: 1. The established time for day or night crews shall be 7 a.m. and 6 p.m. "Atlantic Standard Time."

2. Crews will not be compelled to work more than six hours without being allowed twenty minutes for lunch.

3. The working time of crews will commence at the time they are required to report for duty, and do so report, and will continue until they are relieved from duty at the end of day's work.

4. Crews will be relieved at the department in which they started work.

5. Regular crews will not be considered on duty from the time they are relieved until they are again required for their regular shift.

6. In making promotions, length of service will be considered and applied, provided that the man to be promoted is considered competent for the position.

7. When it is necessary to reduce the number of crews working and such period appears to be temporary, the work shall be divided among all the men employed. When the crews are to be laid off permanently, the junior men shall be first laid off—engineers to replace firemen and conductors to replace brakemen.

8. Railway employees not able to take their regular runs through sickness or other causes, shall report, if possible, to their foreman at least three hours before the time they were to go on duty.

9. Railway employees who have been off duty through sickness or other causes for more than one day shall report to their foreman before the end of the day previous to the time they are ready to resume their duties.

10. Any railway employee being charged with a misdemeanor shall have his case investigated and a decision rendered at the earliest possible date. He may have a railway employee present at the investigation.

11. Crews who are on night duty shall not be required to attend an investigation into a matter duly reported until they have at least eight hours rest.

12. The rules embodied in this schedule shall constitute an agreement between the Nova Scotia Steel & Coal Company, Limited, and their Railway employees, commencing December 1st, 1922, and will remain in force subject to sixty days' notice from either party.

*(b) Water Transportation.*

ST. JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES TRADING TO PORT OF ST. JOHN AND INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL 273, GENERAL LONGSHORE WORKERS.

Agreement as summarized in the January, 1922, issue of the LABOUR GAZETTE has been renewed so as to be effective from December 1, 1922, until December 1, 1923.

**Service: Public and Municipal**

MOOSE JAW, SASK.—CITY OF MOOSE JAW AND SASKATCHEWAN BROTHERHOOD OF STEAM AND OPERATING ENGINEERS, LOCAL No. 2. Agreement to be in effect from April 1, 1922, until March 31, 1923, and for an additional year, unless notice of change be given not later than January 31, 1923.

Hours per day, eight. Overtime, first eight hours, time and one-half; thereafter and Sundays and holidays, double time.

Except where specified to the contrary, following classes to receive fourteen days' annual holidays with pay; employees on monthly or weekly salary who receive no extra pay for overtime; employees who are required to work seven days per week.

Annual holidays to be allotted by the head of the Department; employee with longest service record to have first choice.

Employees after twelve months' continuous service to have full pay for time lost up to three weeks on account of personal illness, provided that a medical certificate be furnished if requested.

In filling vacancies seniority of service to govern, other things being equal.

Wages to be paid weekly.

Engineers and stoker operators shall if it is considered necessary by the Electrical Superintendent give one month's notice of intention to leave the employ of the city Electrical Department; City to give one month's notice of dismissal or one month's pay.

Minimum rates of pay: shift engineers, an eight hour day, seven days per week, no extra time allowed for work on Sundays and holidays, \$194 per month; stoker operators, same conditions, \$147.50 per month; spare stoker operators, \$33.50 per week.

For work in excess of 56 hours per week other than that made necessary by weekly change of shift, shift engineer to be paid 75 cents per hour; stoker operator, 58 cents per hour; time and one-half to be allowed.

Oilers for an eight hour day and seven days per week, per month: first six months, \$50; second six months, \$61; second year (without certificate) \$72; second year (with 3rd class certificate), \$90; third year (with 3rd class certificate), \$105; after 3 years

with 2nd class certificate, or at the option of the superintendent, with 3rd class certificate, \$125; master mechanic, \$182.50. Per hour—repairman, 60 cents; boiler washer, 56 cents; boiler washer's helper, 50 cents; coal trimmer, 47½ cents. Inside coal man and

conveyor operator, \$28 per week for seven day week (8 hour day), except on Sundays or public holidays, when only necessary work will be carried on. Repairman, boiler washer and boiler washer's helper to receive pay for not less than 48 hours per week.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1922

**I**N prices the movement was again slightly upward, both the index number of wholesale prices and the family budget in terms of retail prices being somewhat higher than in November. Seasonal advances in dairy products caused most of the increase in the family budget, while in wholesale prices in addition to agricultural products caused most of the increase in materials were higher. Textiles and hides were lower.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.39 at the beginning of December as compared with \$10.29 for November; \$11.00 for December, 1921; \$16.92 for June, 1920 (the peak); and \$7.96 for December, 1914. The total for food, fuel, and rent was \$20.97 at the beginning of December as compared with \$20.89 at the beginning of November; \$21.49 for December, 1921; \$26.92 for July, 1920 (the peak); and \$14.26 for December, 1914. The greatest change for the month was in fresh eggs which advanced nearly 10c per dozen. Cooking eggs, milk, cheese, mess pork, and sugar were also higher. The chief declines were in beef, mutton, fresh pork, rice, beans, evaporated apples, and potatoes. Bread, flour, and rolled oats were unchanged. Fuel was slightly lower. Rentals were steady.

In wholesale prices the Departmental index number showed another small advance in December to 223.0 as compared with 221.7 for November; 230.7

for December, 1921; 290.5 for December, 1920; 356.6 for May, 1920 (the peak); and 137.6 for December, 1914. The most important advances during the month were in bran and shorts, cattle and beef, eggs, fresh fish, flour, sugar, woollen yarn, jutes and hessians, metals, Connellsville coke, and lumber, and smaller increases in Ontario grains, butter, apples, beans, canned corn, and miscellaneous building materials. The chief declines occurred in hay, live and dressed hogs, raw cotton, raw silk, flax, hides, and turpentine, and smaller declines in Western grains, potatoes, and some raw furs. As compared with a year ago all groups were lower except animals and meats, textiles, hides, metals, and fuel.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices for the several commodities in relation to the average prices for the base period, 1890-1899, these being, therefore, made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Departmental list) including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels

in 1913 as 100, showed an advance to 154.2 in December, the highest point reached since August, 1921, as compared with 152.1 in November; 150.1 in December, 1921; 199.9 in December, 1920; and 104.4 in December, 1914. Twelve commodities advanced, ten declined, and twenty-eight were unchanged. The most important advances were in cattle and beef, mutton, butter, eggs, flour, sugar, and spruce, and the most important declines were in hogs, bacon, potatoes, raw cotton, and hides.

The Canadian Bank of Commerce index number of exports continued to rise, being 146.26 in mid-December as against 145.82 in mid-November. The index of imports, however, fell from 162.44 in November to 161.55 in December. The combined index number of imports and exports was lower at 153.95 for November as compared with 154.13 for December.

Professor Michell's revised index number of wholesale prices in Canada from 1919 to date, based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, advanced to 170.2 for December as compared with 168.3 for November; 166.2 for October, and 168.2 for December, 1921. Both foods and manufacturers' goods advanced.

The table of retail prices and rentals shows the prices at the beginning of December of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Depart-

ment and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list and in the case of a number of articles the average prices of the grades most sold have been given owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in

the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at

hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices.

Continuing the decline since July, sirloin steak was down in the average from 27.7c per pound in November to 26.4c in December, the prices in each province averaging lower. Round steak also was 1c per pound lower at 21.6c, showing about the same general decline as sirloin. Rib roast and shoulder roast were each about 1c per pound lower in the average, the former at 19.7c per pound and the latter at 14.3c. Veal fell from 18.4c per pound to 18c, the decline being general. Mutton also averaged slightly lower at 26.5c per pound. Roast pork fell from 27.9c per pound in the average to 26.4c, but advanced in Nova Scotia. Mess pork was slightly higher at 26.1c per pound. Bacon was steady. Ham averaged  $1\frac{1}{2}$ c per pound lower at 61 $\frac{1}{2}$ c, but was higher in Saskatchewan. In fresh fish, cod and white fish were higher, while halibut was down. Salt herring and salt cod advanced slightly. Canned salmon was down from 37.8c per one pound tin to 36.8c. Lard was steady.

Fresh eggs advanced in the average to 60.3c per dozen as compared with 51.6c in November, 41.7c in October and 35.8c in September. The advance was general. Cooking eggs, also, rose from 43.7c in November to 46.1c in December. Milk was slightly higher at 11.9c per quart, advances occurring in New Glasgow, Brockville, Brantford, Woodstock, Medicine Hat, Edmonton, and Lethbridge, while Vancouver and Victoria were lower. Dairy butter fell  $\frac{1}{2}$ c per pound to 38.2c in the average, but was higher in the Eastern provinces. Creamery butter was up from 43.7c to 44.4c but was lower in the Western Provinces. Cheese advanced about 2c per pound to 30.6c.

Bread was unchanged in the average, but was slightly lower in St. Thomas and Fernie. Soda biscuits were steady. Flour and rolled oats were unchanged. Rice and tapioca were slightly lower, the former at 10.4c per pound and the latter at 12.3c. Canned tomatoes were down from 18c per can to 17½c. Canned peas and corn were steady. Beans were slightly lower at 8.4c per pound. Potatoes averaged \$1.14 per ninety-pound bag as compared with \$1.15 in November and \$1.21 in October. Evaporated apples were down slightly at 22.5c per pound. Prunes were lower at 19.1c. Raisins fell from 23.3c per pound to 21.4c, while currants were up 1c per pound to 24.1c. Jam and canned fruits were unchanged. Corn syrup declined from 50.7c per five-pound tin to 50.2c. Granulated sugar rose from 9c per pound in the average to 9.3c and yellow from 8.5c per pound to 8.8c. Vinegar, salt, and pepper showed little change. Cream of tartar was down from 72.3c per pound to 70.7c. Laundry starch was also slightly lower at 11.9c.

Anthracite coal was down in the average from \$18.48 per ton in November to \$18.28 in December. Prices were lower in Quebec, St. Hyacinthe, Stratford, Cobalt, Port Arthur and Fort William but advanced in St. John, Fredericton, Thetford Mines, Hamilton, and Saskatoon. Bituminous coal declined in the average from \$12.30 per ton to \$12.05. Declines occurred in Stratford, St. Thomas, Fort William, and Brandon, and advances in St. John's, Woodstock, and Sault Ste. Marie. Hard wood, four feet long, was slightly lower at \$12.61 per cord. Soft wood, also, declined from \$9.47 per cord to \$9.42. Coal oil was steady. Rent was slightly higher at Thetford Mines but other localities were unchanged.

#### Wholesale Prices.

**GRAINS AND FODDER.**—Wheat, No. 1 Manitoba Northern, at Winnipeg, which was quoted at \$1.14 per bushel the third week in November, fell to \$1.08 by the

end of November, and then advanced to \$1.13 by the end of December. Ontario winter wheat at Toronto rose from \$1.10 per bushel at the end of November to \$1.14 at the end of December. Western barley at Winnipeg advanced from 53c per bushel to 57c. Ontario barley was steady. Western oats rose from 45c per bushel to 48c. American corn advanced from 87c per bushel to 90c. Flaxseed declined from \$2.21 per bushel at the beginning of November to \$2.02 by the end of November, and then advanced to \$2.15 the last week, in December. Hay at Toronto declined \$1 per ton to \$14. Bran and shorts both advanced \$1 per ton, the former to \$24 and the latter to \$26 per ton.

**ANIMALS AND MEATS.**—Choice cattle at Winnipeg advanced from \$5.25 per hundred pounds toward the end of November to \$6 about the middle of December and later declined to \$5. Cattle at Toronto fell 50c per hundred pounds to \$6.50. Beef, dressed, hind-quarters, was slightly higher at 16c per pound. Hogs at Toronto fell from \$10.50 per hundred pounds to \$9.50, but later advanced to \$10.75. Dressed hogs were steady at the lower levels reached the latter part of November. Sheep declined \$1 per hundred pounds to \$6.50. Dressed turkeys at Montreal advanced from 42c per pound in the last week in November to 47c the third week in December and then declined to 40c.

**DAIRY PRODUCTS.**—Finest creamery butter at Montreal advanced from 36½c per pound to 40c while at Toronto the advance was 1c per pound to 43c. Dairy prints were also slightly higher at 34c per pound. Cheese rose from 23½c per pound to 24½c. Fresh eggs at Montreal rose from 60c-65c per dozen at the middle of November to 80c-90c by the middle of December and then declined to 75c-85c toward the end of December. Storage eggs at Toronto were steady at 38c-39c per dozen. Milk at Victoria declined 10c per gallon to 35c.

**FISH.**—No improvement was reported in the demand for codfish from Europe

\*Preliminary figures. †Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915. ‡Revised.

or the West Indies and the market was said to be very weak. In pickled fish, herring were reported at \$3.50 per barrel and spring mackerel at \$6.00-\$6.50 ex-store with little demand. Fresh white-fish and salmon trout at Toronto each advanced  $3\frac{1}{2}$ c per pound to 16c.

FRUITS AND VEGETABLES. — Lemons at Toronto fell from \$8 per box to \$6. Potatoes at Montreal declined from 95c per 90 pound bag to 90c. Beans rose 40c per bushel to \$3.65. Canned corn was slightly higher at \$1.25-\$1.45 per dozen tins.

MISCELLANEOUS FOODS. — Tapioca was up 1c per pound to  $9\frac{1}{2}$ c. Flour, Manitoba patents, was up 10c per barrel to \$7.20. Granulated sugar advanced from \$8.14 per hundred pounds to \$8.39.

TEXTILES. — Woollen yarn advanced 10c per pound to  $87\frac{1}{2}$ c. A line of wool-len underwear was up 5 per cent. Cotton, middling uplands, fell from 26.3c per pound to 25.5c. Woven coloured fabrics were slightly higher at 78.55c per pound. Most other lines of manufactured cottons were steady. Raw silk was 10c per pound lower at \$8.30, while machine silk advanced from \$18.25 per pound to \$19. Jutes and hessians advanced the former 10.02c per pound to 10.78c and the latter from 12.05c per yard to 12.51c. Flax fibre was slightly lower at 18c-25c per pound. Tow was also down from 11c-15c to 7c-15c. Linen rope was 7c per pound lower at 40c and flax sewing twine was down from 50c per pound to 40c.

HIDES, LEATHER, BOOTS, AND SHOES. — Hides, steers and cows, fell from 12c per

pound to 10c and calf skins from 16c per pound to 13c. No changes were reported in leather. Some lines of boots were higher.

METALS AND IMPLEMENTS. — Aluminum rose from 22c per pound to 23c and antimony from 8c per pound to  $8\frac{1}{2}$ c. Quicksilver was slightly higher at \$71-\$72 per seventy-five pound flask. Bar silver at New York fell from  $63\frac{1}{2}$ c per ounce to  $62\frac{3}{8}$ c.

FUEL AND LIGHTING. — Connellsville coke at the ovens advanced from \$6.75-\$7.25 per ton to \$7.50-\$8.00. Coal, gasoline, and coal oil were steady.

BUILDING MATERIALS. — Spruce deals at St. John advanced from \$25 per M to \$27. Pine, box boards, at Ottawa was higher at \$36 per M. Hemlock, log run, was also slightly higher at \$24-\$28 per M. Rough lumber at Victoria declined \$2 per M to \$14. Fire brick advanced from \$55-\$85 per M to \$60-\$90. Cement was steady. Sash weights were higher by 25c per hundred pounds at \$3.25. Copper wire was also higher about 1c per pound at 16.623c. Linseed oil advanced from \$1.08 per gallon to \$1.10 while turpentine declined from \$2.30 per gallon to \$2.10.

HOUSE FURNISHINGS. — Sad irons declined 10c per set to \$1.90.

DRUGS AND CHEMICALS. — No changes were reported.

MISCELLANEOUS. — In raw furs, muskrat skins declined from \$1.50 each to \$1.20. Raw rubber at New York advanced from  $21\frac{1}{2}$ c per pound to  $22\frac{1}{4}$ c.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases.

### Great Britain.

**WHOLESALE PRICES.**—The Board of Trade index number of wholesale prices (1913=100) stood at 157.1 for November, an increase of 1.5 per cent on the October level, with an increase of 1.8 per cent in foods and of 1.4 per cent in industrial materials. The index number for industrial materials is greater than for any month of 1922 with the exception of January. Cereals were cheaper in November than in October, and meat, fish and other foods dearer. The iron and steel group index figure was down slightly, and that for other metals and minerals showed no change. The price of cotton reached the highest level of any month since November, 1921, and that of textiles other than cotton, the highest level since March, 1921.

The *Times* index number of wholesale prices of 60 commodities showed slight advances during October and November, the November level of 160.7 (1913=100) being the highest recorded since December, 1921. The upward movement was less marked during November owing to the declines in copper, tin and foreign wheat, which accompanied increases in cotton, jute and plantation rubber. Foods advanced 2 per cent during the month and industrial materials 1.2 per cent.

The *Economist* index number of wholesale prices at the end of December

was 193.8 (1901-1905=100), showing a decline of 0.4 per cent from the level at the end of November. Textiles showed the largest decline, with slighter ones in cereals and meat, and miscellaneous products. Grocery foods (tea, sugar, etc.) rose slightly in price and minerals increased half a point.

The *Statist* index number, in continuation of Sauerbeck's figures showed another slight advance in November, standing at 130.6 at the end of the month, an advance of 0.5 points over the level at October 31. All groups advanced except minerals, which declined 1.2 per cent, owing to drops in standard copper, Straits tin and English pig lead and coal (average export price). The largest increase is one of 3 per cent in the sugar, coffee and tea group, due to an increase in the price of tea.

**COST OF LIVING.**—The index number of cost of living compiled by the Ministry of Labour was 178 for January 1, 1923, a drop of two points. Food prices fell 3 points to 175 and sundries fell 5 points to 185. The other groups showed no change from the figures of the previous month.

### Austria.

**COST OF LIVING.** — In Austria and Czecho-Slovakia prices in the autumn of 1922 showed a marked tendency to decline, while in other countries of Europe rising prices were the rule during the same period. Retail prices in Austria reached the peak in the month of September, 1922, and are shown in the index numbers of the total budget of the Paritätische Kommission of cost of living of one person at Vienna to have declined 9.2 per cent, or to 1,036,308, (July, 1914=100) owing to the stabilizing of the crown. Foods dropped 12.2 per cent, and clothing 8.1 per cent. Rent, and heat and light continued to increase.

**Czecho-Slovakia.**

**COST OF LIVING.**—The index number of foods and textiles compiled by the Government Statistical office shows the effect of the recent government proclamation asking for co-operation in an effort to bring down prices. This step was found necessary owing to the rise of the crown which seriously affected the export trade. The range in exchange value of the crown on New York was 3.09 to 3.59 cents in October, and 3.15 to 3.24 cents in November. The index number of foods reached its high peak in June, being 1475, on the base July, 1914=100. In July the index number was 1430; in August, 1290; in September, 1105; and in October, only 1016, or a total drop for the four months period of 31.1 per cent from the July level. Textiles, which had been decreasing in price since several months earlier, fell to 1219 by October, a drop of 29.8 per cent for the same four months period.

**Belgium.**

**WHOLESALE PRICES.**—The official index number of wholesale prices compiled by the Ministry of Industry and Labour, on the base prices in April, 1914=100, was 385 for October, an increase from the September level of nearly 5.8 per cent. All groups shared in the increase, except petrol and its products and construction materials, both of which groups declined slightly.

**Bulgaria.**

**WHOLESALE PRICES.**—The index number published by the Director General of Statistics (1913=100) showed the slight increase of about 1.1 per cent from September to October, reaching the level of 2558.

**France.**

**WHOLESALE PRICES.**—The index number of the Statistique Générale (1901-1910=100), stood at 407.0 for November, an increase of 4.4 per cent from the October level. Foods increased 5.9 per

cent, all groups sharing in the increase. Industrial materials increased 3.3 per cent, textiles and the miscellaneous group showing increases, and minerals and metals a slight decrease. The general index number of wholesale prices rose again in December to 418.4 or 2.8 per cent. Index numbers of groups are not yet available.

**COST OF LIVING.**—The index number compiled by the Commission of Studies on the Cost of Living showing changes in the cost of living for a family of four in Paris, on the base 100 in 1914, dropped to 289 for the third quarter of 1922, or 4 per cent below the level of the second quarter. Foods declined 6.9 per cent to 288; heat and light rose 1.4 per cent to 291; rent rose 9 per cent to 175; clothing rose 3.5 per cent to 326, and sundries showed no change.

**Germany.**

**WHOLESALE PRICES.**—The Reichsmark fell in value from 3181 to the dollar in October to 7183 in November, and with this decline, wholesale prices doubled. The index number of the Federal Statistical Office rose from 56,601 to 115,100, or 103.4 per cent. Since the prices first began to rise so steeply it has been found necessary to calculate the index number for two intermediate dates during each month. The index number as at December 5, the latest date available, was 149,510. From October to November goods produced increased 91 per cent, and "goods imported," 137 per cent. Industrial materials rose considerably faster than foods.

**COST OF LIVING.**—The index number calculated by the Federal Statistical Office (1913-14=100) of the cost of living in 71 cities was 40,047 for the month of November. This figure which is for the old budget, without clothing, shows an increase of 105.3 per cent above the October level. The budget including clothing reached 44,610, or 102.2 per cent above the previous month. Food alone stood at 54,982; heat and light at 50,830 (25,172 in October); rent at 1,133 (795 in October); and clothing at

\*For South Africa, Australia and New Zealand base is taken as 1000 instead of 100. *a.* Average for year. *b.* Quarter beginning in specified month. *c.* 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. *d.* New index number is joined to old index number (38 commodities) and all converted to base 1913-100. *e.* The commodities in these two new index numbers are in the one case, articles chiefly exported, in the other case, articles chiefly imported. *f.* First of month. *g.* Middle of month. *h.* End of month. *i.* Monthly average. *k.* Now Göteborgs Handels och Sjöfartstidning.

74,162. The advance was general in all localities, being rarely below 100 per cent for the month.

#### Poland.

The official index number of cost of living in Poland on the base, prices in 1914=1 was 1284 in October as against 1077 in September and 908 in August, a total increase for the two months of 41 per cent on the August level. All groups shared in the increase.

#### Italy.

WHOLESALE PRICES.—Wholesale prices in Milan, according to the index number published by the Chamber of Commerce and Industry increased 1.1 per cent to 107.14 in November on the previous month. The index numbers by groups for November (average prices, May-December, 1921=100) were as follows: Foods, 101.91, a decrease for the month of 1.4 per cent and industrial materials 109.42, an increase of 2.2 per cent.

#### Switzerland.

COST OF LIVING.—The official index number of cost of food, heat and light compiled by the Federal Labour Office on the base June, 1914=100, shows the following changes since July, 1922.

	Non-manual workers	Skilled manual workers	Unskilled manual workers
August .....	156	154	152
September .....	156	154	152
October .....	157	155	153
November ....	159	158	155

#### India.

COST OF LIVING.—The official index number of cost of living at Bombay compiled by the Bombay Labour Office dropped 2 points during November and thus stood at 160 for the month, (July, 1914=100). Foods dropped 3 points, to 155. Of these all food grains except rice declined as well as refined sugar and ghee; potatoes declined and onions increased in price owing to seasonal

causes, and raw sugar, salt, beef, mutton, milk, tea and cocoanut oil showed no change. Fuel and lighting and house rent remained at the level of the previous month, while the index number of clothing showed a decline of 2.1 per cent. The figures for food grains, clothing, and the total budget are the lowest at least as far back as April, 1919, the first month for which information is available.

#### United States.

WHOLESALE PRICES.—The Bureau of Labour Statistics index number showed an increase of 2 points for November, or of 1.3 per cent on the previous month's level. Prices of farm products increased  $3\frac{1}{2}$  per cent owing to advances in grains, cotton, cottonseed, hay, eggs, peanuts, sheep and wool. Foods and cloth and clothing advanced over 2 per cent, and chemicals and drugs almost  $2\frac{1}{2}$  per cent. Building materials, house-furnishing goods and miscellaneous commodities also increased slightly. Fuel and lighting materials decreased owing to declines in the average prices of coal and coke, and metals and metal products showed a decline owing to the drop in pig iron and steel billets.

Gibson's average index number of wholesale prices for 22 articles of food for December was 73.1 against 72.2 for November, thus showing an increase of 1.1 per cent. The yearly average for 1922 is 70.9 against 71.8 for 1921, a drop of 1.3 per cent.

The *Annalist* index number of wholesale prices of a food budget of 25 foods showed a downward trend at the end of the year, falling from 195.619 on November 18 to 189.307 on December 16, or 3.2 per cent, and further to 186.967 at December 30.

COST OF LIVING.—The index number of retail prices of 43 foods in 51 cities compiled by the Bureau of Labour Statistics showed an increase of nearly 1.4 per cent in November as compared with October. The chief increases were: strictly fresh eggs, 19 per cent; butter,

7 per cent; evaporated milk and cheese, 4 per cent. The chief decreases were: oranges, 17 per cent; pork chops, 10 per cent; potatoes, 5 per cent; raisins, 4 per cent. Twelve articles showed no change and the remainder rose or fell slightly. The year period from November 15, 1921, to November 15, 1922, showed a decrease in all foods of 5 per cent.

The index figures of cost of living in Massachusetts, compiled by the Special

Commission on the Necessaries of Life, were as follows for December, 1922 (1913=100): food, 139.8; clothing, 179.4; shelter, 162.5; fuel, 184.8; sundries, 168.8; combined, 157.5; for November: food, 139.9; clothing, 179.1; shelter, 162.5; fuel, 184.5; sundries, 169.7; combined, 157.7. The figures for October were: food, 138.2; clothing, 178.4; shelter, 162.0; fuel, 182.6; sundries, 169.7; combined, 156.6.

## RECENT LEGAL DECISIONS AFFECTING LABOUR.

**T**HE two legal decisions which are summarized below relate respectively to a case of workmen's compensation in the Province of Quebec, and an action for damages for the death of a workman in Alberta. In an article on another

page of this issue there is given in brief a judgment of the Court of Appeals of the District of Columbia, with reference to the validity of the minimum wage law of that District which had been enacted by the United States Congress.

**Injured workman may bring action under Quebec Workmen's Compensation law while similar action under Common law is pending.**

A workman in the province of Quebec brought an action against his employer under the common law, claiming \$30,000 damages for an accident which he had incurred a few months previously. Before a decision had been rendered in this case, he instituted another action for a similar amount under the Workmen's Compensation law of Quebec, alleging inexcusable fault. The employer moved that this second action be dismissed on the ground that another action concerning the same case was pending. The Superior Court dismissed this motion and the employer appealed to the Court of King's Bench.

The workman declared that he had instituted the second action in order not to be debarred through the lapse of a year as prescribed by the Workmen's Compensation Act, in the event of the loss of his first action taken under the common law.

The Court of King's Bench held there was no doubt that, if the workman had sought to have recourse to both actions simultaneously the appellant would have had the right to force him to

choose between the two modes of procedure. Under the existing circumstances, the appellant could oppose the second action, and if the first action was maintained, then the second one would be dismissed with costs against the workman. On the other hand, the appellant could make a motion that the second action be stayed until judgment had been delivered in the first. For the application of the rule concerning concurrent actions, there are required, in addition to the identity of the parties, the identity of the object and the identity of the cause. There is identity of object in two legal actions if the same law is involved in both, and there is identity of cause if the claim which is being pursued has the same foundation in both cases. If these two identities appear there is concurrent litigation and both actions cannot be maintained because in declaring their judgments in the two cases the courts would be in danger of passing contrary judgments in the same action. In the first action the cause, the foundation of the claim, is the fault of the employer. In the second action it is the respon-

sibility which the law imposes upon the employer, as to whether he is at fault or not.

It was therefore held by the Court that there was neither identity of object

nor identity of cause and that the argument from concurrence of litigation must be rejected.

(*Quebec—Pontiac Lumber Company vs. Gentil.*)

**Proof of negligence of claimant does not avail if negligence of defendant is cause of accident.**

A section foreman of the Alberta and Great Waterways Railway Company was killed in a collision when bringing an officer of the Company to Edmonton on a speeder. The accident occurred at night on a part of the line which is used jointly by this Company and the Edmonton, Dunvegan and British Columbia Railway Company, when the speeder collided with a velocipede on which an employee of the latter Company was riding from Edmonton to his place of work. Action was brought in the Supreme Court of Alberta against the Edmonton, Dunvegan and British Columbia Railway Company on behalf of the widow and children of the victim, on the ground of negligence.

line, and further that he was negligent in not getting leave from the despatcher at Edmonton to travel over the joint section and in not reporting his presence on the line when he reached Carbondale, the junction point. Finally the defendant Company claimed that the deceased had failed to comply with a rule of his own company requiring conductors to telephone to the despatching office at Edmonton from Carbondale before bringing their trains on the joint section.

With regard to the first contention, the Court held that the deceased, though not in the performance of his usual duties, was acting under instructions of a superior officer, and under the agreement between the two companies had as much right to use the joint section for all proper purposes, as an employee of the other. With regard to the failure of the deceased to get leave from the despatcher at Edmonton, or to report his presence on the line, the Court declared that in this respect he was guilty of negligence, but that if he had asked for instructions he would have undoubtedly been told that the line was clear, as it then was, the other man not having left on the velocipede until later. Consequently, this negligence did not contribute to the accident, and "the negligence of a plaintiff which avails a defendant as an answer to his own is only that which contributes to the accident."

For these reasons judgment was delivered in favour of the plaintiffs, and they were awarded \$15,000 damages, of which \$10,000 would go to the widow and \$2,500 to each of the two children.

(*Alberta—Calper vs. Edmonton, Dunvegan and British Columbia Railway Company.*)

On behalf of the plaintiffs it was alleged that the negligence consisted in the velocipede travelling without a light. Further evidence that was brought out in the trial showed that the workman riding the velocipede had not obtained a clearance order from the operator at the Edmonton railway yard before proceeding on the track. The Court held that this man's act in going on the track without a clearance order and without a light was evidence of negligence, and as it was to be presumed that he was then acting as an employee, the Company was liable to damages to the plaintiffs if they were otherwise entitled to recover.

On behalf of the defendant Company, it was claimed that the plaintiffs had no right to recover even had they succeeded in proving the charge of negligence against it, inasmuch as the deceased had acted wrongfully and was himself guilty of negligence. The Company alleged that the deceased had no right to go beyond his own section or to run his speeder over the joint section of the

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

**This issue  
in brief**

In addition to the regular monthly articles this issue of the

LABOUR GAZETTE contains articles covering the fourth quarter of last year in respect to unemployment among members of trade unions, the work of the Employment Service of Canada, immigration and industrial accidents. Among other articles might be mentioned one summarizing the employment situation during 1922 and another dealing with the changes in the cost of living by principal items in Canada and in other countries since 1914.

At the beginning of January the percentage of unemployment among members of trade unions was 6.4 as compared with 6.2 at the beginning of December, and with 15.1 at the beginning of January, 1922. Employment as reflected in reports from employers showed a further decline at the end of December, due mainly to a continuation of seasonal reductions and to slackness incidental to the holiday and mid-winter inventory period. The offices of the Employment Service of Canada reported a further contraction in business.

The average cost of the weekly family budget of 29 staple foods was \$10.52 at the beginning of January as

compared with \$10.39 at the beginning of December. \$11.03 for January, 1922, \$16.92 for June, 1920 (the highest point reached), and \$7.73 for January, 1914. The total of the combined budget of food, fuel and rent was \$21.18 at the beginning of January as compared with \$20.97 for December, 1922; \$21.52 for January, 1922; \$26.92 for July, 1920 (the highest point reached), and \$14.49 for January, 1914. In wholesale prices the index number stood at 223.0 for January as compared with the same figure for December, 1922; 227.7 for January, 1922; 356.6 for May, 1920 (the highest point reached), and 136.5 for January, 1914.

The time loss due to industrial disputes was less during January than during December, 1922, and also less than during January, 1922. There were in existence during the month 14 strikes involving about 2,580 workpeople with an estimated time loss of 51,890 working days. The time loss in the previous month amounted to about 60,561 working days. One of the strikes commenced during January; this strike involving 670 workpeople, was terminated during the month, leaving 13 strikes involving about 1,910 workpeople on record at the beginning of February.

**Proceedings  
under the  
Industrial  
Disputes  
Investigation  
Act**

During January no report was received from any Board of Conciliation and Investigation. Two Boards were established and one application for a Board was received, which was subsequently withdrawn.

**Jottings**

Conventions of the following international and Canadian organizations will be held during the months of April and May:

Amalgamated Association of Iron, Steel and Tin Workers of North America, at Warren, Ohio, on April 2 to 17.

Brotherhood of Dominion Express Employees, at Toronto, Ont., on April 16.

United Cloth Hat and Cap Makers of North America, at New York, N. Y., on May 1.

International Longshoremen's Association, at Boston, Mass., on May 14 to 21.

American Federation of Musicians, at St. Louis, Mo., on May 14 to 21.

Boot and Shoe Workers' Union, at Montreal, Que., on May 18.

The Soldier Settlement Board reports that the settlement figures at the end of 1922 show 22,548 settlers with loans amounting to \$93,235,902. A further 6,392 men have been settled on crown lands without loans, making a total settlement of 28,940. The number who have given up their farms after a trial amounts to 13.7 per cent of the total who have received loans, a very slight increase over the percentage at the end of the previous year.

The Minimum Wage Board of Alberta published at the end of January the first orders issued under the Minimum Wage Act of 1922. These orders are six in number, and relate to female workers in the following occupations: manufacturing; laundries; dyeing and

cleaning; hotels, restaurants, refreshment rooms and boarding houses; personal service; offices; shop, stores and mail order houses. The minimum rate for experienced employees is in all these occupations \$14 a week, with special provision being made for learning periods. Full particulars of these orders which come into force on April 1, will be given in the next issue of the LABOUR GAZETTE.

The Minister of Labour of Ontario, in reply to a question recently stated that the legislation on the Provincial statute books prohibiting the employment of white girls in Chinese restaurants or laundries had not been proclaimed. The number of girls, he stated, so employed was very small; in Toronto there were 121 Chinese restaurants which employ only 126 white girls. The legislation referred to is the Factory, Shop and Office Building Act (R. S. O. 1914, chapter 229, section 31a. This section was added in 1914).

The average rate of wages per week that has been offered through the Ontario Government Employment Bureau to the unemployed by farmers requiring help in the province was recently stated by the Minister of Labour of Ontario to be \$8.36 per week and board.

The Alberta provincial mines branch reports that the coal production of the province for 1922 exceeded that for 1921 by 38,549 tons, the figures for these years being 5,975,744 tons and 5,937,195 tons respectively.

At the annual meeting of the Western Canada Coal Operators' Association, held in Calgary on January 12, the following officers were elected: President, John Shanks, general manager, Brazeau Collieries Limited, Nordegg, Alta; First Vice-president, Jesse Gouge, president Newcastle Coal Company, Limited, Drumheller, Alta; Second Vice-president, N. M. Morrow, chief operating officer, Canmore Coal Company, Limited, Canmore, Alta; Secretary, R. M. Young (re-elected).

The Edmonton Trades and Labour Council is now conducting its second University Extension course, "Studies of Canadian Public Finance", under the direction of Professor H. S. Patton, M.A., University Extension lecturer in Economics. The first of these tutorial courses, held last year, was on "Government of Modern Democracies."

At the convention of the Provincial Builders and Supply Association of Ontario, held at London on January 24, a resolution was adopted calling on the Ontario Employment Service Council to use every means possible to make the building trade an all-year work, because of the appalling falling off in apprentices to the building trade. A resolution was also adopted, favouring the formation of a provincial builders' accident association.

It is announced that the Foreign Concession Department of the Soviet Government has approved a contract giving the American-Russian Trade Industrial Workers' Association the privilege of participating in the operation of the Government clothing manufacturing trust which was mentioned in the LABOUR GAZETTE issue of June 1922, at page 599. The contract, it is stated, calls for joint management of clothing factories employing 20,000 workers, the majority of whom are women. United States workers have raised \$300,000 of the \$1,000,000 contribution necessary for the capitalization of the enterprise, and the Soviet Government has guaranteed against loss of the capital and also an eight per cent dividend to be paid in dollars. The privilege of exporting furs and importing cotton from the United States for use by the trust is embraced in the contract. The clothing trust has a working capital of \$3,000,000 which gives the Soviets control to the extent of two-thirds.

It is reported that the Minister of Labour and Social Welfare of Roumania is preparing a bill which provides for the establishment of a

Superior Council of Labour consisting of employers, workers and specialists in labour questions, which shall act as an advisory body to the minister on all questions concerning labour.

Immigration      Announcement has plans and aims.      been made by the Ontario Department of

Agriculture that it had completed arrangements with the Overseas Settlement Committee of Great Britain for the settling of boys and girls from that country on Ontario farms. The plan is to bring out boys and girls of about thirteen years of age in groups of ten, and to settle these groups on central farms in various parts of the province. They will live on these farms until they are eighteen years old, and will be hired out to neighbouring farmers, part of their wages being left to them for spending money and the remainder banked for them. The first party are expected to arrive during April.

It is reported that Mr. E. W. Beatty, K.C., president of the Canadian Pacific Railway, is awarding a full summer's course at the Agricultural Schools of Alberta to the four prize winners of the Young Farmers' Clubs of Great Britain. These boys will arrive in time to begin their course in May and it is planned to give them as thorough and comprehensive an impression of Western Canadian agricultural conditions as possible. They will return to England in the autumn and arrangements have been made for them to write on their experiences in the agricultural press of the British Isles.

Plans of the Salvation Army for the settlement in Canada of 25,000 young men and women and children selected in the British Isles have been approved by the Dominion government. This undertaking will be carried out in co-operation with the Overseas Settlement Committee of Great Britain as well as with the Dominion Government. Provision is made for giving the youths a short intensive course of training on

the Army's farm in England. The first party of settlers under this scheme are expected to sail early in March.

**Government  
railway  
employees  
and political  
life.**

An informal conference took place at Ottawa on January 5 between the management of the Canadian National Railways and the chairman of the railway labour organizations, representing about 97,000 employees of the railways. At this meeting Sir Henry Thornton, president of the system announced that the order which had been issued by former President Hanna, in October 1920, debaring employees of the railways from offering themselves as candidates for public elective offices was now rescinded.

**Restoration of  
pension and  
seniority rights  
of certain  
Grand Trunk  
Railway  
employees.**

With reference to the action taken by officers of the Canadian National Railways in restoring the pension and seniority rights of Grand Trunk Railway employees who participated in the 1910 strike of train and yardmen, resolutions of appreciation were passed by trainmen of the Grand Trunk Railway System, members of various divisions of the Order of Railway Conductors. These resolutions were forwarded to the Prime Minister of Canada; Sir Henry Thornton, President of the Canadian National Railways; and others. In transmitting copies of the resolutions to the Prime Minister, the Canadian Legislative Representative of the Order of the Railway Conductors, wrote: "This satisfactory settlement of a long-standing injustice (1910 to 1922), is an encouragement to those who believe that grievances growing out of industrial relations can be adjusted between men of good-will by patient, industrious persistence, without resort to revolutionary methods."

**Fair Wage  
policy in  
Ontario.**

The Minister of Labour of Ontario, replying recently to a question in the Legislature as to whether he intended to introduce during the present session legislation to provide a Fair Wage clause in all public contracts and for all work undertaken on behalf of the Ontario Government, as requested by the Trades and Labour Congress of Canada and other labour organizations, stated that the following resolution was adopted by the Ontario Legislature in 1900, and that in the opinion of the Government it was as binding as any act:—

Resolved, that in the opinion of this House all government contracts should contain such conditions as will prevent abuses which may arise from the sub-letting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, and that this House cordially concurs in such policy and deems it the duty of the government to take immediate steps to give effect thereto; and it is hereby resolved that the work to which the foregoing policy shall apply include not only work undertaken by the government itself, but also all works aided by a grant of Provincial public funds and that the aforesaid policy shall be forthwith applied to every department of public service and to all parties now performing services for the government. That this House is further of opinion that in all appropriate cases the legislation of this House should be in harmony with this resolution.

The Minister concluded by stating that the suggestion of organized labour for the better carrying out of the purposes of this resolution would receive the consideration of the Government.

**International  
Association of  
Industrial  
Accident  
Boards and  
Commissions.**

The ninth annual meeting of the International Association of Industrial Accident Boards and Commissions was held at Baltimore, Md., on October 9 to 14, 1922. Official representatives were present from twenty-one States and three provinces of Canada as well

as from the United States Bureau of Labour Statistics, the United States Bureau of Standards and the United States Veterans' Bureau. At this meeting the Association dealt chiefly with questions of uniformity and adequate standards in compensation, administration and legislation. A standard permanent partial disability schedule which was outlined in a report by the committee on statistics was referred back to the committee for further consideration, but the following principles recommended by the committee were approved: (1) The schedule of permanent partial disability compensation shall be for compensation to be paid after compensation has been paid for temporary disability, whether total or partial. (2) Compensation for permanent total disability shall be valued on the basis of total disability for life. (3) Compensation for permanent partial disability shall be valued as a percentage of permanent total disability. (4) The permanent disability schedule shall be one designed to measure loss of earning capacity, considering all elements.

A resolution was adopted that the Association should appoint a committee to co-operate with a similar committee of the American Medical Association to work out a standard eye injury schedule for use by compensation commissions. Papers were read by various members on accident prevention, on methods of computing workmen's compensation claim reserves, death benefits, the status of farm labour under workmen's compensation, etc.

The following officers were elected for the ensuing year: President, Mr. F. A. Duxbury, chairman Industrial Commission of Minnesota; vice-president, Mr. C. A. McHugh, member Industrial Commission of Virginia; secretary-treasurer, Mr. Ethelbert Stewart, United States Commissioner of Labour Statistics.

A number of Canadian representatives were elected to various committees. Mr. Fred W. Armstrong, vice-chairman of the Workmen's Compensation Board of Nova Scotia, was placed on the Executive Committee. Mr. H. G. Wilson, Commissioner of the Workmen's Compensation Board of Manitoba, was placed on the Committee of Statistics and Costs. Dr. M. D. Morrison, chief medical officer of the Workmen's Compensation Board of Nova Scotia, was placed on the Medical Committee, and Mr. R. B. Morley of the Ontario Safety League, was placed on the Safety Committee.

The following Canadian bodies are among the active members, the Department of Labour of Canada, and the Workmen's Compensation Boards of Manitoba, New Brunswick, Nova Scotia and Ontario. Among the associate members are: The Industrial Accident Prevention Association, Toronto, and the Ontario Safety League, Toronto. As a former president of the Association, Mr. George A. Kingston, member of the Ontario Workmen's Compensation Board is an honorary life member.

The next meeting of the Association will be held in St. Paul, Minn., next September.

#### **Workmen's compensation for farm workers in France.**

The government of France by an Act dated December 15, 1922, has extended the existing legislation on workmen's compensation for accidents, with suitable modifications, to cover manual and non-manual workers and servants (other than exclusively personal servants) employed in agricultural undertakings, as well as in stock-raising and training establishments, stud farms, and in warehouses, shops and enterprises of all kinds subsidiary to agricultural undertakings. Men employed as gardeners are regarded as agricultural workers. Small farmers, working alone, or with the aid of members of their

family, or with occasional assistance, are exempted from liability under the Act; but they may place themselves within its scope by insuring the members of their family or their occasional assistants against accidents. By this means the benefit of certain guarantees, in regard to the payment of compensation, provided for under existing legislation, is secured for the latter class of workers. A similar concession is made to all farmers, whether subject to the law or otherwise, who insure themselves against accident. The new act comes into force one year after the official publication of the regulations for its administration, which are to be issued within six months of the date of its promulgation.

The original Workmen's Compensation Act of 1898 covered, by implication, only such agricultural workers as were employed in establishments in which machinery run by motive power other than that of men or animals was utilized.

**Franco-Belgian  
Convention for  
reciprocal  
treatment  
of miners.**

A convention has recently been concluded between France and Belgium for the purpose of securing for their respective workers when employed in the other country the benefits of the special miners' pension schemes in effect in the country in which they are employed. This convention is in accordance with the recommendation concerning reciprocity of treatment of foreign workers which was adopted at the First International Labour Conference (League of Nations) held at Washington in 1919. Under the terms of the convention, a French worker who proves that he has been employed for thirty years in Belgium mines and also fulfils the other conditions as to age and continuity of employment required by legislation on the subject is entitled to grants from the State and provident funds. A French worker in a Belgian mine is

entitled to the State premiums respecting old age pensions, without regard to the conditions respecting residence. A Belgian worker, who at the age of 55, proves that he has been employed in French mines for thirty years representing 7,920 actual working days, or has spent thirty years as a wage-earner in France, fifteen of which have been spent in the mines, is to be on terms of equality with the French worker respecting grants and bonuses paid by the French Government and by the Independent Fund for miners' pensions.

It is reported that similar conventions have been agreed upon in a large number of countries, and the International Labour Office has been informed that Acts providing for reciprocity of treatment of foreign workers have been passed in Argentine, Czecho-Slovakia, Italy, Luxemburg, the Netherlands and Poland.

**Wages of  
unskilled and  
skilled workers  
in Germany.**

Press reports state that recent adjustments in the pay of common labour in Germany have constantly reduced the spread between skilled and unskilled groups, so that there is no incentive to an ambitious worker to increase his efficiency. Employers in the Berlin chemical industry early in November proposed a reduction in wages in the group of unskilled workers, but met with a flat rejection by the unions. The probability now is that the very small margin between the two classes may be entirely wiped out. A recent report from the United States commercial attaché in Berlin furnishes detailed statistics which show that in coal mining unskilled labour received 92 per cent of the pay given to skilled labour; in the paper industry the percentage runs from 96 to 99; in textiles from 89 to 92; and in metal industries from 92 to 98, with the exception of plants at Breslau and Nuremburg, where special conditions obtain. At

the present time untrained boys are doing the work of skilled mechanics and artisans and receive almost the same pay. It is unlikely that they will voluntarily undergo an arduous course of training, unless it promises ample reward in pay far above that which they at present receive.

#### **Workers' Education in United States.**

At the last convention of the American Federation of Labour, a resolution was passed which declared that "Workers' Education is the very basis of a permanent and responsible workers' organization" and that "adult education is an indispensable part of democratic citizenship and should be universal and life long." It recommended that negotiations with the Workers' Education Bureau be continued for the promotion of a comprehensive scheme of adult workers' education, and urged upon all labour organizations "the appointment of educational committees for furthering such a programme of adult workers' education." The Executive Council of the American Federation of Labour has since named the following representatives to fill three vacancies on the executive committee of the Bureau: John Frey, editor Moulders' Journal, International Moulders' Union; Matthew Woll, vice-president American Federation of Labour; and George W. Perkins, president Cigar-makers' International Union. In addition to these the executive committee of the Bureau is composed of seven other representatives of labour. It is proposed to issue an appeal to the American labour movement to join forces under the leadership of the Workers' Education Bureau to establish trade union colleges and study classes throughout the country. It is stated that over a hundred study classes with upwards of 20,000 members have already been organized by workers for such subjects as history, economies, government labour law and

public speaking. The Bureau has in preparation a series of text books for class use, which are to be issued under the general title "The Workers' Bookshelf."

The Amalgamated Temple Library of New York City has recently been opened by the Amalgamated Clothing Workers of America. It contains at least 1,000 volumes, also magazines, pamphlets and newspapers in English, Yiddish, Italian, Russian and other languages. It is free to all members both for reading at the library and as a circulation library. The education department, it is stated, hope to build up around the library a regular centre for reading, study and constructive instruction. In December, the library of the Cleveland Joint Board of the Clothing Industry was opened officially. This library will serve as a branch of the Public Library of the City of Cleveland. It contains volumes in many languages.

#### **Department of Social Affairs in Japan.**

A new Department of Social Affairs was created in Japan by an Imperial Ordinance which came into force on November 1, 1922. In this new department will be concentrated departments which have recently dealt with labour questions, the Department of Social Affairs of the Home Office, the Labour Section of the Department of Agriculture and Commerce, and the Factory and Mining Departments. It will be under the control of the Minister of Home Affairs and will deal with the following matters:—(1) General labour questions; (2) the administration and enforcement of the Factory Act; (3) protection of miners as prescribed by the Mining Act; (4) social insurance; (5) relief and prevention of unemployment; (6) international labour; (7) poor relief; (8) protection of children; (9) relief of families of soldiers on service; (10) other social welfare work; (11) labour statistics.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION.

### The Labour Market, Strikes, Prices.

#### The Labour Market.

**F**URTHER contractions in employment were reported during December, representing a continuation of the seasonal losses recently noted, augmented by decreases incidental to the holiday and mid-winter inventory period. In spite of these very large declines, the level of employment continued to be higher than during the same month of 1921, when important reductions in staff had also been indicated. At the beginning of January the percentage of unemployment among members of trade unions stood at 6.4 as compared with 6.2 at the beginning of December, and with 15.1 at the beginning of January, 1922. In those percentages no account has been taken of part-time workers, these being included among those employed. The offices of the Employment Service reported a further contraction in business during December, the number of applications registered, vacancies reported and placements made showing considerable declines.

#### EMPLOYERS' REPORTS

The volume of employment as reflected in reports received by the Dominion Bureau of Statistics showed a further decline at the end of December. The seasonal losses indicated during the preceding month continued and were supplemented by heavy contractions in the manufacturing industries due to the holidays and to inventory taking. The index number, however, continued to stand several points higher than during the same period of the preceding year. Reductions in employment were recorded in every district, those in Quebec and Ontario being the most extensive. Firms in all cities registered curtailment of operations. The shrinkage in

Montreal was especially pronounced, the temporary closing of the railway car shops over Christmas and the New Year causing large reductions in staff which were supplemented by important losses in other branches of the manufacturing industries, notably in textile, tin, sugar, and tobacco factories, and in shipping and stevedoring, in construction and on the street and electric railways. In Toronto large reductions in personnel were indicated in garment, biscuit, chocolate, confectionery, lead, tin and box factories. The construction industries, moreover, were very much slacker and further losses were registered by the street railways. Sawmills in Ottawa reported another decrease; contractors also afforded less employment, while telephone staffs were somewhat reduced owing to holidays. In Hamilton knitting mills, iron, steel and tobacco works reported the bulk of the shrinkage. Biscuit, confectionery, brick and textile plants in Winnipeg recorded considerable declines in activity, while the construction trades also were slacker. In Vancouver the decreases were of a general character; tanneries, sawmills and shipyards registered contractions, and employment on building construction and on the street railways also declined. An analysis of the returns by industrial groups shows that all industries except logging and retail trade suffered from the general depression recorded at the end of the year, the gains in those two groups being of a seasonal character. The manufacturing industries were especially slack; the construction, transportation, mining, communication and service group also reported curtailment. Employment in the majority of these industries, however, was on a higher level than at the end of December, 1921.

An article elsewhere in this issue gives in some detail the employment situation during December as reported by employers.

**TRADE UNION REPORTS**      Statements tabulated from 1,469 trade unions with an aggregate membership of 155,006 persons indicated a slightly less favourable situation at the end of December than at the close of the preceding month, the percentage of idleness standing at 6.4 as compared with 6.2 on November 30, and with 15.1 on December 31, 1921. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.) Less work was afforded in all provinces, except Quebec, where, owing to greater activity among garment workers, employment was on a somewhat higher level. In comparison with the corresponding month in 1921 increases were registered in all provinces, the improvement being especially marked in Quebec. Unions in the manufacturing industries reported a smaller percentage of idleness than in the previous month, garment workers being much more fully engaged. In the other branches of the manufacturing industries less employment was manifest, but the decreases were not sufficient to counterbalance the increase in the garment trade. Within the iron and steel group more employment was afforded boilermakers and iron shipbuilders, and carmen, a considerable amount of short time being reported

by the latter. Machinists and moulders registered considerable unemployment due to holiday closing. Glass workers, who form a small percentage of the members reported in the manufacturing industries, indicated considerable slackness during the month. The installation of a new furnace in an Ontario plant was responsible for the unemployment reported in that province. Coal miners in Nova Scotia reported slightly improved conditions while in Alberta and British Columbia practically no change in the situation occurred. Unions in the building trades registered over 8 per cent more unemployment than in November, all provinces sharing in the decline. Bridge and structural iron workers, and electrical workers were busier, but considerable declines were shown by bricklayers, masons and plasterers, and carpenters and joiners, whose returns compose over 64 per cent of the total membership reported for the group. All tradesmen, with the exception of steam shovel and dredgemen, were better employed than in the same month of 1921. The percentage of idleness in the transportation group was slightly greater, owing to slackness in the steam railway division. Street and electric railway employees registered slight improvement, and a nominal change only was reported in the shipping and stevedoring division. Fishermen indicated much larger percentages of unemployment than in November, but the percentage out of work was not so great as in December of 1921. Retail clerks, civic employees, and lumber workers and loggers were less fully engaged than in the previous month. Hotel and restaurant employees and barbers were busier, but theatre and stage employees and stationary engineers and firemen were slightly less active.

A summary of employment during the quarter ending December 31, 1922, as reported by trade unions, appears elsewhere in this issue.

# EMPLOYMENT OFFICE REPORTS

During the month of December, 1922, the offices of the Employment Service made 22,290 references to positions and effected a total of 20,944 placements. Of these the placements in regular employment numbered 13,971 (11,969 of men and 2,002 of women), while those in casual work totalled 6,973. Vacancies reported by employers to the Service during December totalled 24,456, of which 17,616 were for men and 6,840 for women workers. The number of applications for employment registered at the offices was 32,877, of which 25,796 were from men and 7,081 from women. When a comparison is made with the month of November, 1922, a slight decline is shown in the volume of business, while compared with the month of December, 1921, an improvement in employment is noted.

A detailed report of the employment offices for the month of December, 1922, and a report covering the fourth quarter of 1922 (October-December) may be found elsewhere in this issue.

# BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics, the value of building permits issued in 56 cities during December showed a slight decline from the November level, although the total was considerably higher than in December of any recent year. The estimated value of the permits issued during the month was \$9,058,473, as compared with \$9,176,861 in November and \$5,183,280 in December, 1921. Particulars with respect to the permits issued are given elsewhere in this issue.

According to the Canadian Building Review, issued by MacLean's Building Reports, Limited, the value of the contracts awarded during December amounted to \$52,472,400 as compared with \$21,453,900 in November and with \$19,118,500 in December of last year. There was, therefore, an increase

of 144.6 per cent in the former and of 174.5 per cent in the latter comparison. Of the total for the month under review, \$256,100, or .5 per cent was to be spent in the Maritime Provinces, \$48,829,700, or 93.0 per cent, in Quebec and Ontario; and \$3,386,600, or 6.5 per cent in the Western Provinces. A further analysis of the total for the month shows that \$6,526,300 was to be spent on residences, \$6,890,300 on business establishments, \$2,523,000 on industrial buildings, and \$36,532,800 on engineering contracts.

# PRODUCTION REPORTS

The Dominion Bureau of Statistics reports that the production of pig iron during December was 4.7 per cent above the record of the previous month, the tonnage being 35,891 long tons and 34,289 long tons respectively. The average monthly production throughout the year was 31,921 tons and the December output exceeded the average by 12.4 per cent. The total production of pig iron in 1922 was 383,057 tons, a drop of 211,297 tons, or 35.5 per cent from the previous year. The production of ferro-alloys during December was 2,246 tons. Four blast furnaces were active in December as in the previous month, two of these being at Sydney and one each at Sault Ste. Marie and Hamilton.

Steel production in December fell 4,763 long tons below the November output, the tonnage being 46,655 tons and 51,418 tons in the previous month. The total production during 1922 was 485,643 tons, a drop of 181,841 tons, or 27.3 per cent from the previous year.

A report from the Department's correspondent at Cobalt states that seven cars containing about 484,500 pounds of silver ore were shipped from the Cobalt Camp during December, as compared with 17 cars containing about 1,308,400 pounds in the previous month. The Nipissing Mine shipped 352 bars containing 405,297 ounces of silver, and the Mining Corporation of Canada shipped 405 bars containing

410,735 ounces, making a total of 757 bars containing 606,032 ounces of silver for December, as compared with 422 bars containing 455,986 ounces for the previous month.

A report from the British Columbia Forestry Branch shows that 120,934-475 feet B.M. were scaled in that Province during December. This total includes Douglas Fir, 59,741,650 feet, Red Cedar, 24,228,466 feet, Hemlock, 16,720,201 feet, Spruce, 7,919,119 feet, Larch, 5,723,013 feet, Yellow Pine, 2,377,284 feet, White Pine, 1,465,232 feet, Jack Pine, 1,663,873 feet, Balsam, 1,042,694 feet, Cotton Wood, 37,625 feet and other species, 15,318 feet.

The gross earnings of the Canadian National Railways (including electric lines), according to a preliminary statement issued, amounted to \$10,685,573 in December, as compared with \$11,666,289 in December, 1921. The total earnings for the year are given as \$120,086,243 as compared with \$127,002,467 for 1921. The gross earnings of the Canadian Pacific Railway Company for December were given in a preliminary statement as \$17,365,639 in comparison with \$15,756,923 for 1921. The total earnings for the year 1922 were given as \$186,675,035 in comparison with \$193,021,854 for 1921.

### Strikes

The time loss due to industrial disputes reported to the Department during January was less than during December, 1922, and also less than during January, 1922. There were in existence at some time or other during the month 14 strikes involving about 2,580 workpeople with an estimated time loss of 51,890 working days, as compared with 15 strikes involving 3,018 workpeople and resulting in a time loss of 60,561 working days in December, 1922, and 23 strikes, 3,357 workpeople and 76,070 working days in January, 1922. On January 1, 1923, there were on record

13 strikes, affecting 2,365 workpeople. One new strike was reported as having commenced during January, as compared with three during December. This strike, involving 670 workpeople and a time loss of 2,600 working days, was terminated during the month, leaving 13 strikes involving 1,910 workpeople on record at the beginning of February.

### Prices

The movement in wholesale prices during January was slight, the index number for the month standing at the same level as in December, while the cost of the family budget in terms of retail prices at the beginning of January advanced somewhat over that at the beginning of December.

In wholesale prices the index number stood at 223.0 for January, the same figure as for December, 1922, as compared with 227.7 for January, 1922; 281.3 for January, 1921; 356.6 for May, 1920 (the highest point reached), and 136.5 for January, 1914. Agricultural products and foods were generally lower, while nearly all other groups were slightly higher. The principal declines were in grains and fodder, dairy products, fish, fruits and vegetables, though these groups also showed some advances. The chief advances, however, occurred in miscellaneous foods, such as bread-stuffs and sugar, in fuel, building materials, textiles and in sundries.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in sixty cities was \$10.52 at the beginning of January as compared with \$10.39 at the beginning of December, 1922; \$11.03 for January, 1922; \$14.48 for January, 1921; \$16.92 for June, 1920 (the highest point reached), and \$7.73 for January, 1914. Including the cost of fuel and rent with that of foods the figures averaged \$21.18 at the beginning of January as compared with

\$20.97 for December, 1922; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92 for July, 1920 (the highest point reached), and \$14.49 for January, 1914. Meats and dairy products account-

ed for most of the increase in foods though potatoes and sugar were also slightly higher. Evaporated apples and salt pork were down somewhat. Fuel and rent were slightly higher.

## IMPORTS AND EXPORTS DURING DECEMBER, 1922.

Summary for calendar years 1921 and 1922.

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of December, 1921 and 1922, and for the nine months ending in December of those years, and the ex-

ports domestic and foreign of similar classes of goods for the same periods.

The following table shows the imports free and dutiable and the exports, domestic and foreign, of the various classes of products, for the month of December, 1922:

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
Agricultural and vegetable products, mainly foods	\$ 2,520,951	\$ 6,398,395	\$ 61,373,047	\$ 54,671
Agricultural and vegetable products, other than foods	1,640,408	3,205,512	3,618,426	326,020
Animals and animal products.....	1,995,201	2,333,792	11,507,316	157,715
Fibres, textiles and textile products.....	6,090,343	8,112,977	418,948	124,534
Wood, wood products and paper.....	1,131,130	1,795,363	19,290,437	27,709
Iron and its products.....	931,040	8,834,718	5,605,552	205,270
Non-ferrous metals and their products.....	711,125	2,210,275	4,286,260	41,910
Non-metallic minerals and products.....	7,695,982	8,375,129	2,223,609	106,793
Chemicals and allied products.....	935,895	1,134,503	1,258,702	10,798
Miscellaneous commodities.....	1,531,234	2,648,915	1,288,728	109,178
Totals .....	\$25,183,309	\$45,049,579	\$110,870,825	\$1,164,596

In December, 1922, the duty collected amounted to \$10,347,028 as compared with \$9,911,508 in December, 1921.

The following comparative table shows the values of merchandise en-

tered for consumption and the merchandise, domestic and foreign, exported in the months of December, 1921 and 1922, and in the nine months period ending December of those years, respectively:

	Month of December		Nine months ending December	
	1921	1922	1921	1922
	\$	\$	\$	\$
Merchandise entered for consumption.....	60,050,166	70,232,888	562,655,098	577,218,075
Merchandise, domestic, exported.....	86,304,163	110,870,825	588,456,838	732,576,141
Total .....	146,354,329	181,103,713	1,151,111,936	1,309,794,216
Merchandise, foreign, exported.....	881,551	1,164,509	10,520,520	10,649,459
Grand total, Canadian trade.....	147,235,880	182,268,309	1,161,632,456	1,320,443,675

## Summary for years 1921 and 1922.

The Dominion Bureau of Statistics has recently issued a report respecting imports and exports during the past three years by classes of goods which

practically correspond to the classes used in the table above. The report gives the following figures for 1921 and 1922.

Classes of goods	Imports for year		Exports for year	
	1921	1922	1921	1922
	\$	\$	\$	\$
Agricultural and vegetable products.....	197,683,617	159,059,173	357,523,011	397,375,826
Animal products.....	43,793,277	47,657,342	141,335,176	135,441,651
Fibres and textiles.....	129,294,178	160,120,522	7,875,525	6,918,006
Wood and paper.....	38,239,672	35,038,429	186,092,991	213,145,383
Iron and its products.....	127,410,117	126,467,856	32,620,942	41,800,812
Non-ferrous metals.....	31,516,560	34,952,616	27,214,004	39,549,486
Non-metallic minerals.....	153,017,057	127,363,257	25,034,872	21,140,005
Chemical products.....	25,014,118	25,690,382	10,292,343	12,484,006
Miscellaneous.....	53,449,887	45,989,682	14,710,956	13,503,828
Total imports.....	799,478,483	762,339,309		
Dutiable goods.....	546,857,816	513,330,771		
Free goods.....	252,620,667	249,008,538		
Duty collected.....	122,575,653	132,167,544		
Total exports (Canadian).....			802,690,820	884,362,583
Foreign exports.....			13,994,461	13,815,268
Total exports.....			816,694,281	898,177,851

### PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JANUARY, 1923.

**N**O reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in January.

#### Applications received.

An application for the establishment of a Board was received from the Mayor of Edmonton, which was made under Sections 63a and 63b of the Act, in connection with a dispute between various coal mining companies operating in the Edmonton district and their employees, being members of District 18, United Mine Workers of America. The application was subsequently withdrawn.

#### Other Proceedings under the Act.

In the case of a dispute between the Canadian National Railways, Western Lines, and certain of its employees, being members of the International Brotherhood of Steam Shovel and

Dredgemen, District No. 6, a Board was established composed as follows: Mr. W. H. Trueman, K. C., Winnipeg, chairman, appointed by the Minister in the absence of a point recommendation from the other two members of the Board, Messrs. C. E. Dafoe and David Campbell, both of Winnipeg, nominees of the Railways and employees respectively.

In the case of a dispute between the Canadian Pacific Railway Company, Western Lines, and certain of its employees, being members of the International Brotherhood of Steam Shovel and Dredgemen, District No. 6, a Board was established composed as follows: Mr. W. H. Trueman, K. C., Winnipeg, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Messrs. C. E. Dafoe and David Campbell, both of Winnipeg, nominees of the Company and employees respectively.

## STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1923.

THE following table shows the number of strikes in existence in Canada at some time or other during January, 1923, reported to the Department, together with the number of employees involved and the time loss in working days, as compared with the previous month and with January, 1922.

	Dis- putes	No. of employees involved	Time loss in working days
January, 1923.....	14	2,580	51,890
December, 1922.....	15	3,018	60,561
January, 1922.....	23 <sup>1</sup>	3,357	76,070

Of the total time loss in January, 51,890 working days, about 70 per cent, that is 35,820 working days, appeared in the printing and publishing group, due to the ten strikes of compositors and pressmen, most of which began in June, 1921, for the forty-four hour week. There was, however, a time loss of 13,000 working days in the mining group, due chiefly to two strikes of coal miners in the neighborhood of Edmonton.

One new strike was reported during January, that of coal miners at Michel, B. C. This strike involved 670 men for four days, the resulting time loss being, therefore, only 2,680 working days.

Thirteen strikes involving 2,365 workpeople were carried over from December, but by the end of January the number of workers involved was reduced to 1910, the time loss for the month due to these strikes being estimated therefore at 49,660 working days. At the end of the month there were still on record the same thirteen strikes as at the end of December, namely: coal miners, Cardiff coal fields, Alberta; coal miners, Edmonton, Alberta; photo engravers, Montreal; printing compositors,

Hamilton; three strikes of printing compositors, Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver, and street railway motormen and conductors at Niagara Falls.

### Disputes by Industries.

The following is a review of disputes by those groups of industries in which strikes or lockouts occurred during the month, in the order in which they appear in the statistical table.

### MINING, NON-FERROUS SMELTING AND QUARRYING

The two strikes of coal miners in the immediate neighborhood of Edmonton and in the Cardiff field a short distance North of Edmonton, which had begun early in December and at the end of November respectively, for recognition of union and better working conditions, were unsettled at the end of January, but a number of miners in both cases had returned to work and a number had been replaced. A number of pickets were arrested in some cases for assault and in other cases for unlawful assembly, but most of these were released on suspended sentence.

At Michel, B.C., 670 coal miners went on strike on January 3 as a result of a dispute over working conditions and were out for four days, returning to work on January 8, on the understanding that the dispute would be settled by negotiations between the union officials and the employing company's representative. Some of the points of the dispute together with a number of other disputes between the employees and the coal mine operators in several mines in

## STRIKES AND LOCKOUTS DURING JANUARY, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Particulars
(a) Strikes commencing prior to January, 1923.			
MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Cardiff coal field, Alberta.	200	5,200	Commenced November 21, 1922, for recognition of the union and improved working conditions. Terminated.
Coal miners, Edmonton coal field, Alberta.	300	7,800	Commenced December 1, 1922, for recognition of union and improved working conditions. Terminated.
MANUFACTURING—			
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que...	30	780	Commenced May 2, 1921, for shorter hours. Terminated.
Printing compositors, Hamilton, Ont.	38	988	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Terminated.
Printing compositors, Montreal, Que.	21	546	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Terminated.
Printing compositors, Montreal, Que.	205	5,330	Commenced July 1, 1921, for increased wages and 44-hour week. Terminated.
Printing compositors, Montreal, Que.	25	650	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the Union. Terminated.
Printing compositors, Toronto, Ont.	662	17,212	Commenced June 1, 1921, for increased wages and 44-hour week. Terminated.
Printing compositors, Winnipeg, Man.	190	4,940	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Terminated.
Printing compositors and pressmen, Halifax, N.S.	51	1,326	Commenced May 2, 1921, for shorter hours with same weekly wages. Terminated.
Printing compositors and pressmen, Ottawa, Ont.	139	3,614	Commenced June 1, 1921, for increased wages and 44-hour week. Terminated.
Printing compositors and pressmen, Vancouver, B.C.	34	884	Commenced May 2, 1921, for increased wages and 44-hour week. Terminated.
TRANSPORTATION—			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	15	390	Commenced July 1, 1922, for recognition of the union. Terminated.

## (b) Strike commencing during January, 1923.

MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Michel, B.C.....	670	2,680	Commenced January 3, 1923, dispute as to working conditions. Work resumed January 8, 1923; dispute referred to Joint Committee under existing agreement.

District 18 of the United Mine Workers of America in Alberta and British Columbia, were referred to a Joint Committee as provided by clause C in the agreement between the Western Coal Operators' Association and District 18 of the United Mine Workers of America. (This agreement was in effect from April 1, 1920, to March 31, 1922, and was printed in the LABOUR GAZETTE for August, 1920, page 1048. The general terms of this agreement were renewed until March 31, 1923, by an agreement dated August 23, 1922, at the close of the strike which began on April 1, 1922. This new agreement was printed in the LABOUR GAZETTE September, 1922, page 955.) Under the terms of the agreement Mr. W. E. Knowles, who had been chairman of a Conciliation Board in the District in April, was appointed Independent Chairman by the Minister of Labour.

## MANUFACTURING

*Printing and Publishing.*—No changes were reported in the strikes in this group during the month except that a number of the strikers secured work elsewhere. Ten strikes were still in existence and involved 1,395 workpeople and an estimated time loss of 35,820 working days. Nine of these had begun in the spring or summer of 1921 and the other in September, 1922.

## TRANSPORTATION

*Street and Electric Railways.*—The strike of the motormen and conductors of the Park and River Division of the International Railway at Niagara Falls, Ontario, was unsettled at the end of January but the number of employees on strike was reduced to fifteen by the end of the month, a number having found work with other employers.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING DECEMBER, 1922.

### Summary of disputes for 1921 and 1922.

**T**HE British Ministry of Labour Gazette for January contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland, during December, 1922, based upon returns from employers and workpeople.

**NUMBER, MAGNITUDE AND DURATION.**—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in December, in Great Britain and Northern Ireland, was 21, as compared with 34 in the previous month and 31 in December, 1921. In these new disputes 2,800 workpeople were directly involved and 600 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition, 4,000 workpeople were involved, either directly or indirectly, in 28 dis-

putes which began before December, and were still in progress at the beginning of the month. The number of new and old disputes was thus 49, involving 7,400 workpeople, and resulting in a loss during December of 72,000 working days.

The number of disputes in progress in December and the number of workpeople involved therein were lower than for any month since the early part of 1917.

The number of working days lost through disputes, though slightly higher than in November, was lower than in any previous month since February, 1917.

**CAUSES.**—Of the 21 disputes beginning in December, 9, directly involving 1,200 workpeople, arose out of proposed reductions in wages; 5, directly involv-

ing 400 workpeople, on other wages questions; 4 directly involving 1,000 workpeople, on questions respecting the employment of particular classes or persons; and 3, directly involving 200 workpeople, on other questions.

**RESULTS.**—Settlements were effected in the case of 15 new and 15 old disputes, 8, directly involving 800 workpeople in both instances. Of these disputes, 8, directly involving 800 workpeople, were settled in favour of the workpeople; 8, directly involving 1,300 workpeople, in favour of the employers; and 14, directly involving 1,900 workpeople, were compromised. In the case of three disputes, directly involving 800 workpeople, work was resumed pending negotiations.

The accompanying table analyses the disputes in progress in December, in Great Britain and Northern Ireland, by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all the disputes in progress.

#### Trade Disputes in 1921 and 1922.

The total number of trade disputes involving stoppages of work reported to the Department as beginning in 1922, in Great Britain and Northern Ireland, was 565, compared with 763 in 1921. About 555,000\* workpeople were involved, either directly or in-

Groups of Industries	No. of disputes in progress in December			Number of workpeople involved in all disputes in progress in December	Aggregate duration in working days of all disputes in progress in December
	Started before December 1.	Started in December.	Total		
Building .....	5	2	7	200	1,000
Mining and quarrying .....	5	4	9	2,700	30,000
Metal engineering and shipbuilding .....	8	3	11	1,300	14,000
Transport .....	3	4	7	700	5,000
Other trades .....	6	7	13	1,900	8,000
Employees of public authorities...	1	1	2	600	14,000
Total, Dec., 1922	28	21	49	7,400	72,000
Total, Nov., 1922	21	34	55	9,100	68,000
Total, Dec., 1921	48	31	79	13,700	118,000

directly, and 19,900,000 working days were lost through disputes which began in 1922, or which began before 1922 and were still in progress at the beginning of that year. These totals are the lowest recorded for any year since 1918.

In 1921 about 1,829,000\* workpeople (including over 1,100,000 workpeople involved in a notional stoppage in the coal mining industry) were involved in disputes having an aggregate duration of approximately 86,000,000 working days.

\*Workpeople involved in more than one dispute during the year are counted more than once in the totals of the year. The extent of such duplication is not very considerable, except in the coal mining group, where, in 1921, about 100,000 workpeople were involved in more than one dispute.

### ANNUAL CONVENTION OF THE ALBERTA FEDERATION OF LABOUR.

**T**HE tenth annual convention of the Alberta Federation of Labour was held at Medicine Hat on January 8 to 12, under the presidency of Mr. Frank Wheatley, with about 100 delegates present.

The officers' reports showed that despite general depression in business there was no decrease in membership from the previous year and that new

affiliations during the year included locals of the following trades: fire fighters, Lethbridge, and railway carmen, steam and operating engineers, teamsters, and railway and steamship clerks, of Edmonton. The United Mine Workers of America were reported to have become re-affiliated with the Lethbridge Trades and Labour Council. The miners in the Edmonton district

were reported to have been organized and their locals, as well as nearly all the other labour organizations to have affiliated with the Edmonton central council of the Canadian Labour Party, which had been formed to consolidate the labour forces in so far as the political field was concerned. The financial statement showed the receipts for the year as \$2,967 and the expenditures as \$2,209, leaving a balance of \$758. The co-operative store started at Lethbridge in 1921 was reported as being a success. A delegate from District 18, United Mine Workers of America, reported that a successful educational campaign was being carried out at Canmore, that a debating club met every two weeks, and that the Alberta University Extension Lectures were given monthly and a class on political economy met weekly, the attendance at the debates and lectures ranging from 50 to 75 while the economic class had 16 students. The Canmore local of the United Mine Workers had also interested itself in the naturalization of eligible foreign-speaking people and been successful in having a large number of them become citizens of the country.

#### REQUESTS FOR LEGISLATION.

The reports further showed that following the last convention some 41 requests for legislation were presented by the executive to the provincial government, with regard to many of which it was claimed no action had been taken at the 1922 session of the legislature. A Minimum Wage Act had been passed, however, also an act providing for the creation of a Bureau of Labour. Mr. Walter Smitten, the Federation's secretary, had been appointed Commissioner of Labour for the Bureau and assumed office on July 1, last. In December last, at the request of the Government the executive again presented a memorandum asking for legislation as follows: Amendments to the Workmen's Compensation Act and for a medical aid scheme to guarantee adequate medical and hospital treat-

ment for sickness and accident for workers and their families, the cost of administration to be borne by the workers themselves; an Industrial Conditions Act; amendments to the Coal Mines Act; a new Mechanics' Lien Act to guarantee adequate protection to the wages of the workers; free treatment and care of consumptives in sanitoriums; a measure to compel operators of industries (where townsite and houses are owned exclusively by operators) to provide adequate family accommodation for their employees and rooming accommodation for single men with not more than two men to one room; amendments to the Boilers Act to permit competent and qualified persons to sit for examinations without having to have previously worked at firing boilers; regulation of employment of women in factories, shops and offices, for a period before and after childbirth, and of women and young persons on night work; the financing by the government of educational facilities of the province and the providing of all school supplies, and medical, surgical, dental and optical treatment to all school children; compulsory school attendance for all children up to 16 years of age; the proportional representation system of voting for provincial and municipal elections, and that persons whose occupation requires them to be absent from their electoral district on election day, or who are patients in hospitals, be enabled to vote; that election day be a public holiday; the prohibition of air or electric hammers in the fabrication of cut stone; the sale of beer under government control, with a maximum alcoholic content of 3½ per cent; regulation of the hours of labour of permanent fire department employees; amendments to the Mothers' Allowance Act; pending a scheme of unemployment insurance, employment through public works, or, failing such, relief in needy cases; a maximum 44-hour week for all workers and at least one day's rest in seven; prohibiting government labour bureaus from receiving and filling orders for workmen at wages and conditions

not in accordance with those agreed upon between groups of employers and workmen.

The government had assured the delegation that some changes would be made in the Workmen's Compensation Act, possibly increased indemnities to 66 2/3 per cent of earnings instead of 55 per cent, as at present, and that the executive would receive a copy of the proposed changes before they were introduced in the legislature. The government would not consent to introduce an Industrial Conditions Act such as was submitted by the Federation, but stated that it was contemplating the introduction of an Industrial Disputes Act, a draft of which was then being prepared. Consideration was promised in regard to amendments to the Coal Mines Act, that the hours of labour in fire departments would be taken up with the cities affected, that it was probable proportional representation would be adopted before another provincial election and a new election act passed, also that a petition for a referendum on the Liquor Act would likely be presented. The financing of educational facilities and supplying of school books, it was claimed, were matters to be dealt with by the municipalities, and that the question of employment of women and young persons on night work would be dealt with by the Minimum Wage Board. There were not enough women employed in Alberta to call for legislation prohibiting the employment of women before childbirth. It was announced that the government had been considering amendments to the Mothers' Allowance Act but the increased expense would be considerable and it was doubtful if the Act would be amended. Every possible attention was promised regarding the unemployment problem; it was stated that public works were being carried on including clearing roads, getting out timber for bridges and ties, and the building of two new court houses. No action was promised regarding other items mentioned in the memorandum.

## RESOLUTIONS.

The convention appointed a committee to investigate conditions surrounding the strike at the Edmonton coal fields, and decided to request labour members of the Dominion and provincial parliaments to co-operate with this committee, and that District 18 consider the necessary action to bring about a successful issue of the strike and advise the Federation. Several proposed amendments to the Mines Act were endorsed. These included a six-hour day and a five-day week; no workman to be underground more than six hours during any consecutive twenty-four hours; wages to be paid weekly on Friday between 10 a.m. and 5 p.m.; first-aid stations to be established inside the mines at convenient places, accessible at all times during working hours; a minimum scale of wages to govern all coal mines in the province, to be agreed upon and recognized by coal operators and the executive of District 18.

Several proposed amendments to the Workmen's Compensation Act were again endorsed. With regard to the Minimum Wage Act it was recommended that clause 3 of the act regarding female labour applying simply to the cities and towns be struck out; that there should be no provision for probationary periods; that the remuneration for periods of apprenticeship are not sufficient; that the minimum wage in the award is not a sufficient amount; that the act should include boys under 18 years of age; that the Board should keep up to date a tabulation of all apprentices and at stated and definite periods take note of the progress of each apprentice; that a stated number of hours should be provided for females in mercantile stores; and that no female, except nurses, should be employed at any time between 11.30 p. m. and 6 a. m. It was decided to ask the government to introduce a form of legislation that would insure adequate conciliatory measures being taken in all industrial

disputes, and to request the government to fill boiler inspectors' positions with practical boilermakers instead of with civic engineers with no practical experience at the trade; to place contracts for school books within the province; to have wages of one-man street car operators standardized at 15 cents per hour over and above the rates paid to two-men car operators; to have the eight-hour day strictly enforced in bakeries and bakeshops and that no actual work be done in such concerns, except by dough mixers, between 11 p. m. and 5 a. m.; and that legislation be enacted to provide pensions to members of paid fire departments. It was also decided that the secretary of the Federation should open up a circulation library of pamphlets and books that will at all times be available to members at minimum cost, and to urge the Trades and Labour Congress to promote the amalgamation of the existing

craft unions into industrial unions, one union for each industry. The convention also requested that charters of federal labour unions be opened with a view to organising the unorganized workers in the province. It was decided to urge the government to hold a plebiscite on liquor control and sale and that the voting be by preferential ballot. A motion expressing disapproval of what appeared to be discrimination against single men by labour bureaus was adopted and the executive instructed to take the matter up with the government. A resolution favouring affiliation with the "Moscow Red International" of Labour Unions was rejected.

Mr. Frank Wheatly was re-elected as president of the Federation and Mr. Elmer E. Roper was elected as secretary-treasurer.

Drumheller was chosen as the place of meeting for the next Convention.

### LEGISLATION REQUESTED BY ORGANIZED LABOUR.

**I**N the month of January representatives of the Trades and Labour Congress of Canada and other labour organizations waited upon members of the Dominion government and the provincial governments of Ontario and Manitoba and presented requests respecting legislation.

#### Requests made to Dominion Government.

On January 22, requests for legislation in accordance with resolutions adopted at the last Trades and Labour convention were made to members of the Dominion government by representatives of the Trades and Labour Congress of Canada on the following subjects: With regard to unemployment, the provision of work was requested by means of (1) the carrying on of all public works and the purchase of public supplies during periods of depression, and the allocating of same to districts where unemployment is most

acute; (2) construction during such periods of needed public buildings and the renewal and repairing of old ones; (3) road building on a large scale; (4) afforestation; (5) clearing and development of agricultural lands; (6) limitation of the work-day to eight hours on all government works; (7) Restriction against unwarranted immigration; (8) loans for the building of workmen's houses.

Control of private industry was advocated with a view to prevent (a) the undue flooding of the labour market by hiring outside of Canada labour obtainable in Canada or labour needed for a limited period only; (b) the laying off of large numbers of workers while orders still remain to be executed or until the hours of all employed in the industry have been materially reduced; (c) by the equalization of employment over longer periods, the elimination as far as practicable of the

rush periods with overtime and quiet periods.

Other requests relating to unemployment included the abolition of private employment agencies and the fullest development of the Employment Service of Canada with Dominion, Provincial and local advisory councils; the institution of unemployment insurance to be paid out of a State unemployment insurance fund obtained by assessments on industry similar to the plan adopted for Provincial compensation funds; the export of raw materials in their highest manufactured form; the release of our natural resources held out of use by private interests and their fullest development, and the encouragement of scientific industrial research to discover commercial uses for articles now considered valueless.

With reference to immigration the delegation recommended:—The continuance of the Canadian National Council of Immigration of Women until the formation of a Dominion Advisory Council of Immigration formed along the lines of the Employment Service of Canada with the Trades and Labour Congress of Canada represented on it; the placing of the Immigration Department under a separate Minister of the Crown, or under the direction of the Minister of Labour; that representation be made to the British Government which would make possible closer supervision of all immigration advertising and control of booking agencies in Great Britain; that no bonus or grants be made to private agencies; that land settlement and colonization schemes be made available for Canadians and others already in Canada; and that immigrants be examined so far as possible at port of embarkation; that the Immigration Act be amended by repeal of those sections which discriminate against British born citizens making them liable to arbitrary deportation, by repeal of amendments passed in 1919,

which they claimed brought within the prohibited classes those exercising the reasonable right of assembly and freedom of speech; by the inclusion amongst prohibited classes of all labour hired outside Canada except it be secured through the Employment Service of Canada, and by the insertion of a clause granting the right of trial by jury before any deportation for political offences. The total exclusion of all Orientals was demanded, and legislation to control more effectively the Orientals already in Canada. The Government was also requested to endeavour to obtain the repeal of the clauses in the Treaty with Japan fixing the status of Japanese in Canada.

Amendments to the Criminal Code were requested to re-establish the right of peaceful picketing, and to repeal those sections referring to "sedition", etc.

Amendments to the Industrial Disputes Investigation Act were requested to impose penalties on companies or corporations violating Section 57 of the Act; to compel parties seeking a change in wages or conditions to make application for a Board in case an agreement is not reached; to substitute in the application for a Board, in place of the declaration under oath "that to the belief of the declarant a strike or lockout will be declared" a simple declaration of failure to reach an agreement by direct negotiation.

Legislation was requested to give effect to the eight-hour day convention of the International Labour Organization in so far as the Dominion government had accepted jurisdiction.

A number of requests made in previous years were repeated. These included amendments to the Election Act to provide for proportional representation and the transferable vote, to make election day a public holiday, to abolish forfeiture of election deposits, and to repeal the clause prohibiting trade unions from contributing to

election campaign funds; legislation in favour of old age pensions, registration of union labels, establishment of joint councils in the civil service, and public ownership and control of natural resources and public utilities. Amendments to the Naturalization Act were requested to enable married women in certain cases to become naturalized, to reduce the period of residence required to three years, and to reduce the fee for naturalization to one dollar.

The abolition of the Sales Tax was urged and action was requested on various other subjects.

#### Ontario.

On January 18, a delegation composed of representatives of the Trades and Labour Congress of Canada and the Workers' Educational Association submitted to the Ontario government a programme of labour legislation, on the line of resolutions passed at the convention of the Congress which was held at Montréal last August, an account of which appeared in the September issue of the LABOUR GAZETTE. The programme included the following proposals: extension of the eight-hour day to all commercial and industrial undertakings, in accordance with the draft convention of the First International Labour Conference (League of Nations); prohibition of the employment of women six months before and after childbirth; further protection of women and children in industrial employment; that proportional representation be given a trial at the next provincial elections; that election day be made a public holiday; the abolition of property qualifications for voting on money by-laws, the adoption of the principle, one-man one vote; provision for the rehabilitation of injured industrial workers by fitting them for

suitable employment; prohibition of the employment of white girls by Orientals; appointment of a labour representative on the Hydro-Electric Commission and on other bodies; government aid for the development of co-operative societies; the licensing of barber shops for the purposes of securing sanitation.

#### Manitoba.

A delegation of labour representatives waited on the members of the provincial cabinet of Manitoba and submitted a programme of labour legislation. Their requests included amendments to the Workmen's Compensation Act to provide for the retraining of injured workmen; an increase in the scale of compensation payments and the granting of compensation payments to a foster mother who assumes the care of the children of a deceased workman on the death of his widow; amendments to the Mothers' Allowance Act to include mothers with one child, mothers whose husbands are confined in public institutions or are physically unable to support their families, and mothers who have been deserted by their husbands for five years; provision that provincial printing be carried out under fair, or trade union conditions; the enactment of a Trade Disputes Act similar to that of Great Britain, which legalizes peaceful picketing; provision for an eight-hour day and a forty-four hour week except for men operating trains; prohibition of the employment of women in industries for two months before and after childbirth, their maintenance during that period to be paid by the provincial government; and the appointment of a commission to collect data with a view to legislation respecting old age pensions and unemployment, sick and disability insurance.

## UNITED MINE WORKERS OF AMERICA NOT PERMITTED TO AFFILIATE WITH "RED TRADE UNION INTERNATIONAL."

THE executive of District 26 of the United Mine Workers of America, which has jurisdiction in Nova Scotia, recently wrote to the International Executive Board of the United Mine Workers asking whether affiliation with the "Red Trade Union International" was permissible. A committee of the Executive Board to whom this matter was referred submitted a report which was unanimously adopted by the Board on January 10. The report was in part as follows:

"Upon an examination of the program and constitution of the Red International, together with resolutions adopted at the last convention of this Organization, we find that among the objects for which the Red International was originally founded, it has for its purpose, first—control, and afterwards the destruction of the bona fide trade union movement. . . . The Red International is an organization similar in character and make-up to the One Big Union. Its program and policies being so shaped that it not only sanctions, but in fact urges the workers to resort to street uprisings, mob demonstrations, violence, or any other method that they may deem expedient for the accomplishment of their purpose. For example, section 45 of the Red International program reads as follows:

The fundamental policy of the trade unions is the direct action of the revolutionary masses and of their organizations against Capital. . . . the task of the revolutionary class-conscious trade union consists in transforming all the expressions of a struggle into an instrument for the social revolution of the working class and its militant training for the social revolution and the establishment of the dictatorship of the proletariat.

"Whilst section 54 of this same organization's program, dealing with the question of collective bargaining, has this to say:

The belief in the sanctity of collective bargaining propagated by the opportunists of all countries must be met with a resolute and decided resistance on the part of the revolutionary trade union movement. Collective bargaining is nothing more than an armistice. The owner also violates these collective contracts whenever the slightest opportunity presents itself. The respect toward collective bargains only proves that bourgeoisie conceptions are deeply rooted in the minds of the leaders of the working class. The revolutionary trade unions without, as a rule, rejecting collective bargains must realize their relative value and clearly define methods which will abolish these contracts when it proves to be profitable to the working class.

"It must be apparent to all who read and think, that this program is in contravention to the policies, customs, practices and laws of the United Mine Workers of America. The membership of our great organization not only believe in the principle of collective bargaining, but also the sanctity of contracts honourably entered into between the representatives of the United Mine Workers of America and the coal operators. In fact, this is the rock upon which our union was founded, and in the practice of this policy we have not only made substantial gains in members, but we have also strengthened our organization in power and influence. . . . It may not be amiss to also add that Section 2, Article 14, of the International Constitution, deprives from membership, and also provides other penalties for those of our members holding membership in any dual organization not affiliated with the American Federation of Labour. . . .

"Toward this union-wrecking movement the usual sentiment within the great and genuine trade unions is regret that anywhere working people can be found so woefully deficient in the knowledge of trade unionism that they will blindly follow the false teachings of the

propagators of such movements. Invariably from their beginnings mushroom organizations of this kind are doomed through their faults of intention and organization to dissension, disruption and destruction. With the passing of time, less and less excuse exists for anything of their nature being brought into existence. Impatient resentment at social wrongs may prompt wild attempts for the abolition of capitalism. Organizations like the Red International may proclaim world happiness through the abolition of collective bargaining, or the inequitable wage system, but it remains for the trade union movement to continue its work with unflinching and direct practicality. It proceeds in safe steps from accomplishment to accomplishment as necessity develops, naturally one step after another. It takes no leap in the dark. It is our purpose to continue the onward march of progress to greater and better days for the United Mine Workers of America through the safe, sane, orderly and lawful methods of the American Labour movement. Our organization has brought to its members

notable and beneficial results, and in the performance of those duties it is destined to ever go forward. We cannot subscribe, give comfort, or sympathy to the promotion of an organization whose chief claim to fame lies in its attempt to destroy institutions such as the United Mine Workers of America.

"It is the decision of your Committee that no unit affiliated with the International Union, United Mine Workers of America, can in conformity with the constitution of our organization, affiliate with the Red International. We would therefore recommend that District 26 be required to withdraw their application for affiliation with this organization, and providing they refuse to comply with the decision of the International Executive Board on this question and affiliate with the Red International, that the autonomy of District 26 be suspended, the International organization assume control of the government of the affairs of that District, and this status be maintained until it has been fully demonstrated that it is the purpose of the membership of District 26 to comply with this ruling."

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA.

Reports by Dominion Bureau of Statistics on (a) Slaughtering and Meat Packing Industry, 1921; (b) Automobile Industry, 1921; (c) Pulp and Paper Industry, 1921.

THE Dominion Bureau of Statistics has recently issued reports for the calendar year, 1921, on the slaughtering and meat packing industry, the automobile industry, and the pulp and

paper industry. Previous reports in this series relating to various industries for the year 1920 were outlined in the issue of the LABOUR GAZETTE for November, 1922, and in previous issues.

### The Slaughtering and Meat Packing Industry in Canada during 1921.

A report of the Dominion Bureau of Statistics on the slaughtering and meat packing industry in Canada during 1921 shows that there were in operation 84 establishments engaged in this industry as compared with 86 in 1920. The following table shows the number by provinces.

Prince Edward Island.....	6
Nova Scotia.....	2
New Brunswick.....	8
Quebec.....	17
Ontario.....	29
Manitoba.....	7
Saskatchewan.....	2
Alberta.....	7
British Columbia.....	6

The total value of production in 1921 was \$153,136,289 compared with \$240,544,618 in 1920. The article most largely dealt in was fresh beef, of which there was sold 264,356,063 pounds with a selling value of \$35,636,366. These figures show a large decrease compared with the previous year when there was sold 297,297,935 pounds of the value of \$55,239,777. The total capital invested in this industry in 1921 amounted to \$58,459,555, compared with \$84,288,306 in 1920. This large decrease is stated to be due to reductions in materials and products on hand, in trading and operating accounts, and in the value of land, buildings, machinery and tools.

The number of employees of different classes, by sex, and the amount paid in salaries and wages is shown in the following table:

	No. of employees		Salaries and wages
	Male	Female	
Officers, managers, etc.	446	17	\$ 5,034,737
Clerks, salesmen, etc.	1,824	432	
Wage earners, 16 years and over.....	6,712	462	\$ 8,547,262
Wage earners, under 16 years.....	42	9	

A classification of employees according to weekly wage payments within specified groups is given below:

Weekly wage	16 years of age and over		Under 16 years of age		Total employees
	Male	Female	Male	Female	
	No.	No.	No.	No.	No.
Under \$5.....	33	3	.....	.....	36
\$5 but under \$10.....	83	60	14	4	161
\$10 but under \$15.....	324	307	21	5	657
\$15 but under \$20.....	1,435	81	7	.....	1,523
\$20 but under \$25.....	2,613	11	.....	.....	2,624
\$25 but under \$30.....	1,256	.....	.....	.....	1,256
\$30 but under \$35.....	540	.....	.....	.....	540
\$35 but under \$40.....	264	.....	.....	.....	264
\$40 but under \$45.....	92	.....	.....	.....	92
\$45 but under \$50.....	34	.....	.....	.....	34
\$50 and over..	38	.....	.....	.....	38
Total.....	6,712	462	42	9	7,225

The following is a summary of some of the principal statistics of the industry by provinces:

Province	No. of plants	Capital invested	Employees	Salaries and wages	Cost of animals slaughtered and materials used	Value of product
Maritime provinces.....	16	\$ 586,063	174	\$ 124,904	\$ 1,512,232	\$ 1,926,144
Quebec.....	17	7,595,428	1,609	2,127,098	15,856,361	20,255,231
Ontario.....	29	34,421,821	5,409	7,549,156	70,723,098	94,732,180
Manitoba.....	7	4,179,919	1,074	1,374,461	9,457,891	14,719,684
Saskatchewan.....	27	.....	.....	.....	.....	.....
Alberta.....	77	9,420,526	1,315	1,848,828	9,617,843	13,540,678
British Columbia.....	6	2,255,798	347	523,331	6,242,410	7,962,372
Total.....	34	58,459,555	9,928	13,547,778	113,389,835	153,136,289

With regard to the length of time these establishments were in occupation, 70 worked for 240 days and over,

7 for from 180 to 239 days, one from 120 to 179 days, and six less than 120 days.

#### The Automobile Industry in Canada during 1921.

A report of the Dominion Bureau of Statistics on the Automobile Industry in Canada in 1921 states that there were 14 plants manufacturing automobiles and 64 producing bodies and parts

as compared with 17 manufacturing cars and 62 producing accessories in 1920. The number of motor cars manufactured in Canada during 1921 was 66,246, which was 30 per cent less than

the production in 1920, and 23 per cent less than the average production of the four-year period, 1916 to 1921. There was a decline also in the output of motor trucks, the decrease amounting to 49 per cent of the output of 1920, and 33 per cent as compared with 1919.

The following tables give some of the principal statistics of the automobile industry by provinces during 1921:

Items	Automobile plants		
	Canada	Ontario	Quebec
No. of plants.....	14	12	2
Capital.....\$	40,080,269		
Employees on salaries—			
Males.....No.	759	748	111
Females.....No.	267	265	2
Salaries paid.....\$	1,402,536	1,373,675	28,861
Employees on wages, average No.—

The average working time of the automobile manufacturing plants was 9 hours per day and 49 hours per week, and they were in operation for 281 days as compared with 278 days in 1920. In the plants manufacturing accessories the average working time was

9 hours per day and 48 per week, and the days in operation averaged 272, as compared with 278 days in 1920.

In the following table the employees are classified in specified groups of weekly wage earners according to sex.

#### The Pulp and Paper Industry in 1921.

The preliminary report issued by the Dominion Bureau of Statistics on the pulp and paper industry in Canada during 1921 shows that there were 100 mills of all classes in operation in that

year, including 40 pulp mills, 27 combined pulp and paper mills and 33 paper mills, being the same number as in 1920. The following table shows their distribution by provinces:

Province	Pulp Mills	Pulp and Paper Mills	Paper Mills	All classes of mills
British Columbia.....	4	2	.....	6
Ontario.....	8	13	18	39
Quebec.....	17	12	15	44
New Brunswick.....	5	.....	.....	5
Nova Scotia.....	6	.....	.....	6
Totals.....	40	27	33	100

These mills had a production of 1,549,082 tons of wood pulp, of which 870,543 tons were for their own use, 97,339 for sale in Canada, and 581,200 for export. The quantity of paper produced was 841,114 tons of newsprint, 53,530 tons of book and writing paper, 55,898 tons of wrapping paper, 89,114 tons of boards and 18,285 tons of other paper and paper products. The total

value of the paper production was \$108,676,952 as compared with a value of \$136,639,931 in 1920. The total capital invested in this industry was \$379,812,751, of which the sum of \$133,554,147 was invested in pulp mills, \$223,636,392 in combined pulp and paper mills, and \$22,622,212 in paper mills.

The investments by provinces were as follows:

British Columbia.....	\$ 39,152,821
Ontario.....	139,666,276
Quebec.....	171,477,753
New Brunswick.....	23,394,271
Nova Scotia.....	6,121,630

The following table shows the number of employees of various classes in the different provinces with their aggregate salaries and wages:

	Officers superintendents, etc		Technical experts, etc.		Clerks, typists, etc.		Employees on wages	
	No.	Salaries	No.	Salaries	No.	Salaries	No.	Salaries

## ANNUAL REPORT OF THE ONTARIO DEPARTMENT OF LABOUR.

THE Ontario Department of Labour recently issued its second annual report containing an account of the work accomplished in 1921. This includes a report of Labour Legislation in Ontario and reports of the administration of The Stationary and Hoisting Engineers' Act, The Factory, Shop and Office Building Act, The Employment Agencies' Act, The Steam Boiler Act, and the Ontario Government offices of the Employment Service of Canada. The report also contains a record of industrial accidents and sections dealing with safety suggestions and statistics respecting the forty leading industries in the province. These statistics were printed in the February, 1922, issue of the LABOUR GAZETTE).

### EMPLOYMENT AND WAGES.

During 1921, there was no improvement in the employment situation as compared with the 1920 period, in fact trade union reports gave the average unemployed membership during 1920 as 3.55 per cent and for 1921 as 9.43 per cent. There were 175,925 registrations for work at the Employment Bureaus in 1920 and 185,946 in 1921, while 172,767 positions were offered by employers in 1920 as compared with 136,858 in 1921. The industrial depression, it is stated, had a considerable effect on the basic industries of the province, and the development of home and export trade was hampered by the money market.

An appreciable decline was shown in wages during the year; in the building trade there was a decline of 10 per cent, wages for bushmen fell 50 per cent and practically went back to the 1913 level, in the manufacturing industries there were declines as high as 25 per cent, the greatest reductions being in the metal trades and iron and steel works, and declines of from 5 to 15 per cent took place in the textile groups and in pulp and paper mills. In the printing trades, however, there were some increases in wages shown. Wages for farm workers in the summer ranged from \$25 to \$45 as compared with from \$40 to \$60 in 1920. In the Men's Farm Section of the Employment Service at Toronto there were 6,786 applications and 5,695 placements. An analysis of 2,110 orders for farm placement work showed that 192 were for married couples and 1,918 for single men. Fifty-three of the requests for married couples were on a yearly basis at wages ranging from \$400 to \$700 per year, \$600 being the most frequent offer. The report states that "the employing farmer has found that this type of labour makes for continuity of help through the busy seasons and it is on the whole more satisfactory, particularly where a separate house can be provided." Very few offers were made for single men on a yearly basis. Three new sections were added at the Toronto offices; a Men's Handicap Section began operations in April, a Professional and Business Section was organized on May 1, and a Boys' Section for boys between 14 and 18 years was started on September 10. It is stated that there were 500 registrations in the Handicap Section and 86 were referred to positions. Situations for these men were hard to obtain; 60 per cent are unskilled labourers and the Section has not facilities for a detailed study of each case which would be the necessary preliminary to any system of retraining. The Civil Service Section was discontinued owing to the Dominion Civil Service Commission taking over this work. During its time in operation there were 719 applications

and 190 placements in various federal departments in Toronto. In the Women's Houseworkers' Section there were 2,938 permanent placements as compared with 1,997 in the previous year. Casual placements were 11,843. The report stated that the demand for cook-generals could not be met and that the need for a training school for this class of worker is very great, the employers refusing to take factory workers into their homes to train them as house-workers.

#### INDUSTRIAL DISPUTES.

Fifty-three industrial disputes took place during 1921 and of these only eleven were due to causes other than disagreement regarding wages. A table showing the industrial disputes in Ontario for the years 1916 to 1921 is given as follows:

Year	Number of disputes	Number of employees involved	Time lost in working days
1916.....	33	4,619	62,686
1917.....	54	9,707	65,148
1918.....	71	11,867	134,234
1919.....	116	43,288	1,021,655
1920.....	102	12,256	228,992
1921.....	53	10,800	521,210

#### UNEMPLOYMENT RELIEF.

Between January 15 and April 12, 1921, some 10,346 cases from 15 municipalities came under the Dominion Government's plan for relief for unemployment, of which 4,830 were in Toronto. An analysis of 5,229 cases where complete data could be secured shows relief cases more numerous among the British born, 48.8 per cent being in this group which constitutes about 14 per cent of the population; 35.3 per cent were Canadian born; and about 15 per cent were from non-English speaking countries of which 12 per cent were from Continental Europe, the majority of these being recent immigrants. The fact that so many British born required relief is stated to be partially due to their having purchased homes, and lack of employment had brought them to the limit of their resources. About 50 per

cent of the relief cases were unskilled labourers and 25 per cent were formerly employed in manufacturing. Very few cases received assistance over long periods, 50 per cent being for less than two weeks and 37 per cent were aided only once.

#### PRIVATE EMPLOYMENT AGENCIES.

In 1914 there were 98 of these agencies operating in Ontario, while in 1921 there were but 16, of which 4 were nurses' registries filling a need not met by the Employment Service.

#### HOISTING AND ENGINEERS' ACT.

Under the Hoisting and Engineers' Act, 10,795 certificates were granted during the fiscal year ended October 31, 1921, to stationary engineers; 1,002 qualified for examination in the 4th class, 180 in the 3rd, 79 in the 2nd, 23 in the first, 17 by provisional certificates, and the balance by renewal fee. The number of hoisting engineers' certificates for the same period was 2,086.

#### INSPECTION OF FACTORIES, SHOPS AND OFFICE BUILDINGS.

Inspection was carried out by a staff of sixteen inspectors, of whom four were women. Inspections during the year numbered 14,349, of which number 5,636 were second inspections. The total number of employees in the industries inspected was 238,472. Of these 31 were children under 14 years, 4,775 were females between 14 and 18 years, 69,740 females over 18, 1,651 males between 14 and 16 years, and 162,275 males over 16. Four prosecutions were instituted for violation of the Factory Act. There were 117 complaints received during 1921 and 63 were sustained. The subjects of complaint were: heat, 22; elevator, 9; fire protection, 5; child labour, 8; hours of labour, 9; sanitation, 2; exhaust system, 9; boilers, 14; toilet accommodation, 19; safety, 9; miscellaneous, 11. The accidents reported during 1921 numbered 4,013 of which

46 were fatal, as compared with 5,185 in 1920 with 55 fatal. Eleven of the fatalities were due to machinery and its connections, 6 to elevators, 5 to cranes and derricks, 4 to burns and scalds, 4 to cars and engines, 3 to falls, 2 each to suffocation, drowning, electricity and natural causes, and one to gas fumes.

In the section dealing with safety suggestions, it is pointed out that there was still need for a good deal of safety work particularly in the smaller manufacturing plants where only a few men are employed.

#### STEAM BOILERS' ACT.

The report states that although there had been during the year a number of explosions of boilers, air tanks and hydro-pneumatic tanks only two were reported to the Department, due to the Act not insisting that such accidents be reported. Numerous complaints were received from Canadian manufacturers and dealers in steam boilers and other pressure vessels that a number of pressure vessels were being shipped into Ontario for which drawings were not submitted for approval and given a registration number. Inspections were made where necessary and the allowable working pressure fixed and the certificate issued. In a number of cases the vessels were found not constructed sufficiently strong to withstand the pressure for which they were sold, and the reduced pressure fixed by the inspector was not sufficient for the purpose desired. This had created a hardship on the purchaser, who in a number of cases was not aware of the requirements of the Steam Boiler Act. It was pointed out that to avoid trouble of this kind in future an arrangement should be made with the Dominion authorities at the point of entry to notify the Boiler Inspection Branch of the Department when shipments of pressure vessels were made and to whom consigned.

## EMPLOYMENT SERVICE COUNCIL OF ONTARIO AND SEASONAL EMPLOYMENT.

**T**HE Employment Service Council of Ontario which was constituted last August by the Ontario Government to act as an advisory council to the Minister of Labour, with reference to the general policy of the Employment Service in Ontario, has made public its views on seasonal unemployment, relief work and the purchase of supplies by public bodies, which were adopted at its monthly meeting on January 11. The memorandum embodying its views was in part as follows:

(1) *Seasonal Unemployment.*—In the highly variable climate of Canada most occupations are to some extent affected by the seasons, the most conspicuous example is, however, to be found in the building trades. The Employment Service Council finds that building operations in this Province are mainly conducted at very high pressure during about eight months of the year and that there is a slack season of about four months during two of which very little building is done.

This makes for the convenience neither of employers nor of workers in the building industry.

From the standpoint of employers a great deal of the work—an unnecessarily large amount—is rush work which involves bidding for workers against other employers at a time when there are no further supplies of labour available. The two necessary consequences are, firstly, that much overtime is done at an unnecessary labour cost to the employer and secondly that a certain amount of the work is done by workers who cannot be considered fully competent.

From the standpoint of the workers this situation means that it is necessary to earn enough by work at very high

pressure during a limited part of the year to tide over the slack season in case the worker is unable to find alternative employment during the slack season.

From either point of view, therefore, anything which can be done to increase the length of the building season will be wholly beneficial to the employer in increasing efficiency and reducing labour cost, and to the worker, in providing steadiness of employment and income in the place of uncertainty.

With a view to making recommendations on this question a sub-committee of the Council has conducted an enquiry among contractors and other interested bodies in Ontario and has received replies from about 60 leading contractors, and has consulted personally with a number of them. The replies to the questionnaire are generally unanimous and may be summarized as follows:

(1) Building in the coldest part of the winter is on the whole somewhat dearer than in other seasons of the year.

(2) Underground work, such as the laying of sewers, can be carried on as cheaply in winter as in any other time, owing to the economy in cost of shoring up which is made possible by the frost.

From this it appears that some building operations can be carried on continuously throughout the year without unnecessary expense, but that during the months of January and February building is likely to prove uneconomical in most cases. Nevertheless the Council believes that except for the period during which the Province is actually snow-bound it is not only possible but very desirable to carry on building operations without interruption.

The fact that the building season is unnecessarily short at present the Council attributes mainly to the "custom of

the trade" which is based partly on the failure of the public to realize how much the building season can be lengthened. The "custom of the trade" leads to the placing of a large number of orders with a view to simultaneous completion at the beginning of October, and results in a great congestion of orders in the Spring. If the public could be convinced, as it might if it were acquainted with the recent experience of many large contractors, that there would be a balance of gain in the placing of orders in the later months of the year instead of almost wholly during the first weeks of Spring, much could be done to lengthen the building season and so lessen the social cost of unemployment.

The most helpful step towards the lengthening of the building season would be the development of a habit among school boards and other public bodies of placing their orders some months earlier, than is now the custom, with this object in view.

The Council accordingly believes:—

1. That, although building in the coldest months would cost somewhat more than in warm weather, the larger construction work such as schools, banks, factories, municipal and provincial buildings coming under this increase—growing experience in the handling of work in the winter months, will make possible economies offsetting this increase.
2. That, since it has been found feasible to have building construction carried on during the late fall and winter months with every degree of safety as to construction; municipalities, departments of the provincial government and boards of education particularly should be asked to arrange their finances so as to start such work in the fall instead of the late spring so as to get well under way before the cold weather sets in.

3. That municipalities and other similarly constituted bodies should be urged to commence their sewer and other underground work in the fall of the year, instead of the spring, as the costs will not be increased thereby; and that publicity be given to the above recommendations with a view to getting prompt action.

(2) *Relief Work*.—The Council believes that the provision of relief for the unemployed on the dole system is demoralizing. It tends to lessen the prestige of the Employment Offices and to diminish their sphere of usefulness by creating an impression that their primary function is to fit in with a dole system, as well as to demoralize the worker whose own interest demands that he should have an opportunity of earning the means of providing for his needs and not be humiliated by resorting to a mechanical system of relief for which his main qualification is lack of earnings.

Evidence is accumulating that there is a good deal less unemployment in the present winter than there has been in either of the last two winters. On the other hand some of those who are unemployed have had relatively few opportunities of saving against this contingency partly owing to the reduction of wages during the last two years and partly owing to the irregularity of their earnings, during the same period. The result is that they are likely to face considerable hardship and may be compelled to depend on public assistance once more.

Under the circumstances the Employment Service Council believes that the need of unemployed workers should be met by the provision of work instead of by the provision of a dole without work.

(3) *Purchase of Supplies by Public Bodies with a view to economy in Expenditure and the Prevention of Unemployment*.—If the Government or other public bodies place orders for supplies at the height of a trade boom when labour and capital are already in full

employment, the influence of these orders serves only to raise the price of the supplies still higher and so to increase the shock which is felt when the bubble bursts and a trade depression inevitably follows. On the other hand if these supplies could be ordered during the advanced stages of a trade depression rather than during times of brisk trade they would serve to lessen the unemployment inevitable at such a time. In so far as such purchases could be made during the advanced stages of a trade depression by allocating them so far as possible to districts where unemployment is most acute, the best possible use might be made of such expenditure and work of a purely commercial character might be made to take the place of the relief work which would otherwise be necessary and which is almost always inefficient. Road-building reforestation and the clearing and development of

agricultural lands might be used at the same time for a similar purpose.

The Council further recommends that in order to minimise the distress resulting from future trade depressions, steps be taken by the Provincial Government to consider the purchase of supplies by the Government Departments with a view to withholding the demand for such supplies as do not require to be purchased at a particular moment, and the ordering of them during the months in which the most severe unemployment is to be found. Since the culmination of a trade boom is the time at which both the prices of goods and the rate of interest are at their highest, we believe that such a course would prove economical from the standpoint of the purchasing department, besides increasing the volume of employment in the later stages of the depression, and diminishing the need for the provision of relief.

### WORK OF THE MANITOBA JOINT COUNCIL OF INDUSTRY.

THE Manitoba Joint Council of Industry has issued a report on its activities during the first two and a half years of its existence, from May 1920 to November, 1922. The Board which was appointed by the provincial government under the Industrial Conditions Act, is composed of Dr. Charles W. Gordon, chairman, and Messrs. H. B. Lyall and W. S. Fulton, nominees of the Employers' Association of Manitoba, and Ernest Robinson and W. B. Simpson, nominees of the Trades and Labour Council, with Messrs. W. S. Cameron and George E. Wright substitute members, nominees of the Employers' Association and of the Trades and Labour Council respectively. During the period under review the Council dealt with 91 cases of industrial disputes, of which 14 were referred to the Council by employers, 61 by employees, and 3 by mutual agreement of both parties. Action in the remaining 13 cases was initiated by the Council.

The disposal of the cases was as follows:

	No. of Cases
Beyond Council's jurisdiction.....	1
Settled on basis of Council's findings	45
Settled by negotiation between parties after conference with Council.....	27
Settled in conference with chairman without reference to Council.....	14
Findings of Council rejected and strike or lockout declared.....	2
Pending.....	2
Total.....	91

The dispute which was adjudged beyond the Council's jurisdiction was a strike of printers at Winnipeg, which the Council held to have been international in scope. In one of the two cases in which the findings of the Council were rejected, the employers forced the employees to accept a lower rate of wages than that recommended by the Council; in the other case the workers' union succeeded in enforcing a higher rate of wages than had been recom-

mended. In 11 disputes both parties agreed beforehand to abide by the decision of the Council. In several cases where a cessation of work had taken place before the dispute had come to the attention of the Council, work was resumed with slight loss of time, on the understanding that the Council's findings would be accepted by both parties. In several industrial agreements a clause has been inserted providing that in case of a dispute arising during the term of the agreement or of failure to effect a new agreement, no strike or lockout shall take place until after the Council of Industry has issued a finding on the matter in dispute.

In addition to its work with regard to industrial disputes, the Council of Industry conducted an investigation of the subject of house rents in Winnipeg, a house famine with an increase in rents

having given rise to the suspicion of profiteering on the part of rental agencies, with consequent unrest throughout the community. The results of the inquiry showed: (1) There was a very grave house famine in the city with the consequent menace both physical and moral to the citizens. (2) The cause of the sudden rise in rents was shown to be due to (a) the abnormally low rental charges during the war; (b) the lack of building operations during the war with consequent house famine following the normal demand at the conclusion of the war. (3) The investigation showed there was no profiteering in rents in Winnipeg, the average rate of revenue on investments being 7.9 per cent. (4) The inquiry awakened public sentiment in Winnipeg to the necessity of house building operations, and encouraged the continuance and extension of the operations of the Civic Housing Commission.

## CONDITIONS IN THE BITUMINOUS COAL MINING INDUSTRY IN THE UNITED STATES.

Preliminary report of United States Coal Commission.

IT will be remembered that last September a law was passed by the United States Congress establishing a Commission "for the purpose of securing information in connection with questions relative to interstate commerce in coal and for other purposes." The Commission was instructed to make its first report on the bituminous coal industry not later than January 15, and to make a separate report on the anthracite industry on or before July 1, 1923. The preliminary report of the Commission which was transmitted in accordance with these instructions deals principally with two subjects: (1) the general conditions prevailing in the industry, and (2) steps taken to promote the reaching of a new agreement between the bituminous coal operators and the United Mine Workers of America to replace the current

agreement which expires on April 1. The report of the Commission is in part as follows:

*The Public and Coal.*—The coal problem begins with a contradiction. Rich beyond all other nations in its wealth of coal resources, the United States experiences coal shortages and high prices. The coal deposits of the country are abundant and well distributed.... Yet, with resources of coal in the ground adequate for the needs of perhaps a hundred generations of Americans, the nation's coal bin is too often depleted and too often the prices paid for coal are much higher than seem warranted by the wealth of coal available.

There have been during the last six years three periods when shortage in the supply of coal has given rise to acute national concern. These recurring periods of scarcity have increased the cost of this basic commodity—increases especially serious to domestic consumers, railroads and public utilities....

*The Coal Industry.*—The coal-mining industry, in point of numbers employed, outranks any single manufacturing industry and stands

next to transportation and agriculture. Approximately three quarters of a million men are employed in this industry, of whom 90 per cent work underground.

The capital invested, according to the rough figures of the census, is \$2,330,000,000, of which \$430,000,000 is invested in the anthracite region and the remainder in the bituminous fields. There are only 174 producers of anthracite and 8 of these control over 70 per cent of the annual output, while there are at least 6,000 commercial producers of soft coal, to say nothing of thousands of wagon mines and country coal banks. These producers operate 9,000 commercial mines.

While the anthracite and bituminous branches of the coal industry are to some degree competitive in their markets, the differences in their mining, labour and economic problems are so marked that the discussion in this report will be limited to bituminous coal except where anthracite is specifically mentioned; the law requires a "separate report on the anthracite industry on or before July 1, 1923."

Each coal district, if not each mine, has its own local customs and problems, determined by the quality of coal, thickness of seam, attitude of the bed, conditions of mining, the markets which it can reach, its freight rates, its labour policy and other factors. In the matter of wage scales, even in the union districts where wage scales are determined by joint agreement, we find variations from district to district and from mine to mine. Still more difficult to summarize are the wage rates in non-union mines. Not only are these wage rates complicated, but the opportunity to labour varies so greatly from field to field or mine to mine, depending on character of coal, nearness to the market, and commercial connections, that it is hazardous to make any generalization concerning miners' earnings.

No less difficult under such conditions is the determination of average cost or profit. These subjects require specific and very detailed painstaking investigation, which is complicated by the varying prices charged and received for the coal, quantity and quality both entering into the subject. The bituminous output is consumed approximately in the following percentages: Railroads, 28; industrials, 25; coking, 15; domestic, 10; iron and steel, 7; public utilities, 7; export, 4; mines, 2; bunkers, 2.

The coal industry does not end at the mine. Some 180 railroads take the coal at the mine mouth and transport it to thousands of destinations. Because the railroads are the largest customers of the bituminous industry, and because coal—anthracite and bituminous—constitutes one-third of the railroad's freight, the problems of the two are closely

interwoven and their interests interdependent.... No solution of the coal problem can be found that does not recognize this community of interest between coal and transportation....

Combined charges of the railroad, the wholesaler, and the retailer in most localities exceed the price of the coal at the mines. Therefore it is readily seen that the problem whether the transportation and marketing charges are just and fair is of the utmost concern to the consumers of coal.

*Deficiencies in Service.*—The widespread public dissatisfaction with the service rendered by the coal industry is not confined to matters of shortage and price, for a train of unfortunate consequences has followed those recurring periods of scarcity: deterioration in the quality of fuel delivered; congestion of railway traffic, necessitating the neglect of other freight to give preference to coal, to the serious harm of other business and; breakdown of mutual confidence of producers and consumers of coal as expressed in the customary contractual relations.

How many there are we do not yet know, but there are certain mines which contract a part of their potential output, reserving the balance for spot coal. These operators guard themselves against car shortage by clauses which compel them to fill their contracts only in proportion to the relative car supply. So in recent years, when speculators with contracts could get only a partial supply of cars, say 60 per cent, they would use only that percentage of available cars for deliveries upon their contracts, while the other cars would be used for spot coal; that is, they prorate their contracts with the sole purpose of having free coal for a higher spot market.

The record of production and distribution of coal in recent years may be summed up in the word 'instability,' and this instability in the supply of one of the most fundamental of all raw materials has been an important cause in unsettling business and in delaying the return of normal times.

(1) *Large Profits.*—It has been suggested to us that one of the causes of high prices of coal is profiteering. There has been profiteering in the sense that grossly exorbitant profits have been taken at times by many operators, brokers, and retailers; profits that have been disproportionate to the cost of the coal or the service rendered or the risk incurred. But this commission has not yet obtained the figures for the past ten-year period specifically required by the act in order to settle this question. A thorough examination of the profits of production and distribution, including the revenue derived from associated enterprises, is already under way.

(2) *Labour Difficulties.* — Others attribute the instability in the coal industry primarily to labour troubles. There can be no doubt that two of the three periods of high prices since 1916 have been caused largely by labour troubles....

(3) *Car Shortage.*—An opinion commonly expressed before the Commission is that the primary cause of scarcity and high prices of coal is transportation deficiency. There have been recurring periods of 'car shortage,' and such periods have generally been accompanied by high prices of coal. There are many other causes for the inadequacy of transportation beside the absence of cars, such as lack of motive power, congestion of yards, terminal facilities, or gateways, single tracks where double tracks are needed, inability to co-ordinate movement of boats and cars at ports, strikes of railway labour, and severe winter storms temporarily blockading traffic. Any one of these elements may be responsible for what to the operator at a mine seems a simple "shortage of cars."....

(4) *Over-development.* — Already in our study we have come to see that underlying these immediate causes of scarcity and high prices—labour difficulties and transportation deficiency—are other causes; namely, the irregularity of demand and the over-development of the mining industry. These basic factors apply directly only to bituminous coal but indirectly they affect anthracite as well, for anthracite is in competition with bituminous coal and the wage scale in the one industry is influenced by changes in the other.

We find that in the bituminous industry since 1890 the mines have averaged, over the country as a whole, only 213 days out of a possible working year of 308 days.... Over a long period comparatively little of the time lost has been on account of strikes and that in the years when there are no strikes the aggregate time lost from all causes is about as great as in those when strikes occur. In the twenty-three years over which the statistical record of strikes extends, the time lost because of strikes has averaged 9 days a year, or less than 10 per cent of the time lost for all causes combined....

Short working time is the result of over-development in the industry. There are more mines and more miners than the needs of the country require.

A cause of part-time operations of the bituminous mines is the variation in demand for the product, in part annual and in part seasonal. In so far as the irregularity in demand is seasonal, greater in cold weather than in summer, the lost time in summer is unavoidable unless some means can be devised to encourage the storage of coal during the dull months....

Moreover, our preliminary studies show that even in times of maximum demand the mines as a whole do not work full time. In other words, the mine capacity is in excess even of maximum requirements. Although the country has never been able to absorb in a year more than 579,000,000 tons of bituminous coal, the present capacity of the mines is well above 800,000,000 tons.

The steady increase in the army of bituminous coal miners during the last four years, notwithstanding a lessened demand for their product is also a fact that stands out in the statistical records furnished the commission by the U. S. Geological Survey. In 1918, the year of maximum coal output, when 579,000,000 tons were mined, 615,000 men were employed in the bituminous coal mines, nearly 622,000 the next year, over 639,000 in 1920, and in 1921 663,000 mine workers were employed in producing about 416,000,000 tons. To get a year comparable in soft coal output with 1921 we have to go back to 1910, when 417,000,000 tons were mined, and it is significant that in that year less than 556,000 mine workers were employed—or about a million more tons of coal with 100,000 fewer miners....

This condition of over-development in mines and of surplus number of miners is an underlying cause of the instability of the industry. It means unemployment and intermittent employment to the coal miner and a direct loss to him of earning power. It explains his need and demand for a day wage rate higher than the average for most other industries. It has also adversely affected the profits of the operator and imposed a burden on the consumer.

The seasonal character of coal movement is a serious handicap to the railroads in those districts where it is the rule. If the peak demands of the mines are to be met the carrier must provide equipment for which there is no use in the off-season.

The unequal distribution of work between mines, attributed by many persons to the assigned and private car system, is also being considered by the Interstate Commerce Commission at this time. By this system men in one mine may get perhaps only one day's work a week, and others, even in an adjoining mine, may get six days' work, causing discontent and strengthening the demands for higher rates of pay applicable to all.

As for the public, the cost of maintaining an over-developed industry is reflected in the high price of coal. We do not know accurately the extent of burden, but it may well be measured by the cost of keeping in the industry an excess of perhaps 200,000 miners and their families and the excess investment in mines....

(5) *Coal Storage*.—A preliminary survey indicates that much can be done to overcome irregular demand by encouraging the storage of coal, and the commission cannot stress too strongly the great advantage of coal storage during the spring and summer for fall and winter use. This recommendation should apply to all consumers of coal—the railroads, the public utilities, the industries, and the home—and on the measure in which it may be adopted will largely depend the evenness of distribution and the cost of coal to the public during the season of heavy consumption. In addition, it will contribute to more continuous operation of the mines during the summer, distributing employment more evenly throughout the year, thus tending to stabilize the industry....

There can be no satisfactory agreement as to wage rates and no lasting peace between operators and men unless steadier employment can be provided. There can be no satisfactory solution of our transportation problem as long as the railroads are subjected to sudden peak loads of coal traffic at the season when the demands of agriculture and industry are at their height.

The Commission believes that the public interest in coal raises fundamental questions of the relation of this industry to the nation and of the degree to which private right must yield to public welfare. It may be that both private property in an exhaustible resource and labour in a public service industry must admit to certain modifications of their private rights, receiving in return certain guarantees and privileges not accorded to purely private business or persons in private employ.

With reference to the steps taken by the Commission to promote the reaching of an agreement in the negotiations that were pending between the bituminous coal operators and the United Mine Workers, the Commission states that the responsibility of settling their disputes rests primarily upon the industry, that it was vested with no functions of mediation or arbitration, and that only when it had reliable information that the efforts of the parties in controversy were on the verge of failure did it feel constrained to offer its suggestions. With knowledge that a suspension was threatened on April 1, in the unionized bituminous coal fields, it addressed two telegrams early in January to the joint meeting of operators and union miners which was then being held at Chicago. In these telegrams the Commission urged

both parties in the public interest to reach a speedy agreement, or, if all efforts to do so failed, to continue the present arrangement until April 1, 1924, by which time the Commission expected to have found and reported fully all the facts over which their disagreements had arisen, and Congress would have had opportunity to take such action in the premises as it might deem wise.

In reply, the operators stated that the joint conference made earnest, serious and sincere effort to reach an agreement, but that the cumbersomeness of a nationwide conference of coal operators and coal miners, representing fifteen producing districts made success impossible. As to a renewal of the present arrangement with the miners, this conference had no power to take such action, but the arrangement of conferences to consider this matter was being given consideration.

A similar reply was made by the United Mine Workers, who stated that it was reasonably certain that a wage scale conference would convene before the end of the month. A few days later the Commission was further advised by the union that the representatives of the miners and operators of the Central Competitive Field would meet in joint conference in New York in January 18, for the purpose of negotiating an agreement for wages and working conditions in the bituminous industry of that area.

**Wage contract renewed in Central Competitive Field.**

The conference of bituminous coal operators and the United Mine Workers which met in New York on January 18, included representatives of operators from Illinois, Indiana and Eastern Ohio, being the territory that was known as the Central Competitive Field with the district of Pittsburg left out. At this conference an agreement was reached by a subcommittee of the conference to renew the existing wage contract for one year from April 1, 1923, and a resolution to this effect was carried by the joint conference.

## WORKS MAGAZINES AND WELFARE DEPARTMENTS.

---

**I**N recent years there has been a considerable increase in the number of works or employees' magazines in Canada. In a bulletin issued by the Department of Labour in October, 1921, (Employees' Magazines in Canada, Bulletin No. 4—Industrial Relations Series) an account is given of some forty of these publications. In a recent issue of "The Blue Pencil", a monthly magazine devoted to house organs and employees' publications published at Book Hill, Highland Falls, N. Y., an article appeared on "Works Magazines and Welfare Departments" by A. G. Marshall, M.A., an official of the firm of Messrs. Firth Ltd., a large employer of labour in Great Britain. This article was reprinted from "Welfare Work", an English publication. A summary of it is given below.

The number of Works Magazines has enormously increased during the last two years, in fact many firms consider their welfare department incomplete without a house organ co-ordinating its activities. They have developed on widely different lines, but each tends to show the spirit of the welfare work carried on in its particular factory. The most successful are those which have really endeavoured to be the production of the employees themselves, recording their various activities and affording them opportunity of expression for their thoughts, and being generally documents pulsating with energy, vitality and broadminded common sense. A works' magazine properly run is a splendid medium for co-ordinating all the welfare activities in the firm, and is certainly one means of creating that hearty co-operative spirit in industry which is so essential for the future well-being of our country.

Some firms use their magazine as a medium for advertising, and so tend to spoil its popularity with the people whom it ought to serve—the people engaged in the works. The magazine which serves best as an advertising medium outside, is the one which is most popular with the employees inside, and which helps to unite the directors, staff and manual workers into one body.

Again, if a works' magazine is well-edited and popular with the workpeople, the firm can make it the medium for publishing notices and other information to their employees, and so obviate, in a widely scattered works, the need for posters at the various gates. And also when directors are desirous of breaking new ground in connection with the welfare of their employees, the pages of the magazine will be found to be the most useful place to carry this out. In order to keep interest alive in saving schemes, educational classes, musical societies, orchestras, etc., continual references to these activities in the pages of the magazine will effect much. Biographical notes and photographs of old employees with long records of service with the firm, accounts of the various educational and recreational schemes, etc., all tend to continue a fine tradition or to develop one where it does not exist.

Every endeavour should be made to see that the magazine pays for itself, but any money a firm spends on subsidizing such a venture will be money well spent, for there is no doubt that if the magazine is made the intensely human document it ought to be, it will have the effect of helping to bring about a spirit of camaraderie in industry.

When first publishing a works' magazine it is very important to have a proper organization to get as many people interested as possible, and to see that they are representative of the works. In a great many firms the welfare supervisor acts as editor. He is in touch with all the activities and all the movements for improving the conditions of the workers, and he often has the necessary training for work of this kind.

The editor should not rush to the extreme of producing nothing but technical articles, nor on the other hand allow the magazine to develop into a mere record of events. Though it is essential that one should allow grievances to be ventilated through the works journal, it is important to avoid acrimonious discussions between capital and labour.

The works' magazine is an important link in the chain which society is striving to forge to bind employer and employees more closely together. It must therefore be optimistic and human, but never argumentative and bitter.

The editor should endeavour as far as possible to get other people to write articles and himself to act as the rallying point, the collecting and assimilating agency for all matter for the journal. It is therefore important, that the editor should have several sub-editors to assist him.

At the present time the charge for making blocks for photographs and the

price for art paper is so high that it needs careful consideration before embarking on producing photographs in a magazine. These, however, are such an important feature and help so materially in attaining success, that if at all possible, photographs should be included. It is also important that the cover should be attractive, as usually the first impressions of a journal are obtained from the outside cover.

The publishing of the history of a firm or an account of the growth of various departments are very interesting items that can be included in a works' magazine, as they create a corporate spirit in the works. People like to read about the activities of the firm in days gone by, and to see pictures of the workpeople of these days. If the firm is an old established one this is especially important. As a magazine should also endeavour to be an educational medium it is important that there should be short popular articles both of technical and general interest. Many of the workers find it more easy to express themselves in verse than in prose; it adds interest to a journal therefore if you can produce a few poems. Accounts of the doings of Sports Clubs, Musical Societies, etc., are always of very great interest. A short resume of the proceedings of the various committees can also be published in a magazine. Competitions of various kinds are also helpful in sustaining interest and distinct hits are sometimes made in clever cartoons.

THE EMPLOYMENT SITUATION DURING DECEMBER, 1922, AS REPORTED BY EMPLOYERS.

STATEMENTS compiled by the Dominion Bureau of Statistics show that employment at the end of December suffered the usual heavy decline peculiar to the season. The actual shrinkage involved the release of a somewhat greater number of workers than that recorded during the corresponding period of the preceding year, but the percentage decline was not quite so large. The curve of employment in the accompanying chart, which gained steadily from the end of April until the close of November, was considerably depressed at the close of the month under review, although it did not reach as low a level as in the corresponding month of the preceding year, when the index number fell to a point over 8 points lower. It is expected that early in January considerable revival will be indicated and that the curve will before long resume its upward movement.

Reports were tabulated from 6,221 employers with an aggregate pay roll of 733,067 persons, of whom 707,703 were actually working on December 30 as compared with 779,758 in the last report. The index number, which is based on the number of persons ac-

tually at work, therefore declined from 95.1 at the end of November to 86.3 for the period under review. At the close of December 1921 the index number had fallen to 77.9. The only increases in activity as compared with the preceding month were registered in logging and retail trade; both gains indicated seasonal activity. Substantial contractions were recorded in all other industries, the losses in the manufacturing group, in construction and transportation being especially heavy. Further declines were registered in mining, while the communication and service groups also showed some dullness.

The tendency in all provinces was distinctly unfavourable. The employers reporting in Quebec and Ontario together released nearly 54,000 persons, or practically 10 per cent of their pay-rolls. The shrinkage in the four western provinces was somewhat less extensive than that indicated in Quebec and Ontario, but nevertheless pronounced. The smallest losses occurred in the Maritime provinces, the re-opening of the winter ports largely counteracting the reductions recorded in manufacturing and construction.

The decreases in all provinces were of a general character. The following table of index numbers for these districts shows that although the contractions were severe, conditions were everywhere more favourable than during the corresponding period of 1921:

District	Relative weight	Dec. 30, 1922	Nov. 30, 1922	Dec. 31, 1921
Maritime Provinces....	9.4	90.8	92.1	78.1
Quebec and Ontario....	68.8	84.8	94.2	76.8
Prairie Provinces.....	13.6	90.0	101.5	82.8
British Columbia.....	8.2	88.3	95.1	77.9
Canada.....	100.	86.3	95.1	77.9

Another analysis of the returns shows that employment in the six cities for which special tabulations are made declined very considerably. The contractions were especially heavy in Montreal, where 17,197 persons were laid off, many of them, however, for only short periods. The 761 concerns making returns reported an aggregate payroll of 90,988 persons as compared with 108,185 employees at the close of November, the difference representing a decline of 15.9 per cent. The closing over the holidays of the locomotive shops accounted for a substantial share of this decrease in Montreal, while the losses in textile, tin, sugar, confectionery and tobacco factories, in construction on the electric railway and in shipping and stevedoring were also pronounced. Reports were compiled from 854 concerns in Toronto, whose payrolls totalled 93,943 persons as compared with 100,760 on November 30. This reduction of 6.8 per cent occurred mainly in garment, biscuit, chocolate, confectionery, lead, tin and box works. The construction industries were not so fully engaged, and employment on the street railways also declined. In Ottawa returns were tabulated from 130 concerns whose payrolls aggregated 11,424 workers, or 451 less than in November. Reductions in staff in sawmills accounted for the greater part of the

reduction, but employment on construction work and on telephones was quiet. An aggregate working force of 24,858 employees was reported by the 211 Hamilton concerns furnishing returns who had employed 26,870 workers at the end of the preceding month; the difference represented a shrinkage of 7.5 per cent. Knitting mills, iron, steel and tobacco factories were slack, while manufacturers of other products also recorded curtailment of operations. In Winnipeg, 1,553 persons were released by the 373 concerns making returns. Their staffs totalled 26,879 workers as compared with 28,432 employees on November 30, a decrease of 5.5 per cent. Biscuit, confectionery, brick and textile factories and building contractors reported the bulk of the losses. In Vancouver, canneries, lumber mills and shipyards registered reduced employment, while activity on the street railways and in building construction was on a lower level. Statements were tabulated from 259 concerns employing 19,522 workers as compared with 20,487 persons at the close of November. The difference represented a contraction of 4.7 per cent. The index numbers of employment in these cities as at December 30 and November 30, 1922 and December 31, 1921 are shown in the following table:

City	Relative weight	Dec. 30, 1922	Nov. 30, 1922	Dec. 31, 1921
Montreal.....	12.9	79.8	94.7	73.2
Toronto.....	18.3	84.7	92.9	85.1
Ottawa.....	1.6	94.4	98.6	.....
Hamilton.....	3.5	81.5	88.2	.....
Winnipeg.....	3.8	92.6	97.8	85.2
Vancouver.....	2.8	87.7	90.7	79.9

#### The Manufacturing Industries.

The volume of employment afforded in the manufacturing industries showed substantial contraction at the close of December, when 47,209 persons were released by the 4,052 manufacturers making returns. Their total payroll

included 384,726 persons as compared with 431,935 employees on November 30. Approximately 45 per cent of this reduction of 10.9 per cent was recorded in the iron and steel industry. Heavy losses were also registered in lumber mills, furniture factories, canneries, biscuit concerns, pulp and paper mills, rubber, hosiery, knitting, thread, yarn, cloth, garment, tobacco, glass, brick, cement, lead, tin, zinc and copper factories. Decreases in employment on a somewhat smaller scale were indicated in boot, shoe, chemical, electric current, electrical apparatus, petroleum, roofing material and button works. While the tendency in the manufacturing division in all provinces was downward, the losses in Quebec and Ontario were especially heavy. In spite of the very pronounced contractions just mentioned, the level of employment at the close of December was higher than at the same period of 1921, when the index number stood some 10 points lower. The movement at that time had also been decidedly unfavourable, but partial recovery was indicated early in January and a similar reaction may be expected in the next report.

**ANIMAL PRODUCTS, EDIBLE.**—The trend of employment in this group continued to be retrogressive, the declines being, in fact, considerably larger than any recorded in recent months. Abattoirs and meatpacking plants registered the greater part of the decrease, but fish preserving establishments also were slacker. The majority of the workers released were let out in Ontario, although reductions in staffs were reported in every province except in the Prairies, where there were minor gains. Statements were received from 167 concerns employing 12,811 persons at the end of December as compared with 13,863 workers on November 30, a decline of 7.6 per cent. This reduction caused the index number of employment to coincide with that reported at the close of December, 1921, when contractions had occurred also.

**LEATHER PRODUCTS.**—The volume of employment afforded in boot and shoe factories and in tanneries declined considerably during December, thus repeating the downward movement indicated during the same month of 1921. The decreases during the period under review were, however, somewhat larger than those shown at that time and employment then was on a slightly higher level. Statements for the period being surveyed were tabulated from 207 manufacturers employing 18,020 persons as compared with 18,675 employees at the end of November, a decline of 3.5 per cent. Ontario firms recorded practically all the loss; slightly increased activity was indicated in Quebec while elsewhere the situation showed little change.

**LUMBER PRODUCTS.**—Activity in saw-mills continued to lessen very noticeably and employment in furniture and containers factories decreased to a marked degree. Ontario firms again reported a very large share of the shrinkage, but the declines in British Columbia, Quebec and the Maritime provinces were also extensive. Returns for the close of December indicated that 700 firms in the group had released 5,682 workers, their payrolls aggregating 38,690 persons as compared with 44,372 in the last report. This reduction of 12.8 per cent was the largest that had been recorded since the period of seasonal slackness began early in August. It was, moreover, somewhat more pronounced than that indicated during the corresponding period of 1921, but nevertheless employment for the period under review was in considerably greater volume.

**PLANT PRODUCTS, EDIBLE.**—The trend in this group continued to be retrogressive. All divisions of the industry shared in the contraction, although canneries, confectionery and biscuit concerns reported the most extensive losses. Over 50 per cent of the total decline was registered in Ontario, but reductions in payroll were recorded everywhere. An aggregate payroll of 23,329 persons was indicated by the

350 firms from which returns were received. At the close of November they had employed 28,408 persons; the decline therefore represented 17.9 per cent of the payroll at that time. The shrinkage reported during the corresponding period of the preceding year had been somewhat less pronounced, but there was very little difference between the index numbers for the two months.

**PULP AND PAPER PRODUCTS.**—Continued contractions were indicated by manufacturers of pulp, paper and paper products and also in printing and publishing establishments. At the close of December the 451 concerns making returns employed 48,175 workers as compared with 49,906 on November 30. The bulk of this 3.5 per cent decrease occurred in Quebec, but the tendency everywhere was unfavourable. Employment during the period under review was approximately 10 points higher than during the same month of 1921 when declines had also been registered although they were on a somewhat smaller scale.

**RUBBER PRODUCTS.**—Very heavy losses were recorded in this industry, 1,676 persons having been released by the 30 concerns reporting. As their staffs included 8,397 persons as compared with 10,073 on November 30, this indicated a decline of 16.6 per cent which was fairly evenly distributed between Quebec and Ontario. Tires and rubber footwear factories were considerably slack, partly owing to temporary shut-downs over the holiday. The shrinkage indicated during the month under review was much more severe than that reported during December, 1921, and caused the index number to be several points lower than at that time.

**TEXTILE PRODUCTS.**—Continued curtailment of staff was noted in hosiery, knitting, garment, thread, yarn, cloth, and headwear factories, chiefly in Ontario but to some extent in all provinces. Statements were compiled from 595 manufacturers in the textile division whose staffs aggregated 66,170

persons as compared with 70,816 workers at the end of the preceding month, the difference representing a reduction in employment of 6.6 per cent. The declines reported during the corresponding period of the preceding year had affected approximately the same number of workers, but the index number at that time was a few points lower than at the close of December 1922.

**TOBACCO, DISTILLED AND MALT LIQUORS.**—The volume of employment afforded in this group showed very large contractions at the end of December. Tobacco factories and breweries shared in the decline, which, as in most other groups herein reviewed, was partly temporary in character. One hundred manufacturers registered a combined working force of 9,412 persons, a reduction of 1,910 workers or 16.9 per cent from their November payrolls. Approximately 78 per cent of the decrease was reported in Quebec, the remainder occurring almost entirely in Ontario. Employment for the period under review was on practically the same level as during December, 1921, when the shrinkage had also been pronounced.

**CHEMICAL AND ALLIED PRODUCTS.**—A moderately favourable tendency has been evidenced in this industry during the greater part of the year, but comparatively heavy contractions reported during December reduced employment to the level indicated early in February, 1922. Returns were received from 115 establishments employing 6,309 workers as compared with 6,631 persons on November 30, a contraction of 4.9 per cent. The greater part of this decrease occurred in drug and medicinal preparation concerns in Ontario. The index number stood several points higher than during December of the previous year, slightly larger losses having been recorded at that time.

**CLAY, GLASS AND STONE PRODUCTS.**—Statements tabulated from 124 manufacturers in this group showed a group payroll of 8,744 persons, as compared

with 9,901 employees at the close of November, a decline of 11.7 per cent. All provinces shared in this contraction, but the reductions in Quebec and Ontario were the most extensive. Glass, brick, cement and lime works registered curtailment of operations. Reductions in payroll had also been recorded during the corresponding period of 1921 and the situation then was less favourable than for the month being surveyed.

**ELECTRIC CURRENT.**—Producers of electric current registered less activity than in November, 214 persons having been let out by the 96 concerns reporting. As their total payroll included 10,723 workers as compared with 10,937 on November 30, this represented a 2 per cent reduction. Moderate declines in all provinces contributed to this shrinkage. The volume of employment continued to be greater than in the corresponding period of 1921.

**IRON AND STEEL PRODUCTS.**—The closing of the railway car shops in many centres together with contractions in practically every division of the iron and steel industry caused a 17.1 per cent decrease in employment in the group. Automobile, heating appliance, iron and steel fabrication, pipe, small hardware and general plant machinery works in particular reported large losses. Especially pronounced shrinkage occurred in Ontario, the Prairie provinces and Quebec, but the tendency everywhere was retrogressive. Reports were compiled from 723 manufacturers in the iron and steel industry, whose payrolls totalled 100,101 persons as compared with 120,752 workers at the close of November, a reduction of 20,651 employees. The curtailment of operations reported during the month under review was considerably less extensive than that registered during December, 1921, when 28,068 workers had been released from the staff of the concerns making returns. The index number of employment for the period being sur-

veyed stood some 15 points higher than at that time.

**NON-FERROUS METAL PRODUCTS.**—The production of lead, tin, zinc and copper articles declined very noticeably at the end of December, and manufacturers of gold, silver and platinum goods also recorded reduced activity. Nearly 80 per cent of the contractions occurred in Ontario, while the remainder was largely recorded in Quebec. A group payroll of 9,347 persons was indicated by the 116 concerns making returns who had employed 10,892 workers on November 30, a reduction of 14.2 per cent. Shrinkage on a much smaller scale had been recorded during December, 1921, but conditions during the period under review were rather more favourable than at that time.

**MINERAL PRODUCTS.**—Employment in this group also was in lesser volume, concerns turning out petroleum products, gas, asbestos goods and baking powders in Quebec and Ontario having reduced their payrolls by 309 workers or 3.5 per cent. The total working force of the 93 concerns making returns stood at 8,466 persons as compared with 8,775 employees at the close of November. The tendency during the corresponding period of last year had been downward also, and the index number stood slightly below that for the month being surveyed.

**MISCELLANEOUS MANUFACTURING INDUSTRIES.**—The production of buttons and of roofing materials, mainly in Quebec and Ontario, declined substantially during December. Reports were compiled from 73 concerns in the miscellaneous group, whose staffs aggregated 3,918 persons, as compared with 4,202 employees on November 30, the difference representing a loss of 6.8 per cent.

#### Logging.

The movement in this industry continued to be upward, although the gains were very much smaller than those reported during the preceding months. They would no doubt have been

considerably more substantial had it not been for the fact that many men leave the bush over the holiday season. Fairly large increases were recorded in Ontario; in Quebec the additions to staff were somewhat smaller, but still noteworthy, while in the Maritime Provinces and British Columbia contractions were indicated, those in the latter district being quite extensive. Statements were compiled from 199 operators employing 32,016 workers as compared with 31,208 men at the close of November, an expansion of 2.6 per cent. The trend of employment in December, 1921, had been unfavourable, and the index number of employment for the month being surveyed stood some 27 points higher than at that time.

#### Mining.

**COAL MINING.**—Activity in the Western coal fields was somewhat curtailed during December, while the situation in the Maritime districts showed practically no change. Employment in the former section of the country, moreover, was considerably affected during the month by the strike existing in Alberta. A total working force of 30,931 persons was reported by the 89 operators making returns, whose staffs had included 31,224 employees on November 30. The difference represented a decline of .9 per cent. The movement during December, 1921, had been decidedly more unfavourable than during the month being surveyed.

**METALLIC ORES.**—Gold, silver, copper and zinc mining in British Columbia and Ontario afforded rather less employment, 197 persons having been released from the working forces of the 46 concerns reporting. Their total payroll comprised 9,738 persons as compared with 9,935 employees on November 30, a decrease of 2 per cent. Conditions during December 1921 had remained practically stationary, but the general situation during the month under review was considerably better.

**NON-METALLIC MINERALS, OTHER THAN COAL.**—Stone quarries in Ontario and

asbestos mines in Quebec were slacker than for several months, partly reflecting seasonal dullness. The 60 employers making returns reported an aggregate payroll of 5,298 workers, as compared with 5,701 employees in their last returns, a shrinkage of 7.1 per cent. The index number in this group stood several points higher than in December, 1921, when contractions had been recorded also.

#### Communication.

Substantial losses were reported in the communication industry during December, owing partly to employees being temporarily released over the holidays. The declines were fairly generally distributed over the country, although they were perhaps heavier in Quebec and Ontario than elsewhere. A group payroll of 20,417 persons was indicated by the 193 concerns making returns who had employed 21,257 workers in their last report. This loss of 840 employees represented a 4 per cent decrease, and caused the index number to be somewhat lower than in December, 1921.

#### Transportation.

**STREET RAILWAYS AND CARTAGE.**—The downward trend indicated recently in the employment afforded in local transportation was continued during December, 1,613 fewer persons being employed by the 118 employers reporting than had been on their payrolls at the end of November. They employed 18,903 workers as compared with 20,516 on the latter date. All provinces shared in the retrogressive movement, but the reductions in staff in Ontario were the largest. Contractions on a somewhat smaller scale had been registered during the corresponding month of 1921, and the index numbers for the two periods were practically the same.

**STEAM RAILWAYS.**—Further heavy curtailment of staff was indicated by the operation departments of the railways, a seasonal movement which repeated that indicated during December, 1921 and 1920. The reopening of the winter ports resulted in increased

activity being reported by the railways in the Maritime provinces, but elsewhere decreases of varying size were recorded, those in the Prairie provinces being the largest. Statements were received from 126 concerns and divisional superintendents whose payrolls aggregated 75,625 workers, as compared with 77,669 at the close of November. The difference represented a decline of 2.6 per cent. The situation continued to be rather more favourable than during the corresponding period of 1921.

**SHIPPING AND STEVEDORING.**—Considerable fluctuations were noted in this group during December; substantial gains in the Maritime district, due to the resumption of activity in the winter harbours, were not clearly sufficient to offset the losses occasioned by the closing of the summer ports in Quebec and Ontario. In British Columbia the tendency was favourable, although the gains were not particularly pronounced. A group payroll of 10,569 persons was reported by the 63 concerns making returns, who had employed 17,538 workers in their last returns, a difference of 6,969 workers or 39.7 per cent. Contractions on a somewhat smaller scale had been registered during December of last year, but the level of employment then was a good deal lower than for the month being surveyed.

#### Construction and Maintenance.

The seasonal declines recorded in this group in the last few reports continued on a rather larger scale during December, when 13,552 persons were released from employment by the 406 concerns and divisional superintendents making returns. Their total payrolls aggregated 48,824 persons as compared with 62,376 on November 30; the decrease therefore was 21.7 per cent. The movement in all provinces was unfavourable, the losses in the Quebec-Ontario district being especially marked. Of the total payroll for the month under review 28,350 workers were employed on railroad construction and maintenance, 15,681 on building con-

struction and 4,793 on highways. The tendency during December, 1921, had also been downward although the losses affected a rather smaller number of workers. Nevertheless, the index number of employment at that time was not so high.

### Services.

**HOTELS AND RESTAURANTS.**—Employment in hotels and restaurants generally declined, although the losses were not particularly pronounced. The 82 concerns reporting showed a group payroll of 6,021 persons, which was 275 less than in their last statement, a contraction of 4.4 per cent. While all provinces participated in the shrinkage the losses in Quebec were the largest. Employment was on practically the same level as in December of the preceding year.

### Trade.

Considerable activity was reported in retail stores on account of holiday buying. Wholesale trade however was dull, but the industry as a whole showed an upward tendency. Statements were tabulated from 676 establishments with a total sales force of 59,068 as compared with 58,492 workers at the close of November, an increase of 1 per cent. The gains in the retail division were fairly generally distributed

over the country, although they were rather more pronounced in Quebec and Ontario than elsewhere, while the losses in wholesale trade were centred largely in those two provinces. Reduced activity, however, was also indicated in the Prairie provinces. The movement experienced during the month being surveyed repeated that indicated during December, 1921, there having been improvement in retail trade with a decline in the wholesale division. The volume of employment for the present period, however, was slightly greater than at that time.

The table on page 165 gives the index numbers of employment as reported by employers in the various industries as at December 30, 1922, at November 30, 1922, and at December 31, 1921. As usual the first column indicates the proportion of workers in each industrial group in relation to the total number of workers in all groups for the month under review. (Number of workers employed on January 17, 1920 equals 100).

---

## EMPLOYMENT DURING THE YEAR 1922, AS REPORTED BY EMPLOYERS.

**A** REVIEW of employment during 1922 as indicated by monthly reports received by the Government from employers of labour shows that a decidedly buoyant tendency was in evidence, in contrast with the comparatively stagnant conditions that prevailed in the preceding year. The upward movement, as would be expected, increased in force during the summer and autumn, until activity reached its maximum for the year at the close of October. From July, 1920, employment declined steadily until May, 1921. Some re-action then occurred, extending to the end of October, but the commencement of winter slackness in November, together with the holiday dullness in December, caused the resumption of the retrogressive movement on an even larger scale,

until, at the close of the latter month, the index number had fallen to 77.9. Early in 1922, improvement was recorded, and from January the trend, with few exceptions, was steadily upward until the beginning of November, when the index number reached 95.8. For the same period of 1921 it had stood at 87.2, while in 1920 it was 101.1. Seasonal losses, supplementing those incidental to the holiday and inventory period in December, caused the index number to decline to 86.3 at the end of the year but it was expected that considerable re-action would be indicated during January.

All provinces shared in the recovery shown during 1922, but since the depression had been most evident in the Quebec-Ontario district, the improve-

ment was perhaps more pronounced there than elsewhere. Those two provinces together contribute approximately 68 per cent of the total payrolls reported and consequently influenced very largely the index number for the country as a whole. Employment in the manufacturing division gained steadily, activity in the iron, and steel, textile and lumber divisions being in considerably greater volume during the past year than in 1921. The extension of operations in the metallic ore mines in Ontario and in asbestos mines in Quebec, which caused large additions to payrolls, made the index numbers in those industries substantially higher than in 1921. The good roads movement resulted in great activity on highway construction, many thousands of men being employed in building and maintaining roads. Building and railroad maintenance and construction absorbed large numbers of workers during the year, although necessarily operations were considerably curtailed at the end of the year. Logging firms generally reported much larger working forces than in 1921 and also than in 1920, which would promise an equally busy season for sawmills during 1923. In the Maritime provinces, the related coal and iron and steel industries showed increased activity towards the close of the year. The pulp and paper trades were fairly busy and employment in sawmills was on a moderately high level. Highway construction, particularly in Nova Scotia, employed a substantially larger working force than for some years. The transportation industries during the first and last few months of 1922 were busy, there being the usual slack season during the summer when the St. Lawrence ports are open. In the four western provinces the general situation was consistently more favourable than elsewhere, the index numbers standing higher than that for Canada as a whole. This, in the Prairie provinces, was mainly due to expansion in railroad construction and maintenance operations. Steady improvement

was indicated moreover in iron and steel, railroad transportation, building and highway construction. British Columbia concerns on the whole registered steady advancement, and conditions generally were decidedly better than in 1921 and in some cases better than in 1920.

The situation in Montreal remained quiet during the first three months of 1922, being largely affected by the recurring "shut downs" in the railway car shops, which, in conjunction with other adverse factors, reduced the index number to 76.0 at the end of March. From April until November, however, steady improvement was registered until at the close of the latter month the index number had reached 94.7. There was a sharp decline at the end of December, when the locomotive works and many other establishments ceased operations over the holidays, but substantial recovery will no doubt have occurred during January. Toronto firms afforded a rather steadier volume of employment during the year, the variations being less pronounced than in Montreal, although the general trend was the same. Employment fluctuated very slightly about a level from January to the beginning of April, from which month activity increased steadily but moderately. The index number in Winnipeg and Vancouver reached a higher point than in Montreal and Toronto: in Vancouver it rose above the base level during August and September, standing at 102.2 and 100.7 respectively in those months. In Winnipeg, the peak attained was 99.5 at the end of October. Employment in these two cities, as elsewhere, declined at the end of the year, although considerable re-action is looked for in January.

Employment in the manufacturing industries as a whole increased gradually during 1922, until at the end of November the index number stood some 19 points higher than at the beginning of the year. While considerable curtailment was shown during

December it reflected largely the usual cessation of work over the holidays and for mid-winter inventories. Within the group, especially pronounced expansion was recorded in sawmills from January until August, from the beginning of which month greatly reduced activity was apparent, the contraction being of seasonal character. Employment in the lumber group increased over 45 per cent from the beginning of the year until the peak was reached at the close of July, and at the end of December the index number was still some 17 points higher than for December, 1921. Activity in the textile industries generally was on a higher level than in the preceding year, although the usual between-season fluctuations in activity caused the index number to show considerable variation. The garment trades, knitting mills and cloth factories, on the whole, reported improvement. In fish preserving establishments and in abattoirs and meat packing houses the level of employment was much the same as in 1921, there being large seasonal fluctuations in both years. The leather industries generally were not so fully employed as in the preceding year, although considerable recovery was indicated during the autumn and early winter. The tendency during the greater part of the year, however, was unfavourable, whereas during 1921, it had been steadily upward, the gains then indicating revival from the marked depression that had existed during the latter part of 1920. Fruit and vegetable canneries, sugar refineries and confectionery plants on the whole were moderately well employed; employment in such establishments during the earlier part of the year showed a steadily upward movement, although the very pronounced declines recorded during December reduced the index number to practically the same level as in December of the preceding year. This group is, of course, largely affected by seasonal causes. Pulp and paper manufacturers registered considerable expansion; the tendency was consistent-

ly favourable until the close of November, and presented a marked contrast to the downward trend indicated during the greater part of 1921. Activity in the rubber group remained low, the index number at its peak in June, 1922, standing at 77.6 only. This was slightly above the highest point reached in 1921, but the general situation did not show much change in that comparison. The marked recovery in building operations exerted a strong influence in the clay, glass and stone division, the index number gaining some 28 points between January and the beginning of December. During the latter month, however, reduced activity was indicated. Glass, brick and cement concerns were decidedly busier than in the preceding year. A distinctly favourable tendency was evidenced in the production of electric current, while electrical apparatus manufacturers also reported substantial gains. Employment in the iron and steel industries generally was more stable than in the preceding year; the month-end shutdowns in the railway car shops, which periodically caused large losses in the group during 1921, were much less frequent in 1922. Greatly increased production was also recorded in automobile factories, although shortage of coal and of supplies affected the situation to some extent during the summer. Rolling and forging mills, agricultural implement works, car shops and several other divisions of the industry were much more fully employed than in 1921. On the other hand, shipyards reported curtailment of operations. The tendency in non-ferrous metal concerns was upward on the whole, although employment did not reach a high level during the year. Manufacturers of petroleum products were moderately busy.

Employment in logging camps showed the usual marked seasonal fluctuations, a distinctly favourable movement, however, being in evidence during the year as a whole. From the end of January until the middle of April the gradual completion of the season's operations in many camps caused large

declines in personnel. With a brief interruption for the river drives the downward tendency continued until the beginning of August. Steady and pronounced improvement was registered during the succeeding five months, until at the end of December the index number had reached 87, standing over 25 points higher than at the same period of 1921. While the bulk of the employment was afforded in the logging camps of Ontario and Quebec, increased activity was also indicated in New Brunswick and the Western provinces.

The tendency in the mining division was upward during 1922, although the long continued strikes in the western coal fields affected employment considerably. The metallic ore mines in Ontario and in British Columbia were more fully engaged than during the preceding year, there being almost uninterrupted though rather moderate expansion. Asbestos mining in Quebec and quarrying in Quebec, Ontario and Nova Scotia was more active during the summer, partly in sympathy with the extension of building operations.

Employment in the transportation industries generally was in greater

volume than during 1921, partly a reflection of returning prosperity. Shipping and stevedoring afforded considerable employment during the whole year, in spite of the violent fluctuations to which the group is subject. The index number at its peak in November stood about 100 points higher than at the same period of 1921. Steady advances were recorded on steam railways, especially in the Prairie district. Activity on street and electric railways was well maintained, although reductions in payroll were indicated during the last three months of the year.

All three divisions of the construction and maintenance industry were decidedly more fully engaged than in 1921 and 1920. Building construction reached a high level in all provinces, but particularly so in Quebec and Ontario. The extensive campaign in road construction in the latter province, which has already been mentioned, was supplemented by considerably increased activity in other districts. The construction and maintenance departments of the railways employed larger working forces than for some time, especially in the Prairie provinces,

where approximately 30 per cent of their staffs are engaged. This industry in Ontario and the other provinces also afforded a substantial volume of employment.

The trade division reported very little change in comparison with 1921. There was the usual dullness following Christmas activity lasting until the end of February, from which month steady improvement was recorded, especially in retail trade. The index number for

the group as a whole was, however, slightly lower than during 1921.

The accompanying tables, Nos. I, II and III, give the index numbers of employment by provinces, cities and main industrial groups monthly for 1921 and 1922. In the preceding article in this issue, on page 159, a chart is reproduced which shows graphically the curve of employment as reported by employers for the years 1920, 1921 and 1922.

## UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING DECEMBER 31, 1922, AS REPORTED BY UNIONS MAKING RETURNS.

**T**HE present article on unemployment among members of trade unions deals with the situation reported during the quarter ending December 31, 1922. At the end of October the percentage of idleness stood at 3.9, or slightly over 1 per cent higher than in September. Conditions did not improve during the succeeding two months and at the close of December, 6.4 per cent of the members reported were out of work. Considerably more unemployment was shown during the corresponding quarter of last year, and the percentage of unemployment at the end of December, 1921, was almost 9 points higher than for the same period of this year. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own

trades, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the unions reporting.)

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18 and by months for 1919-20-21-22. It will be noted from this curve that conditions steadily improved during the first nine months of the year, but since the end of September a less favourable movement has been recorded each

month. The situation at the end of the year, however, was more favourable than at the end of the years 1920 and 1921.

All provinces, with the exception of Nova Scotia and Ontario, showed more unemployment during October than in the previous month. Nova Scotia registered slight improvement, but in Ontario the situation remained unchanged. Conditions did not improve in November, and, in comparison with October, workers in all provinces were less fully engaged. Owing to greater activity in garment establishments employment was in greater volume in the province of Quebec during December than in November, but in all other provinces the percentage out of work was greater than in the preceding month.

Table I on this page summarizes the returns by provinces, and Table II on page 173 shows the percentage of unemployment reported in the different groups of industries.

During October a greater volume of employment was shown in the manufacturing division than in the corresponding month of last year, particularly in garment establishments, and among iron and steel workers. The building and construction trades were also busier, and increases on a smaller scale were registered by transportation workers. Fishermen, on the other hand, were slacker.

Unemployment in the manufacturing industries was on a considerably lower level during November than in November, 1921. Garment workers were much better employed as were also workers in the iron and steel, and clay, glass and stone groups. In the building and construction trades over 7 per cent less unemployment was registered. Transportation workers were also more fully engaged, but the increase was not so great as in the building trades.

During December the manufacturing industries reported over 16 per cent

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES.

Dec. 1922	3.2	6.1	7.8	4.7	7.8	4.1	5.1	13.3	6.4

more employment than in the same month of last year. Greater activity among garment, and iron and steel workers contributed largely to this increase. Glass workers, on the other hand, showed a large percentage of idleness. Fishermen and workers in the building and transportation divisions were better employed, but retail clerks were slacker.

The accompanying tabulations (Table III) show in some detail the returns for the month ending December 31, 1922, for which month returns were received from 1,469 labour organizations with an aggregate membership of 155,006 persons, 9,982 of whom were out of work, a percentage of 6.4. The table also gives the general percentages of unemployment in the various trades and industries for October and November.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA DURING THE PERIOD OCTOBER-DECEMBER, 1922.

DURING the last quarter of 1922 there was a general downward trend in employment as indicated by the reports from the offices of the Employment Service of Canada. The volume of business during this period declined considerably from the high figure of the preceding quarter, due to the reduction in the demand for harvesters and also in some measure to the approach of severe winter weather. Compared with the period October-December 1921, however, a marked improvement was shown during the period under review, the reports indicating an increase of more than forty per cent in the number of vacancies reported and an expansion of about fifty

per cent in the placements made. The gain in applications approximated 17 per cent. A glance at the chart (on page 181), which accompanies the article on the work of the employment offices for December 1922, shows that during the first part of October the curves of applications, vacancies and placements, declined considerably. During the latter half of October all curves were marked by an abrupt rise, this expansion in business reflecting an unusual demand for farm labourers in the Province of Saskatchewan. A contraction followed during the early part of November, and applications, vacancies and placements were again at the pre-harvest level. From November 15

to the end of the year applications and placements declined uninterruptedly, while the curve of vacancies was marked by slight fluctuations. Throughout the entire quarter the curves of vacancies and placements remained at a higher level than during the same period of 1921, while the falling off in applications toward the latter part of the quarter would indicate that fewer persons were registered as out of work during 1922.

During the period October-December, 1922, the offices reported that they had made 106,469 references to positions and effected a total of 101,402 placements, as compared with 67,556 placements during the same period in 1921. Placements in regular employment during the quarter under review number-

ed 77,567 (69,917 of men and 7,650 of women) and those in casual work totalled 23,835. The number of applications registered at the offices was 140,070, of which 113,814 were from men and 26,256 from women, as compared with a total of 118,907 during the same period of 1921. Employers notified the Service of 110,590 vacancies (86,261 for men and 24,329 for women) as compared with 78,558 during the period October-December 1921.

The accompanying table gives the vacancies and placements by industries of the offices of the Employment Service of Canada in the various provinces during the period October-December 1922. A report of the work of the offices for the month of December 1922 will be found elsewhere in this issue.

## EMPLOYMENT OFFICE REPORTS FOR DECEMBER, 1922.

**A** COMPARISON of the business transacted by the offices of the Employment Service of Canada during the month of December 1922 and the preceding period, shows a slight slackening in the volume of employment offered and placements effected. When the reports are compared with those for December 1921, it is noted that during the period under review the number of vacancies offered and placements made was greater, while fewer applications for work were registered. As shown by the accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, the curves of applications and placements continued to decline, while the curves of vacancies showed a reduction during the first half of the month, followed by an increase during the latter part of the period. The reports from the offices show that an average of 1,403 and 1,219 applications daily were received during the first and second half of December, respectively, as compared with an average of 1,638 and 1,564 respectively during the corresponding periods of 1921. The average number of applications received during the latter half of November, 1922, was 1,611 daily. Vacancies notified by employers to the Service averaged 592 daily during the first half of December as compared with 1,101 during the preceding period and with 772 during the corresponding period a year ago. During the latter half of the month the average number of vacancies daily was 1,007 as compared with 950 during the same period of December 1921. Placements effected during the first half of the month averaged 853 daily, as compared with 999 during the previous period and with 704 during the first half of December 1921. During the latter half of the month the average number of placements daily was 821, as compared

with an average of 820 during the same period of last year. The placements in regular employment averaged 597 and 517 daily, while the average daily placements in casual work were 256 and 304 during the first and second half of the month respectively. The following table presents the placements effected to date by the offices of the Employment Service:—

Year	Placements.		
	Regular	Casual	Total
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,264	445,811
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522

During the month of December, 1922, the offices of the Employment Service made 22,290 references to positions and effected a total of 20,944 placements. Of these the placements in regular employment numbered 13,971 (11,969 of men and 2,002 of women), while those in casual work totalled 6,973. Vacancies reported by employers to the Service during December totalled 24,456, of which 17,616 were for men and 6,840 for women workers. The number of applications for employment registered at the offices was 32,877, of which 25,796 were from men and 7,081 from women.

Placements in regular employment by provinces during the period were as follows:—Nova Scotia, 365 men, 94 women; New Brunswick, 354 men, 72 women; Quebec, 541 men, 269 women; Ontario, 5,686 men, 588 women; Manitoba, 1,587 men, 338 women; Saskatchewan, 1,090 men, 209 women; Alberta, 1,356 men, 270 women; British Columbia, 990 men, 162 women.

### MARITIME PROVINCES.

Continued slackness in the demand for building and construction workers was reported, the construction of civic sewers and a power plant near Amherst

affording the chief employment in this group. Requests for carpenters and plasterers were received at Moncton and St. John, while at Sydney labourers were in demand for dismantling one or two burned buildings. In the logging group a few orders were received and filled but no large demand was reported. In the manufacturing group little change was noted from the dullness of the preceding period. A number of orders for domestic servants was received and in most cases the requirements were met satisfactorily.

#### QUEBEC.

Placements in the logging group continued to form a large part of the business of the offices at Hull and Montreal, from which men were sent to camps in northern Quebec and Ontario. Apart from a few vacancies for carpenters and inside workers there was little employment offered in the construction group. Some casual work, incident to the colder weather and the holiday season, was provided for numbers of men in Montreal and Quebec. At the two latter offices notices of some vacancies for women household workers were received and were easily filled.

#### ONTARIO.

Although a few workers were placed on farms from the offices at Hamilton, St. Thomas, London, Oshawa and Toronto, a reduction was noted in the number of vacancies offered in this group. Construction operations were less active, but in Western Ontario during the early part of December, building tradesmen were still employed, and at Sarnia, Windsor and London, carpenters, plasterers and bricklayers were required. During the latter part of the month, building was suspended, owing to colder weather, and apart from civic works such as the construction of storm sewers and watermains at St. Thomas, Chatham, London, Peterborough and Oshawa, few opportunities for employment were offered. Railway maintenance and construction work was not so brisk. From North Bay, Cobalt, and Timmins a few workers were sent to Cochrane and Kipewa for railway extension work, while at Hamilton, Toronto and Port Arthur maintenance work for steam and electric railways gave employment to a few. An increased number of skilled labourers and mechanics were registered for employment at all the offices, especially at Sarnia, Port Arthur, Fort William and Toronto, where the close of navigation threw

many out of work. In the logging group there was a slight contraction in demand, due to some extent to the approach of the holiday season, but an increased call was expected for the early part of the new year. Experienced bushmen were sent to camps in the northern parts of Ontario from the offices at Cobalt, North Bay, Port Arthur, Timmins, Ottawa and Toronto. In North Bay assessment work gave employment to a few. In the manufacturing group no extensive demands were anticipated before the spring. A few textile workers were placed at Kitchener and Windsor, while iron moulders, foundry labourers and skilled cabinet woodworkers were required at Oshawa, London and Toronto. Requests for household workers were numerous, but the offices reported few trained applicants available.

#### MANITOBA.

Enquiries for farm workers declined considerably, although several orders for workers were registered at Brandon, Portage la Prairie and Winnipeg. A substantial reduction was reported in the volume of employment afforded in the construction group, there being fewer calls for building tradesmen and labourers. The demand for railway construction workers decreased slightly, a few workers being placed at Brandon. There was an increased number of casual jobs which gave work to many at Portage la Prairie and Winnipeg. In the logging group numbers of bushmen, pulpwood cutters and tiemakers, were sent from Winnipeg to points in northern Manitoba and Ontario.

#### SASKATCHEWAN.

The demand for farm workers was less brisk and several calls for help were registered at Estevan, North Battleford, Prince Albert and Regina. From the offices at Moose Jaw and Saskatoon few placements were effected, but the supply of applicants, particularly of married couples, was considerably in excess of the demand. Little

work was available in the construction group and numbers of skilled and unskilled workers were unemployed. A few extra gang hands were required at Moose Jaw and North Battleford, and a number of men were placed in casual jobs from Estevan, Regina, Saskatoon and Yorkton. A few experienced workers were sent to the logging camps north of Prince Albert and to Manitoba, but the demand was not so heavy as formerly. At Regina and Saskatoon the offices reported many clerical workers, including accountants and bookkeepers, as unemployed, with few openings for this class of workers.

#### ALBERTA.

There was a continued contraction in the number of vacancies for farm work and only a few placements were made by the offices at Calgary, Drumheller and Medicine Hat. At Drumheller a number of married couples were registered for farm work, but few vacancies of this type were received. The demand for building tradesmen was not very active, but owing to action on the part of some municipalities, employment for local married men was provided on sewer and waterworks extensions. In Calgary and Edmonton several plumbers, plasterers and carpenters, were placed. There was some movement of bushmen to the northern part of the province and to British Columbia from the offices at Calgary and Edmonton, but no large demand for workers was reported. The calls for generals and house workers remained brisk with a slight shortage of applicants.

#### BRITISH COLUMBIA.

The slackness in agricultural work in the province continued, the offices reporting very few placements in this group. The building and construction group registered a decline, and numbers of skilled mechanics and labourers were unemployed. An increase was noted in the amount of casual and

seasonal employment offered, especially at Vancouver and Victoria, while at Prince George a few men were required for railway maintenance work. Conditions in the logging group were somewhat brighter, and the offices, particularly Prince Rupert, Prince George, Fernie and Vancouver, were able to place many tiemakers, loaders and teamsters at the camps. There was a steady demand for resident householder workers, especially for cooks, but the majority of placements of women were in institutional work. Day workers and charwomen were placed in approximately the same numbers as formerly.

#### Movement of Labour.

The offices of the Employment Service of Canada reported that 13,971 placements were effected in regular employment during December 1922, of which 8,289 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter 2,018 were granted the Employment Service special transportation rate, 1,329 going to points within the same province as the despatching office and 689 to points in other provinces.

The number of certificates issued by the Province of Quebec was 158, of which 55 were to bushmen going from Quebec City to camps at La Reine and LaFerne. The 103 provincial tranefers were of bushmen going from the offices at Hull and Montreal to points near Radiant, Tionaga and Dean Lake, Ontario. Workers in Ontario, who benefited by the special reduced rate, numbered 776, one of whom was a coal miner going from London to Chapman, N. B. The majority of workers transferred to points within the province were bushmen going to camps at Dean Lake, Tionaga, Bracebridde, Fort William and Port Arthur, a few were railway labourers going from North Bay to Cochrane, while 5 farm hands

were placed from Toronto on farms near Walkerville, Goderich and Sarnia. From Ottawa 6 stonemasons were despatched at the reduced rate to London, from Peterboro, 2 moulders traied to Brockville, from Toronto 1 electric welder was transferred to North Bay, while from Sudbury and Timmins 3 miners and 1 mine engineer were transferred to Galetta. Manitoba offices despatched 133 workers to points within the province and 577 to other provinces. A large percentage of the provincial certificates were issued to farm hands going to farms in the vicinity of Winnipeg, 22 were granted to bushmen going from Brandon, Portage la Prairie and Winnipeg, to camps north of Dauphin and Le Pas, a few were maids and domestic servants going to various points within the province. From Winnipeg 558 bushmen and camp workers were transferred to lumber camps at Kenora, Osla, English River and other points in Northern Ontario, while to the Province of Saskatchewan this office despatched 8 bushmen, 7 farm workers and 4 domestic servonts. From Prince Albert, Saskatchewan, one cook was transferred to Bowsman, Man. Of the 143 provincial tranefers 109 were bushmen and 29 were farm workers going to various points in the Province. In addition 2 lathers were transferred from Saskatoon to Marcelin, 2 hotel porters to Wadena and Punnichy, and from Regina 1 engineer to Bienfait. The number of workers traveling from the Province of Alberta was 62, of which 155 were going to points within the province. Of these 119 were bushmen, 23 mine workers and 8 farm hands, and the remainder were household workers going to various points near Calgary and Edmonton. Of the interprovincial transfers, 3 to the Province of Saskatchewan included farm hands and one housekeeper going to Yonkers, Unity and Macklin. From the office at Calgary 4 bushmen were transferred to Hector, B. C. British Columbia offices granted the special

rate to 68 workers, all of whom were going to points within the province. The majority of these were bushmen going to points near Burns Lake, Merritt, Giscome and Fareham. Three were labourers going to Kimberley. From the Vancouver office, 2 linotype operators were sent to Nelson, 2 blacksmiths to Fairview and McBride, 1 engineer to Hutton, and 3 general ser-

vants and 1 farm hand to small towns in the province.

Of the 2,018 workers, who were granted the Employment Service reduced rate, 1,214 were carried by the Canadian National-Grand Trunk Railway, 744 by the Canadian Pacific Railway, 58 by the Timiskaming and Northern Ontario Railway and 2 by the Pacific Great Eastern Railway.

### BUILDING PERMITS ISSUED DURING DECEMBER, 1922.

ACCORDING to reports from municipal officials tabulated by the Dominion Bureau of Statistics, the value of the building permits issued in 56 cities during December showed a slight decline from the November level, although the total was considerably higher than in December of any recent year. During the month building estimated to cost \$9,058,473 was authorized, as compared with totals of \$9,176,861 in November, 1922, and \$5,183,280 in December, 1921. The value for November therefore declined from that for the preceding month by \$118,388 or 1.3 per cent, while it stood \$3,875,193 or 74.8 per cent higher than in December of the year before.

The volume of building contemplated in Nova Scotia, Quebec and Alberta was greater than in November, there being increases in the last two provinces of \$1,825,147 or 85.8 per cent and \$1,041,176 or 259.2 per cent, respectively. The remaining provinces reported less anticipated activity in building. The actual falling off in the value of the permits issued by Ontario cities, which amounted to \$2,704,102 or 45.7 per cent, was the most pronounced, while the largest percentage

decrease occurred in Manitoba, where the permits declined by 81.8 per cent.

All provinces except Manitoba and British Columbia registered increases in the value of the building authorized as compared with the figure for December, 1921. The losses in those two districts were 60 and 55 per cent, respectively. Of the gains elsewhere, those of \$2,752,078, or 229 per cent, in Quebec, and of \$1,218,125, or 542 per cent, in Alberta were the most marked.

A review of the returns by cities shows that Montreal alone recorded an increase in the value of the building estimated as compared with November, 1922, and December, 1921, respectively, while declines in both cases were registered in Toronto, Winnipeg and Vancouver. Of the smaller centres, Moncton, Three Rivers, Chatham, Galt, Port Arthur, Welland, Woodstock, Calgary, Medicine Hat and New Westminster reported that the volume of building anticipated was higher than in November and also than in December of the preceding year.

The accompanying table shows the value of the permits issued during November and December, 1922, and during December, 1921. The 35 cities for which records are available since 1910 are marked by asterisks.

## FAIR WAGE CONTRACTS, JANUARY, 1923.

**D**URING January the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to six fair wage contracts, four of which were awarded by the Department of Public Works and two by the Department of Railways and Canals. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to the supplies ordered by the Post Office Department, subject to the Regulations

for the Suppression of the Sweating System and the securing of fair wages, etc.

## DEPARTMENT OF PUBLIC WORKS.

Retaining wall, Woodward Channel, Steveston (Fraser River), B.C. Name of contractor, The Pacific Construction Company, Limited, Vancouver, B.C. Date of contract, December 20, 1922. Amount of contract, unit prices.

Alterations and additions to Post Office fittings, Baddeck, N.S. Name of contractor, Peter L. McFarlane, Baddeck, N.S. Date of contract, November 7, 1922. Amount of contract, \$858.

Reconstruction of outer end of present wharf, St. Omer, Que. Name of contractor, Thomas P. Charleson, Otta-

wa, Ont. Date of contract, January 8, 1923. Amount of contract, \$2.85 per cubic yard of crib work complete and ballasted.

Extension of wharf and freight shed, Stewart, B.C. Name of contractors, G. B. Lawrence and E. R. Workman, Stewart, B.C. Date of contract, January 8, 1923. Amount of contract, unit prices.

DEPARTMENT OF RAILWAYS AND CANALS.

Erection of a highway steel swing bridge over the Rideau Canal at Smith's Falls, Ont. Name of contractors, The Hamilton Bridge Works Company, Limited. Date of contract, January 4, 1923. Amount of contract, \$8,000.

Construction of the Long Lake Cut-Off, Canadian National Railways. Name of contractors, Foley Brothers and Hervey. Date of contract, December

30, 1922. Amount of contract, schedule rates.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in January for supplies ordered by the Post Office Department subject to the Regulation for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions.

Nature of order	Amount of order
Making metal dating stamps and type and other hand stamps and brass crown seals.....	\$ 963.19
Making and repairing rubber stamps, daters, etc. ....	272.07
Making up and supplying letter carriers' uniforms, etc. ....	3,224.75
Repairing letter boxes, etc., and hampers	335.95
Repairing scales .....	195.80
Supplying mail bag fittings.....	5,616.72
Supplying ink.....	433.90

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1923.

THE movement in wholesale prices during the month was slight, declines in agricultural products and foods being offset by advances in other groups, leaving the general level as indicated by the index number the same as for December. The family budget in terms of retail prices advanced somewhat, due chiefly to advances in dairy products and meats.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.52 at the beginning of January as compared with \$10.39 at the beginning of December, 1922; \$11.03 for January, 1922; \$14.48 for January, 1921, \$16.92 for June, 1920 (the highest point reached); and \$7.73 for January, 1914. The total for food, fuel, and rent was \$21.18 for January as compared with \$20.97 for December, 1922; \$21.52 for January, 1922; \$25.30 for January, 1921; \$26.92

for July, 1920 (the highest point reached); and \$14.49 for January, 1914. The largest advances were in butter and eggs, though sugar, beef, veal, mutton, fresh pork and potatoes were higher. Salt pork, bacon, lard and evaporated apples were slightly lower. Fuel and rentals were slightly higher.

In wholesale prices the Departmental index number stood at 223.0 for January, the same figure as for December, 1922, as compared with 227.7 for January, 1922; 281.3 for January, 1921; 356.6 for May, 1920 (the peak); and 136.5 for January, 1914. Agricultural products and foods were generally lower while nearly all other groups were slightly higher. The principal advances were in western cattle, sugar, raw cotton, raw silk, bar silver, coke, and turpentine, and smaller advances in Ontario oats, live hogs, fowl, butter, cheese, beans, canned corn and peas,

cotton fabrics, hessians, maple lumber, nails, copper wire, white lead, and raw rubber. The principal declines were in western grains, hay, bacon, turkeys, eggs, gasoline, cement, linseed oil and benzine, and smaller declines in dressed hogs, salt pork, sheep, lemons, oranges, currants, prunes, salt, jute, resin, and some raw furs.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices for the several commodities in relation to the average prices for the base period, 1890-1899, these being, therefore, made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Departmental list) including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, declined to 153.1 in January as compared with 154.2 in December, 1922; 148.0 in January, 1922; 195.2 in January, 1921; 230.2 in January, 1920; and 103.1 in January, 1914. Eggs showed the largest decline, but hay at Montreal, sheep, bacon, and gasoline were also substantially lower, while oats, butter, halibut, raw cotton, lead, and turpentine showed the greatest advances.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, which includes thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, and based upon price levels in 1913 as 100, stood at 147 for December, the same as the figure for November, as compared with

145 for October; 144 for September; and 145 for December, 1921. As compared with November, goods imported and consumers' goods were higher and all other groups were unchanged. As compared with October all groups were higher except goods imported which were lower.

The Canadian Bank of Commerce index numbers of exports and imports were higher. The former now stands at 151.97 as compared with 146.26 in December, and the latter at 165.29 as compared with 158.63 in December. The combined number now stands at 158.63 as against 153.95 last month.

The table of retail prices and rentals shows the prices at the beginning of January of seventy-two staple food-stuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry

starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this

purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices.

Fresh meats showed the first advance since July. Sirloin steak averaged 26.7c per pound in January as compared with 26.4 in December. The advance was general in all provinces except New Brunswick, Saskatchewan and British Columbia, which averaged slightly lower. Round steak showed about the same general advance as sirloin at 21.7c

per pound. Rib roast was up from 19.6c per pound in December to 20.1c in January, averaging higher in all provinces except New Brunswick and Alberta. Shoulder roast was also slightly higher in the average at 14.5c per pound. Veal advanced from an average of 18c per pound in December to 18.3c in January. Mutton averaged  $\frac{1}{2}$ c per pound higher at 27.2c. Roast pork averaged higher in all provinces except Manitoba, Saskatchewan and Alberta, in which it was slightly lower. Salt pork and bacon were down, the former from 26.1c per pound in December to 25.8c in January and the latter from 41c per pound in December to 40.8c in January. Boiled ham was also slightly lower at 60 $\frac{1}{2}$ c per pound. In fresh fish, cod and whitefish averaged slightly higher, while halibut was down somewhat. Salt herring and salt cod were slightly lower. Lard was steady.

Fresh eggs showed a general advance to 63.3c per dozen in January as compared with 60.3c in December, 51.6c in November, 41.7c in October and 35.8c in September. Cooking eggs also averaged slightly higher at 46.6c per dozen. Milk was slightly lower in Halifax, Galt, New Westminster and Vancouver. Other localities were unchanged. Dairy butter advanced to 40.5c per pound in the average in January as compared with 38.2c in December. The increase was general in all provinces except British Columbia, where it was slightly lower. Creamery butter averaged 1c per pound higher at 45.5c; the increase was general. Cheese advanced slightly to 30.7c per pound.

Bread was unchanged in the average, being higher in Bathurst and lower in St. John's, Que., Kitchener, Stratford and Nanaimo. Soda biscuits were steady. Flour was unchanged in the average, advances in some localities being offset by declines in others. Rice

and tapioca were slightly higher, the former at 10.5c per pound and the latter at 12.4c. Canned tomatoes were unchanged, while canned peas and corn were slightly lower. Onions advanced from 4.4c per pound to 4.6c. Potatoes were slightly higher in the average at \$1.17 per 90 pound bag as compared with \$1.14 in December. All provinces were higher except New Brunswick. Evaporated apples were down 1c per pound in the average to 21.6c. Prunes were steady. Raisins were slightly lower but currants advanced. Raspberry jam was down from 99.8c per four pound tin to 99.1c. Canned peaches were  $\frac{1}{2}$ c per can lower at 33.4c. Corn syrup was slightly lower at 49.3c per five pound tin. Granulated sugar advanced to 9.6c per pound in January as compared with 9.3c in December and 9c in November. Tea was slightly higher in the average while coffee was down somewhat, the former at 59.7c per pound and the latter at 53.6c. Vinegar, salt and pepper were unchanged. Cream of tartar was down from 70.7c in December to 69.6c in January. Laundry starch and soap were steady.

Anthracite coal averaged \$18.42 per ton in January as compared with \$18.28 in December. Increases occurred in Halifax, St. Hyacinthe, Belleville, Galt, Stratford, Cobalt, Fort William, and declines in St. John, Hamilton and Brandon. Bituminous coal was down in the average from \$12.05 in December to \$11.84 in January. Hard wood four feet long advanced from \$12.61 per cord in December to \$12.90 in January. Soft wood four feet long rose from \$9.42 per cord in December to \$9.51 in January, being higher in Cobalt. Coal oil averaged  $\frac{1}{2}$ c per gallon higher at 31.6c. Rent was slightly higher at St. Hyacinthe, but no other changes were reported.

### Wholesale Prices.

**GRAINS AND FODDER.**—Wheat No. 1 Manitoba Northern declined from \$1.13 per bushel the last week in December to \$1.07 the last week in January. Ontario winter wheat remained steady at \$1.13 per bushel. Western barley declined from 57c per bushel toward the end of December to 53c by the end of January. Western oats were down from 48c per bushel to 47c, while Ontario oats rose from 43c per bushel to 47c. American corn declined from 90c per bushel at the beginning of January to 85c in the last week. Flaxseed which was quoted at \$2.15 the last week in December declined to \$2.10 the first week in January and then advanced to \$2.17 in the last week. Hay at Montreal was \$1 per ton cheaper at \$16. Bran and shorts were steady.

**ANIMALS AND MEATS.**—Cattle at Winnipeg advanced from \$5 per hundred pounds in the last week of December to \$6 in the last week of January. Choice steers at Toronto remained steady. In dressed beef hindquarters advanced from 16c per pound to 17c. Dressed hogs declined from 17c per pound to 16c. Bacon was down from 32c per pound in December to 28c in January, while hams advanced from 22c per pound to 25c. Sheep advanced \$1 per hundred pounds to \$7.50. Dressed lamb was 4c per pound higher at 28c. Dressed fowl at Montreal advanced from 25c per pound to 30c, and turkeys from 40c per pound to 42c.

**DAIRY PRODUCTS.**—Creamery butter at Montreal advanced from 40c per pound toward the end of December to 41½c the last week in January and at Toronto advanced from 43c the last week in December to 45c at the end of January. Fresh eggs at Montreal which were quoted at 80-90c per dozen about the middle of December declined to 75-85c towards the end of the month and by the end of January were quoted at 48-50c. Storage eggs at Toronto were 2c per dozen cheaper at 38c.

**FISH.**—No improvement was reported in the market for dried and pickled fish. The price of dried cod at Halifax was quoted at \$5-6 per quintal. Pickled herring was reported at \$4.00 per barrel ex-vessel and spring mackerel at \$6.50 per barrel.

**FRUITS AND VEGETABLES.**—Bananas at Toronto were slightly higher at 9c per pound. Lemons were down from \$6 per box to \$4.50 and oranges from \$6.50 per box to \$5. Currants were 3c per pound lower at 16½c. Prunes declined from 14½c per pound to 11½c. Potatoes at Montreal rose from 90c per 90 pound bag to \$1.10. Hand picked beans advanced from \$3.65 per bushel to \$3.95. Canned corn was down from \$1.45 per dozen tins to \$1.27, while canned peas were higher at \$1.47.

**MISCELLANEOUS FOODS.**—Oatmeal advanced from \$4 per 98 pound bag to \$4.25. Tapioca was slightly higher at 10c per pound. Flour was steady. Granulated sugar at Toronto rose from \$8.39 per hundred pounds to \$8.54. Salt was lower.

**TEXTILES.**—No changes were reported in woollens. Raw cotton at New York advanced from 25.5c per pound to 27.75c. Coloured cotton fabrics were slightly higher at 78.85c per pound. Raw silk at New York was 20c per pound higher at \$8.50. Jute declined from 10.78c per pound to 10.27c and hessians advanced from 12.51c per yard to 12.66. Floor oilcloth was slightly lower at 38c per yard.

**HIDES, LEATHER, BOOTS AND SHOES.**—Hides were steady.

**METALS AND IMPLEMENTS.**—Sheets were steady. Antimony, lead and quicksilver were slightly higher. Bar silver at New York advanced from 62 ¾c per oz. to 67 ⅛c. Horseshoes were down from \$7.15 per keg to \$6.95.

**FUEL AND LIGHTING.**—Connellsville coke at the ovens advanced from \$7.50-8.00 per ton to \$8.00-8.50. Gasoline was 2c per gallon lower at 27c.

\*Preliminary figures. †Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915. ‡Revised.

**BUILDING MATERIALS.**—Pine, shipping culls, rose from \$60 per M. to \$62 and hard maple from \$45 per M. to \$50. Rough lumber at Victoria advanced from \$14 per M. to \$16 and flooring from \$50 per M. to \$55. Fire bricks at Montreal were higher at \$60-\$90 per M. Cement declined from \$3.63 per barrel to \$3.45. Wire nails were 25c per keg higher at \$4. Sash cord rose from 58c per pound to 61c. Copper wire was slightly higher at 16.75c per pound. White lead advanced from \$13.45 per hundred pounds to \$14.20. Linseed oil declined slightly to \$1.09 per gallon,

while turpentine advanced from \$2.10 per gallon to \$2.25. Benzine was 3c per gallon lower at 26c.

**HOUSE FURNISHINGS.**—No changes were reported.

**DRUGS AND CHEMICALS.**—Bleaching powder declined from 2 $\frac{3}{4}$ c per pound to 2 $\frac{1}{2}$ c.

**MISCELLANEOUS.**—In raw furs, skunk was down from \$1.50-\$3.75 to \$1.25-\$3.00 per skin. Malt was steady. Raw rubber at New York advanced from 22 $\frac{1}{4}$ c per pound to 27c.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES.

**T**HE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain.

**WHOLESALE PRICES.**—The Board of Trade index number of wholesale prices (1913=100) stood at 155.3 for December, a fall of 1.2 per cent from the November level, reductions of 2.1 per cent and 0.6 per cent being shown in food and industrial materials respectively. Considerable declines were shown in cereals, in "foods other than cereals, meat and fish", and in cotton. The groups relating to meat and fish and to iron and steel were higher for December than for November. Price increases were recorded in December for forty-four items, the largest being an increase of nearly 20 per cent in fish, increases of 10 per cent in tapioca and Scotch and English mutton, and one of about 14 per cent in rubber. There were 67 price decreases, the largest of which were:

oranges, over 25 per cent, British barley, over 15 per cent, Danish bacon. Danish eggs, New Zealand butter, onions, cambrie warps, aniline oil and calf skins, between 10 per cent and 14 per cent. The average for the year 1922 was 158.5, as compared with 197.2 for 1921. During 1922 prices fell gradually from January to September, recovered slightly in October and November and dropped again in December to a point below the August level.

The *Economist* index number of wholesale prices at the end of January was 196.5 (1901-05=100) showing a sharp rise of 1.4 per cent on the level at the end of December. Cereals and meats declined in price one point while all other groups contributed to the advance, the most notable increases being in textiles, which increased in price 1.8 per cent during the month under review, and minerals, which advanced 4.8 per cent.

The *Statist* index number, in continuation of Sauerbeck's figures, showed a slight decline during December, and stood at 129.1 at December 31, a fall of 1.1 per cent from the level at November 30. Foodstuffs rose 0.9 per cent but materials declined 2.5 per cent. Minerals rose slightly while textiles and sundries

declined. The average for the twelve months of 1922 was 132, which is a lower figure than for any year since 1915.

The index number of wholesale prices in England calculated by the Federal Reserve Board of the United States showed during 1922 mild fluctuations in "all commodities" with the level at the end of the year at 165, on the base prices in 1913=100, as compared with 172 in December, 1921. Goods produced and goods imported were respectively at 176 and 152 in December, 1921, but the former declined and the latter advanced steadily until they reached the same level of 163 for December, 1922. Goods exported were fairly steady throughout the year, being at 158 in December, 1921, and 157 in December, 1922. Raw materials and consumers' goods declined considerably during the year, and producers' goods declined one point.

#### Belgium.

WHOLESALE PRICES.—The official index number of wholesale prices calculated by the Ministry of Industry and Labour on the base prices in April, 1914=100, continued during November the upward trend of the previous month. The total index number increased from 385 to 408, or 6 per cent. With the exception of tobacco, which showed no change, all groups showed considerable increases, the chief of which were tar and its products, 17 per cent; raw rubber, 15 per cent; textiles, 10 per cent; paper products, 8 per cent. The total index number for December showed a decline of one point, to 407. Information by groups is not yet available for December.

COST OF LIVING.—Of the index numbers calculated by the Ministry of Industry and Labour, that for the Kingdom (unweighted) showed no change in its level on December 15 from the previous month, remaining at 384 (April, 1914,=100), while the weighted index number of thirty foods showed the slight decrease of four points, or about one per cent, to 429.

#### Bulgaria.

WHOLESALE PRICES.—The index number published by the Director General of Statistics (1913=100) increased only six points or about one-quarter of one per cent, during November, thus reaching the level of 2564.

RETAIL PRICES.—The official index number of retail prices of forty-seven articles in four chief cities (1901=100) increased from 3442 in August to 3450 in September and 3490 in October, a total increase during the two months' period of only 1.4 per cent.

#### Czecho-Slovakia.

WHOLESALE PRICES.—The index number of wholesale prices published by the Narodni Listy has as base prices in July, 1914=100. The figures are published for the following four groups: agricultural products and foodstuffs; textiles and leather; coal and metals; mineral oil products, paper, building material, fertilizer, alcohol, timber and glass. The total index number showed a steady and marked decline from October, 1921, the first month for which data are available. By November, 1922, wholesale prices were almost cut in two. The general index number at intervals during the period is as follows:

1921, October, 1824	August, 1233
1922, January, 1633	September, 1076
March 1547	October, 996
June, 1438	November, 957

COST OF LIVING.—The index number calculated by the Government Statistical Office showed further declines in November, the group comprised of foodstuffs, fuel, petroleum and soap dropping from 1016 in October to 984 in November, or 3.1 per cent, and the group textiles, shoes and men's hats dropping from 1219 to 1156 or 5.2 per cent during the same period.

#### France.

WHOLESALE PRICES.—The index number of the Statistique Générale (1901=100) stood at 418.4 at the end of

\*For South Africa, Australia and New Zealand base is taken as 1000 instead of 100. *a*. Average for year. *b*. Quarter beginning in specified month. *c*. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. *d*. New index number is joined to old index number (38 commodities) and all converted to base 1913-100. *e*. The commodities in these two index numbers are in the one case, articles chiefly exported, in the other case, articles chiefly imported. *f*. First of month. *g*. Middle of month. *h*. End of month. *j*. Monthly average. *k*. New Göteborgs Handels och Sjöfartstidning.

December, an increase of 2.8 per cent on the November level. Foods increased 5.3 per cent, and industrial materials increased 1.1 per cent, all groups contributing in each case. By the end of January prices, affected by the political situation and falling exchange value of the franc, reached the highest level since January, 1921, and stood at 447.3. This showed an increase of nearly 6.9 per cent over the previous month. Information by groups is not yet available.

#### Italy.

**WHOLESALE PRICES.**—The index number of prices at Milan, published by the Chamber of Commerce and Industry showed a decrease in December of 3.3 per cent from the November level to 103.59, the lowest figure since August, 1922. All groups declined during the month with the exception of construction materials, which advanced slightly. The total index number for foods declined 3.1 per cent and that for industrial materials 3.7 per cent. The base of the index number is the average of prices from May to December, 1921, taken as 100.

#### India.

**COST OF LIVING.**—The official index number of cost of living at Bombay compiled by the Bombay Labour Office rose one point in December. The yearly average reached by the index in 1922 was 164, which was considerably a lower level than for 1919, 1920 or 1921, in which years the index number was 175, 183 and 173 respectively. During December there was a rise of 1.3 per cent in all foods due to a seasonal rise in price of 34 per cent in potatoes and onions. All food grains declined with the exception of turdal and gram. Fuel and lighting and rent showed no change and clothing declined 5.4 per cent.

#### United States.

**WHOLESALE PRICES.**—The index number calculated by the Federal Reserve Board, with prices in 1913 taken as 100, was 164 for both November and Decem-

ber. Goods produced remained unchanged for December, while goods imported rose one point. Raw materials showed no change, but there was a slight downward movement in producers' goods and an increase in consumers' goods.

The Bureau of Labour Statistics index number of wholesale prices was at the same level for December as for the previous month. In spite of this, there were considerable advances in certain farm products, clothing materials, chemicals and house furnishing goods. In farm products there was an increase of  $1\frac{1}{2}$  per cent and the cloths and clothing group was about 1 per cent higher than in November, owing to increases in cotton woven goods, cotton yarns, worsted yarns and raw silks. There were decreases in important fuel and lighting materials and among metals and metal products. Building materials and the miscellaneous group showed no change.

*Gibson's* average index number of wholesale prices of twenty-two articles for January was 72.0 as compared with 73.1 for December, thus showing a decrease of 1.5 per cent.

Wholesale prices as measured by Bradstreet's index number declined considerably in December and recovered slightly in January. During the latter month foods continued to decline, but certain groups, notably textiles and metals, advanced considerably. The index number as of February 1 totaled \$13.7236, an increase of one-tenth of one per cent over the previous month.

**COST OF LIVING.**—The official index number of the Bureau of Labour Statistics for the quarter ending December, 1922, showed the following percentages of increase from 1913 (average for the year) to that date: food, 46.6; clothing, 71.5; housing, 61.9; fuel and light, 86.4; furniture, 108.2; miscellaneous, 100.5; total 69.5. All items with the exception of the miscellaneous group showed increases on the level of the previous quarter. The total budget was 1.9 per cent higher for the fourth quarter of the year than for the third.

## CHANGES IN THE COST OF LIVING IN CANADA AND IN OTHER COUNTRIES FROM 1913 TO 1922.

---

SINCE 1914 index numbers to measure changes in the cost of living, have been calculated for many countries throughout the world. Prior to 1914 records of prices were maintained and published for a number of countries, and in some cases index numbers of prices were calculated and published to show the changes from time to time in the general level of prices. In most cases, however, such index numbers were calculated from wholesale prices, but while in some instances index numbers of retail prices were calculated, these were usually confined to prices of food or of food and fuel, house rentals being dealt with in some cases. Retail prices of clothing were rarely included in such calculations, apparently owing to the difficulty in securing prices of unchanged grades and qualities from time to time. During the war, however, not only did the governments of most countries undertake the collection and publication of retail prices of food and fuel but in many cases prices of clothing and other items of expenditure were also included in the compilation of the index numbers, cost of living index numbers covering all items being thus constructed. As prices of clothing in most countries rose more steeply than the prices of other commodities it was desirable to include in the calculation the cost of such an important item in family expenditure. Apart from the virtual necessity of so doing it would appear that when the prices of clothing had risen upwards of 100 per cent within four years a margin of error in the clothing figures for instance of 10 per cent would not seriously detract from the value of the calculation, whereas during the comparatively steady conditions before the war such a margin of error would have been serious. For instance, in Canada it appears from the meagre

statistics available that on the average retail prices of clothing did not rise by more than 10 per cent between 1908 and 1913. (LABOUR GAZETTE, August 1919, p 998.)

The same principle applies to figures for items of miscellaneous expenditure such as furniture, household sundries, and various services which altogether amount to from 10 per cent to 30 per cent in the family budget of the average workingman's family.

Comparison of the available index numbers of retail prices of foods with those for wholesale prices over long periods of years indicates that on the whole wholesale and retail prices rise and fall similarly, there being, however, important differences at times, usually when violent changes appear in the movement. Similarly index numbers of retail prices of foods usually serve to show approximately the changes in the cost of living, but at times of great change they do not. From 1914 to 1920 prices of food changed to a greater degree in nearly every country than did averages of all items, but after July 1920 prices of food fell more steeply than other items.

Nearly all of the index numbers of cost of living or of retail prices now calculated have been constructed since 1914, although in some cases the records of prices of foods extend back for some years prior to the war. In most instances, however, the year 1913, or July, 1914, has been adopted as base period, as being the period immediately before the beginning of hostilities in Europe and, therefore, sufficiently representative of pre-war conditions for the calculation of an index number over a period of war and post war conditions. It is, however, usually considered that a five or ten year period is preferable as pro-

viding a broader basis and one more likely to represent what might be considered normal conditions. Thus in New Zealand the Government Statistician adopted as base period the five year period 1909-1913, and in Canada the Canadian Bank of Commerce in constructing a wholesale prices index number, adopted the same five year period. In most cases, however, the necessary statistics back to 1909 would not be available, or considerable time would be required for the collection and compilation. In most of the countries the construction of the index numbers was gradual, there first appearing an index of retail food prices then figures as to changes in prices of fuel, rent, clothing and sundry items and finally figures given more or less tentatively at first as to the average change in all items. In Great Britain and several other countries pre-war index numbers of retail food prices were dropped and new calculations published based upon July, 1914, or the year 1913.

Index numbers of prices, wholesale and retail, for those countries for which they are available are published regularly in an increasing number of journals and it is usual to reduce such index numbers to a common basis, (the year 1913=100) to make the comparison of levels in various countries at a given date possible at a glance. In the LABOUR GAZETTE a table of the index numbers of wholesale prices issued from month to month for various countries has been given regularly since 1911, when the Department began the regular monthly publication of an index number of wholesale prices for Canada. At that time the table contained only two index numbers for Great Britain and one for the United States, one for France being soon included followed by one for Australia. At the present time the table of index numbers of wholesale prices for various countries contains twenty indexes, while there are almost as many omitted owing to considerations of space but referred to regularly in the reading matter. An equal number of indexes of

retail prices of foods or of cost of living is also included in another table and given in the notes. These tables for the current issue appear in the previous article. The present article deals only with those index numbers of cost of living which show by the principal items of expenditure the changes in the cost of living (all items) since 1913. A number of such cost of living index numbers are not included owing to lack of sufficient information in detail.

#### Canada.

In Canada the index number of wholesale prices calculated from month to month by the Department of Labour and published in the LABOUR GAZETTE was from its inception until 1915 widely regarded as an indication of the rise in the cost of living. These records and index numbers were first published in 1910, and have been continued since.

As stated in the first report on prices issued by the Department, "Wholesale Prices in Canada, 1890-1909," it was intended to construct a retail prices index number in order to indicate more accurately from month to month the changes in the cost of living. In the meantime, the Department began the publication in the February, 1910, issue of the LABOUR GAZETTE, of the retail prices of staple foods, coal, wood, coal oil, and rent in nearly sixty cities. These figures were averaged for each year and published in appendices to the Department's annual reviews of Wholesale Prices in Canada from 1911 to 1917.

During the investigation into the Cost of Living in Canada by the Board of Inquiry, appointed in December, 1913, statistics for this list of goods were obtained for December, 1900, and December, 1905. From these figures and from those published in the LABOUR GAZETTE for December, 1910, 1911, 1912, and 1913, respectively, series of index numbers of food, and of fuel, light, and rent were calculated, the results being published in the report of the Board. Calculations were also made of the cost

of a family budget of these commodities in terms of these prices, and this calculation has been kept up to date month by month and published in the LABOUR GAZETTE each month since August, 1915.

In addition to the statistics as to retail prices of food and fuel, and as to rates for rent, the Department, since 1919, secured figures as to retail prices of staple lines of clothing, including footwear, from retail dealers throughout Canada, for the years 1913-1920. The figures relate to prices prevailing at the end of the year in each case, but since 1920 prices during the spring have been secured. From these quotations the percentages of changes in the cost of clothing have been calculated. Information was also secured as to the prices of household supplies, furniture, furnishings, etc., and an estimate has been made as to the percentage changes in the cost of miscellaneous items, the effect of the information gathered showing that such changes are approximately equal to the average changes in other items. The percentage changes in food,

fuel and rent have been calculated from the weekly budgets published in the LABOUR GAZETTE from month to month, and the accompanying table summarizes the changes from year to year by groups, the figures for each group and for all items weighted according to the family budget method. This table therefore contains a tentative cost of living index number, based on prices in 1913, pending the calculation of a more complete index number in process of construction. The figures in clothing and sundries are to be regarded as merely approximate owing to difficulties in dealing with apparent changes in the grades of the items for which quotations are obtained.

## Great Britain.

The *Ministry of Labour Gazette*, issued monthly by the Ministry of Labour, formerly by the Labour Department of the Board of Trade, published an index number of retail prices of foods, each year prior to 1914, based upon prices in 1900 as 100, but from July, 1914, issued monthly an index number based upon July, 1914, as 100 and at later dates included figures for other items covering all items back to 1914. This index

number is weighted according to the importance of the various items from the information secured in an investigation in 1904. As in most of the countries, prices of clothing advanced more steeply than the prices of other items. The peak of the price trend of all items was reached in November, 1920, whereas the peak in Canada and in the United States was reached in July, 1920.

### France.

The General Statistical Office of France has published for some years index numbers showing the changes in the prices of eleven important foods and also of coal oil and alcohol, figures being issued for Paris and for the towns of more than 10,000 inhabitants. During the war the statistics were increased and a Commission of Studies on the Cost of Living has issued an index number

showing the changes in the various items by groups, basing the index numbers on prices in 1914 as 100. As in Great Britain the peak was reached at the end of 1920. Similar index numbers have been calculated for other parts of France.

### Italy.

The Municipal Labour Office for Rome has issued statistics as to the changes in the cost of living in Rome covering the period since 1914. For certain other cities in Italy similar index numbers have been constructed, but are not at present available in detail.

**Germany.**

The Federal Statistical Office has issued statistics as to the cost of living since 1920, the base period being prices in 1913-1914 as 100. Clothing has been included since the beginning of 1922. These index numbers show great increases owing to the depreciation in the paper mark. Since October, 1922, this has been still more pronounced and while the latest index number given is for October the mark has fallen still more since that date.

**United States.**

Three cost of living index numbers are widely quoted in the United States. That of the United States Bureau of

and 1918. The National Industrial Conference Board, an organization of employers' associations, has constructed an index number, using the Bureau's figures for foods but has secured its own figures for other items. In Massachusetts the Special Commission on the Necessaries of Life has calculated index numbers for all items monthly back to 1910, for the State of Massachusetts. In this index and that of the National Industrial Conference Board the items are weighted by figures chosen from the results of various investigations into cost of living prior to 1914. The index numbers resulting are slightly different from those of the United States Bureau of Labour Statistics.

#### Depreciation of Currency.

As in Germany the prices movements in many countries have been great owing to the depreciation in the currency and the issue of large amounts of paper money not redeemable on demand in gold as before July, 1914. In some cases such paper money has almost no value and trade is carried on practically by barter, any foreign money of real value introduced soon disappearing

## FATAL INDUSTRIAL ACCIDENTS REPORTED DURING THE LAST QUARTER OF 1922.

INFORMATION received by the Department for the last quarter of 1922 shows 322 fatalities in the industries and trades of Canada, as compared with 334 in the previous quarter and 236 in the corresponding quarter of last year. Of these fatalities 103 occurred in October, 104 in November and 115 in December, as against 85 in October, 83 in November and 64 in December of 1921. Ninety fatalities were reported in the transportation and public utilities group, 58 in mining, non-ferrous smelting and quarrying, 53 in logging, 36 in the manufacturing industries, and 17 in agriculture.

There were also 23 accidents reported during the quarter which occurred earlier in the year.

In addition to the fatalities due to falls, drownings, and trains, there were 20 fatalities due to being caught in machinery, chains, etc., 11 to infection and diseases arising from injuries, 6 to electricity and three were caused by the shifting of loads when their supports gave way. In the mining, non-ferrous smelting and quarrying group 21 deaths were due to cave-ins, falls of rock, etc., 4 were caused by dynamite explosions, 2 by explosions of gas and 4 by being overcome by gas in mines.

The following table, while it does not necessarily include all the fatal industrial accidents that may have occurred, has been prepared from information received from all sources available.

## FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1922.

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE—</b>				
Farmer.....	Near Kingston, Ont.....	Oct. 9	52	Fell from tree.
Farmer.....	Webb, Sask.....	" 9	38	Kicked by horses. Fell from grain tank when board gave way.
Farmer.....	Glenister, Alta.....	" 21		Over-exertion while fighting forest fires.
Farmer.....	Carolside, Alta.....	" 24	68	Team bolted when ring broke and neckyoke fell.
Farmer.....	Westchester, N.S.....	" 27		Kicked by a horse.
Farmer.....	Lac Pelletier, N.S.....	Nov. 2		Caught between belt and pulley when placing belt on threshing machine.
Farmer.....	South Indian, Ont.....	" 3	53	Delayed blast.
Farm hand.....	Neepawa, Man.....	" 18	38	Fell from ladder.
Farmer.....	Near Swift Current, Sask.....	" 24	26	Fell from horse.
Farm hand.....	Near Lindsay, Ont.....	" 25		Cave-in while loading gravel at pit.
Farmer.....	Hastings, Ont.....	" 28		Thrown from wagon when horses bolted.
Farmer.....	Glidden, Sask.....	Dec. 12		Frozen.
Farmer.....	Near Brunkeld, Man.....	" 13		Struck by flying piece of saw.
Farmer.....	Yarmouth Township, Ont.....	" 19		Trampled by horses.
Farmer.....	Near Walsh, Ont.....	" 21		Struck by tree which rebounded when another fell on it.
Farmer.....	Indian River, P.E.I.....	" 22		Frozen during blizzard.
Farmer.....	Grantham Township, Ont.....	" 30	37	Trampled by bull.
<b>LOGGING—</b>				
Labourer.....	Port Alice, B.C.....	Oct. 1	21	Fell into water when struck by sling.—
Woodsmen (5).....	Ocean Falls, B.C.....	" 2		Landslide.
Driver.....	Hawkesbury, Ont.....	" 4	46	Load shifted causing fall.—
Labourer.....	Ottawa, Ont.....	" 4	17	Caught in conveyor chain.
Driver.....	Shawville, Que.....	" 5		Fell from load when stake securing it broke.—
Logger.....	Brackendale, B.C.....	" 5		Cable broke; struck by weight attached.
Logger.....	Aldergrove, B.C.....	" 10	53	Struck by falling tree.—
Bushman.....	Sioux Lookout, Ont.....	" 12	24	Struck by tree.—
Brakeman.....	Orford Bay, B.C.....	" 18	36	Fell from train.—
Logger.....	Palmer's Landing, B.C.....	" 19	44	Crushed by rolling log.—
Labourer.....	Port Arthur, Ont.....	" 21		Struck by train.
Logger.....	Murrayville, B.C.....	" 30	58	Struck by stub from tree hit by another when falling.—
Labourers (2).....	Field, Ont.....	Nov. 1	22—22	Drowned; canoe capsized.—
Donkey engineer.....	Port Alice, B.C.....	" 2	26	Drawn around drums on donkey engine.
Brakeman.....	Watcomb, B.C.....	" 9		Collision; air hose on car broke.
Logger.....	Headquarters, B.C.....	" 10		While yarding, tree rebounded when struck by log.—
Woodsmen (9).....	Lake Fifteen Miles.....	" 11		Drowned.—
Employee at pulpwood camp.....	Black Bay Peninsula.....	" 11		No particulars.—
Watchman.....	Menzies Bay, B.C.....	" 16	62	Crushed while crawling under logs.—
Boomman.....	Redonda Island, B.C.....	" 17	35	Fell from boom stick.—
Woodsmen.....	Lake Pogamasing.....	" 22		Drowned.—
Woodsmen.....	Flanders, Ont.....	" 22	50	Struck by tree.—
Labourer.....	Rock Lake, Ont.....	" 24	60	Struck by tree.—
Signalman.....	Grassy Bay, B.C.....	" 24	19	Fell from train.—
Woodsmen.....	Le Pas, Man.....	" 27	19	Struck by falling tree.—
Woodsmen.....	Madawaska Co., N.B.....	" 29	21	Jammed between logs.—
Woodsmen.....	Near Red Pine, N.B.....	" 30		Struck by branch.—
Logger.....	Woodbrite, B.C.....	Dec. 1		Struck by log while cleaning chute.—
Labourer.....	Bancroft, Ont.....	" 2		Struck by tree.—
Labourer.....	Capilano, B.C.....	" 5	47	Crushed by rolling logs.—
Cooke.....	Brule Lake, Ont.....	" 6	19	Burned.
Teamster.....	Creslon, B.C.....	" 6	48	Fell from load when cinch came loose.—
Woodsmen.....	Mistatin, Ont.....	" 9	30	Struck by falling tree.—
Logger.....	Radiant, Ont.....	" 12	30	Struck by log.—
Sawyer.....	Whitcourt, Alta.....	" 13	52	Struck by falling tree.—
Labourer.....	Dean Lake, Ont.....	" 14	56	Struck by tree.—
Watchman.....	Campbell River, B.C.....	" 14	73	Crushed by log.—
Woodsmen.....	Lake Temiskaming, Ont.....	" 14		Drowned.—
Labourer.....	Laforest, Ont.....	" 19	40	Struck by tree.—
Sawyer.....	Slocan City, B.C.....	" 20	24	Struck by falling tree.—
<b>FISHING AND TRAPPING—</b>				
Hatchery helper.....	Winnipegosis, Man.....	Nov. 27	29	Drowned.
Trapper.....	North Squin River, Ont.....	" 23		Drowned—broke through ice.
Trapper.....	Rainy Lake, Ont.....	Dec. 2	35	Perished on ice when lost in storm.
Trapper.....	Manitogogan River, Man.....	" 2		Drowned.
Trapper.....	North of Kapuskasing, Ont.....	" 8		Frozen; lost in bush.
Fishermen (2).....	Cocagne River, N.B.....	" 7	60—18	Drowned while fishing smelts.
Fisheries overseer.....	Prince Rupert, B.C.....	" 1		Struck by falling tree.

## FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1922—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>				
<i>Metaliferous mining:</i>				
Miner.....	Premier, B.C.....	Oct. 10	Over 21	Crushed between descending cage and guard.
Miners (3).....	Hollinger Mine, Ont.....	"	21 35	Car of steel fell down shaft on to cage
Shift boss.....	Kirkland Lake, Ont.....	" 25	41	Fell from bucket down shaft.
Employee at mill.....	Kimberley, B.C.....	" 6	36	Crushed by truck.
Miner.....	Stewart, B.C.....	" 18	.....	Dynamite explosion.
Miner.....	Sandon, B.C.....	" 18	50	Struck by falling rock.
Miner.....	Ainsworth, B.C. (White-water).....	" 19	21	Snow slide.
Miner.....	Slocan, B.C.....	" 18	21	Struck by falling rock.
Rock picker.....	Creighton Mine, Ont.....	" 21	19	Struck by falling pole.
<i>Coal mining:</i>				
Miner.....	Drumheller, Alta.....	Oct. 11	29	Fall of coal.
Miner.....	New Aberdeen, N.S.....	" 11	.....	Ruptured when lifting coal.
Miner.....	Brule, Alta.....	" 11	34	Cave-in.
Pan man.....	Cumberland, B.C.....	" 19	62	Caught on shaft when putting belt on screen.
Miner.....	Halkirk, Alta.....	" 21	19	Crushed by falling earth.
Miner.....	Glacie Bay, N.S.....	" 30	.....	Fall of stone.
Driver.....	Lethbridge, Alta.....	Nov. 3	32	Horse ran away causing car to strike mine wall.
Loader.....	River Hebert, N.S.....	" 7	.....	Caught between roof and box.
Shipper.....	North Sydney, N.S.....	" 16	.....	Fell from car.
Rockman.....	Anyox, B.C.....	" 20	.....	Cave-in of bank.
Timberman.....	Glacie Bay, N.S.....	" 23	.....	Struck by runaway box.
Pumpman and fireboss (2).....	Nanaimo, B.C.....	" 24	43-34	Explosion of gas.
Miner.....	Cassidy, B.C.....	" 25	36	Asphyxiated by gas.
Miners (3).....	Coalspur, Alta.....	" 27	35-51	Overcome by gas in burning mine.
Miner.....	Canmore, Alta.....	" 27	37	Buried under corner of pillar which slipped off.
Miner.....	New Aberdeen, N.S.....	Dec. 8	.....	Struck by full box.
Miner.....	Canmore, Alta.....	" 8	32	Crushed—while riding on trip leaned too far backwards.
Miner.....	Canmore, Alta.....	" 8	36	Fall of coal.
Miner.....	Wayne, Alta.....	" 13	39	Fall of roof coal.
Miners (2).....	Drumheller, Alta.....	" 18	.....	Explosion; miner struck powder can with pick.
Chute loader.....	Mountain Park, Alta.....	" 19	28	Struck by ear.
Miner.....	Sydney, N.S.....	" 21	.....	Crushed between locomotive and sheathing.
Miner.....	Glacie Bay, N.S.....	" 23	25	Struck by coal box.
Miner on transport ship.....	Nanaimo, B.C.....	" 26	23	Crushed between ferry scow and barge.
Miner.....	Dominion, N.S.....	" 26	.....	Fall of coal.
<i>Non-metallic mineral mining and quarrying:</i>				
Miner.....	Vimy Ridge, Que.....	Oct. 5	32	Fall of rock in open cast pit.
Cobber.....	Thetford Mines, Que.....	" 23	37	Fall of rock in open cast pit.
Miners (4).....	East Broughton, Que.....	" 24	42-25	Fall of rock in open cast pit.
Labourer at gravel pit.....	Britannia Beach, B.C.....	" 14	43	Cave-in.
Labourer.....	St. Marc des Carrières, Que.....	" 14	34	Fall of rock in quarry.
Labourer at gravel pit.....	Near Lindsay, Ont.....	Nov. 23	.....	Cave-in.
Employee on gravel train.....	Russel, Man.....	" 22	25	Cars were driven down incline when coupling failed to act.
Labourer.....	Cliverton, Que.....	Dec. 1	40	Fall of over-hanging frozen ground.
Miner.....	Thetford Mines, Que.....	" 12	36	Fall of roof rock.
Labourer at gravel pit.....	North Onslow, Ont.....	" 28	34	Fall of frozen earth.
<i>Clay products and structural materials:</i>				
Labourer at brick yards.....	Milton, Ont.....	Nov. 15	.....	Explosion.
Labourer with stone company.....	Durham, Ont.....	" 28	50	Caught in shafting.
Employee at cement works.....	Belleville, Ont.....	" 28	20	Crushed under car; mitten caught when placing block.
Employee at brick yards.....	Delson, Que.....	Dec. 1	35	Struck by rail used to carry bricks to oven.
Employee at cement works.....	Port Colborne, Ont.....	" 23	29	Fall of stone.
<b>MANUFACTURING—</b>				
<i>Veg. table foods, drink and tobacco:</i>				
Bread delivery man.....	Delaware, Ont.....	Dec. 4	32	Truck overturned.
Bread delivery man.....	Port Credit, Ont.....	" 14	.....	Truck struck by train.

## FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1922—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—(Continued)</b>				
<i>Animal foods:</i>				
Foreman with fish company	Sault Ste. Marie, Ont....	Dec. 13	58	Drowned.
<i>Pulp, paper and paper goods:</i>				
Employee at paper mill.....	Merritton, Ont.....	Nov. 2	36	Asphyxiated in recovery tower when steam lane burst.
Employee at paper mill.....	Three Rivers, Que.....	Dec. 3	.....	Crushed—power was turned on while oiling machine.
<i>Raftman with paper company.....</i>				
Employee at paper mill.....	Lake Superior, Ont.....	" 13	.....	Drowned.
Employee at paper mill.....	Thorold, Ont.....	" 20	37	Slipped when getting on engine and caught between coal pile and car.
<i>Printing and publishing:</i>				
Elevatorman.....	Quebec, Que.....	Oct. 9	40	Fall of elevator; man mistook mechanic's orders.
<i>Wood products:</i>				
Carpenter at coopeage.....	Esquimaux, B.C.....	" 11	27	Struck by splinter of wood from planer.
Labourer at basket factory.	Grimsby, Ont.....	Nov. 7	.....	Crushed by log.
Machinist at piano factory..	Toronto, Ont.....	" 23	68	Cut hand in circular saw—infection.
Labourer at wood factory..	Longford Mills, Ont.....	" 28	40	Crushed by engine.
<i>Saw and planing mills:</i>				
Employee at sawmill.....	Hull, Que.....	Oct. 4	17	Caught in conveyor chain.
Teamster at sawmill.....	Exeter, Ont.....	" 17	58	Fell—stomach perforated.
Benchman.....	Toronto, Ont.....	" 18	73	Cut thumb—infection.
Employee at sawmill.....	Nestorville, Ont.....	" 28	.....	Struck by splinter from saw.
Employee at planing mill.....	Port Arthur, Ont.....	" 23	.....	Caught in machinery.
Employee at sawmill.....	Quebec, Que.....	Nov. 7	.....	Caught in belt.
Labourer at sawmill.....	Portland, Ont.....	" 11	80	Caught in shafting.
Splitter at sawmill.....	Hampton, N.B.....	" 25	15	Caught in machinery and pulled against saw.
Employee at sawmill.....	Antigonish, N.S.....	Dec. 6	19	Clothes caught in set screw and wound around shaft.
<i>Iron, steel and products:</i>				
Railway shop fireman.....	Edmonton, Alta.....	Oct. 5	24	Run over by train.
Railway repairman.....	Fort William, Ont.....	" 31	62	Run over by cars.
Employee at steel works.....	Sydney, N.S.....	Nov. 28	30	Crushed when steel billet fell from crane.
Labourer at iron works.....	London, Ont.....	" 30	73	Crushed by drum.
Car repairer.....	Montreal, Que.....	Dec. 7	.....	Struck by swinging door when repairing car.
Blacksmith at steel works...	Milton, Ont.....	" 6	46	Strain.
Car inspector.....	Montrose, Ont.....	" 9	.....	Run over when crawling under car.
Structural iron worker.....	Edmonton, Alta.....	" 18	40	While catching hot rivets was struck by one in face.
Employee of steel plant.....	Sydney, N.S.....	" 22	18	Crushed between car and building.
Labourer at metal factory..	Welland, Ont.....	" 28	37	Electrocuted while handling switches in transformer room.
<i>Non-ferrous metal products:</i>				
Labourer at oil refinery.....	Sarnia, Ont.....	Nov. 2	29	Caught in crane.
<i>Chemical and allied products:</i>				
Switchman at creosote plant	Trenton, Ont.....	Nov. 16	30	Thrown from car when it left track.
Employee at cyanamid plant	Niagara Falls, Ont.....	" 20	.....	Caught in conveyor.
Employee at paint works.....	Waterville, Que.....	Dec. 20	37	Fell into tank of boiling water.
<i>Miscellaneous manufacturing:</i>				
Factory employee.....	Sherbrooke, Que.....	Nov. 9	.....	Clothing caught in wheel.
<b>CONSTRUCTION—</b>				
<i>Building and structures:</i>				
Mason.....	Kings Co., N.B.....	Oct. 2	39	Fell from staging.
Workman.....	Montreal, Que.....	" 5	44	Fell from scaffold when beam broke.
Labourer.....	Bryden, Ont.....	" 12	34	Struck on head by pole.
Roofer.....	Brantford, Ont.....	" 16	58	Fell from scaffold.
Labourer with contractor.....	Toronto, Ont.....	" 14	45	Hoisting apparatus gave way while lifting load.
Wrecker.....	Quebec, Que.....	" 19	65	Crushed when roof fell.
Carpenter.....	Chippawa, Ont.....	" 19	47	Fall.
Carpenter.....	Lacombe, Alta.....	" 26	30	Fell from scaffold.
Workman raising barn.....	Beckwith township, Ont.	" 26	37	Struck by falling timber.
Foreman with contractor.....	Kingston, Ont.....	" 28	52	Struck by derrick.
Workman putting on windows.	Montreal, Que.....	" 31	58	Overbalanced and fell.
Mechanic's helper installing elevator.	Winnipeg, Man.....	Nov. 3	38	Struck by object which fell from crate when hoisting.
Stationary engineer.....	Jasper, Alta.....	" 4	30	Scalded when valve bonnet burst.
Carpenter.....	Barrie, Ont.....	" 11	.....	Ladder slipped causing fall.

## FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1922—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>CONSTRUCTION—(Continued)</b>				
<i>Building and structures—(Continued):</i>				
Carpenter.....	Great Falls, Man.....	Nov. 24	30	Hit by bucket and fell down hoistway
Roofer.....	Hamilton, Ont.....	Dec. 6	54	Fell off roof.
Labourer.....	Quebec, Que.....	" 6	30	Fell from fourteenth storey of building.
Labourer.....	Charlottetown, P.E.I....	" 6	35	Struck by falling trestle.
Iron worker.....	Toronto, Ont.....	" 20	.....	Fell from scaffold when staging gave way.
<i>Railway construction:</i>				
Labourer with contractor...	Thorold, Ont.....	Oct. 21	26	Struck by train.
Workman.....	Kingston, Ont.....	" 28	.....	Chain on derrick broke letting loaded box fall.
Labourer.....	Near Strathmore, Que....	Nov. 4	18	Struck by train.
Labourer.....	Fort William, Ont.....	" 9	58	Cut hand—infection.
Bridgeman.....	Ruel, Ont.....	" 9	.....	Struck by loose rail thrown up by gravel spreader.
Labourer.....	Niagara Falls, Ont.....	Dec. 16	.....	Fell off scaffold.
<i>Shipbuilding:</i>				
Driller at shipyard.....	Kingston, Ont.....	" 28	.....	Fell off ladder.
<i>Miscellaneous construction:</i>				
Sewer digger.....	Fort Garry, Man.....	Oct. 27	84	Struck by train at intersection of sewer work and railway.
Workman connecting pipes in trench.....	Johnville, Que.....	Nov. 16	38	Cave-in.
Labourer.....	Haliburton, Ont.....	Dec. 1	53	Struck by tree.
Road maker.....	Sydney Mines, N.S.....	" 6	.....	Fall of stone.
Dock hand.....	Queenston, Ont.....	" 7	18	Drowned.
Watchman.....	Great Falls, Man.....	" 8	42	Fell from trestle.
Bridgeman.....	Phillipsburg, Ont.....	" 9	48	Caught in shafting.
Fireman.....	Shelbourne, Ont.....	" 14	.....	Scalded when steam roller upset.
Bridgeman.....	New Hamburg, Ont.....	" 14	.....	Caught in belt of engine.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam railways:</i>				
Trainman.....	Mtl. 103, La Rivière Sd., Man.....	Oct. 1	35	Fell between cars.
Conductor.....	Fort William, Ont.....	" 4	.....	Run over; fell when alighting.
Labourer.....	Bliss, Alta.....	" 4	.....	Deraillment of speeder.
Labourer.....	Port Arthur, Ont.....	" 11	37	Struck on head by coal.
Watchman.....	Winch, B.C.....	" 6	32	Struck by train while sleeping on speeder.
Assistant to signal inspector	Meadow Brook, N.B.....	" 11	30	Thrown from motor car.
Yardman.....	Anglia, Sask.....	" 13	.....	Struck by falling timber from pile.
Engineer.....	Broadview, Sask.....	" 19	40	Run over by engine.
Sectionman.....	Near Kaministiquia Sd., Ont.....	" 18	40	Struck by train.
Sectionman.....	M. 312, E.D. & B.C. Ry., Alta.....	" 22	21	Hand car struck by train.
Section foreman.....	Bonar, Alta.....	" 22	.....	Hand car struck by train.
Brakeman.....	Cochrane, Ont.....	" 24	36	Run over. Foot caught in guard rail.
Conductor.....	Harrowsmith, Ont.....	" 27	56	Struck by car standing foul.
Brakeman.....	Windsor, Ont.....	Nov. 2	31	Struck by backing engine.
Brakeman.....	Wateomb, Ont.....	" 8	29	Deraillment.
Brakeman.....	Niagara Falls, Ont.....	" 30	52	Crushed between cars.
Trainman.....	North Co., N.B.....	" 9	50	Run over by train.
Trainman.....	Winnipeg, Man.....	" 9	.....	Run over.
Gateman.....	Toronto, Ont.....	" 6	62	Arm bruised (no particulars).
Conductor.....	Smith Falls, Ont.....	" 8	40	Rear end collision.
Yardman.....	Winnipeg, Man.....	" 9	30	Fell between moving cars.
Sectionman.....	Chatham, N.B.....	" 9	.....	Struck by train.
Fireman.....	North Bay, Ont.....	" 15	32	Head-on collision.
Trainman.....	Souris, Man.....	" 23	36	Bruises in pelvic region (no particulars).
Labourer.....	Bashaw, Alta.....	Dec. 3	40	Thrown from speeder.
Pumpman.....	Peterbell, Ont.....	" 4	21	Fell off train.
Sectionmen (2).....	Near Carberry, Man.....	" 5	49-44	Struck by train while removing hand car at curve.
Sectionman.....	Fort William, Ont.....	" 6	25	Struck by engine.
Sectionman.....	Fort Rouge, Man.....	" 12	36	Run over by train.
Fireman.....	Streetville, Ont.....	" 6	.....	Run over by engine.
Engineer and fireman (2).....	Near Palliser, B.C.....	" 18	37-34	Deraillment due to broken rail.
Yardman.....	Niagara Falls, Ont.....	" 10	29	Struck by switching train.
Switchman.....	Sydney, N.S.....	" 16	47	Fell backwards from car.
Conductor.....	Montreal, Que.....	" 17	.....	Crushed beneath train.
Brakeman.....	Newcastle, N.B.....	" 24	50	Thrown under car when releasing brakes.
Trainman.....	Ignace, Ont.....	" 21	23	Crushed between couplers.
Brakeman.....	Flaxcombe, Sask.....	" 21	.....	Crushed between cars.

## FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1922—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>TRANSPORTATION AND PUBLIC UTILITIES—(Continued)</b>				
<i>Street railways:</i>				
Labourer.....	Toronto, Ont.....	Nov. 12	42	Struck by car.
Conductor.....	London, Ont.....	Dec. 13	.....	Slipped when adjusting trolley pole.
Conductor.....	Montreal, Que.....	" 28	42	Crushed between wall and rear of car.
<i>Water transportation:</i>				
Long horeman.....	Montreal, Que.....	Oct. 4	.....	Fall.
Long horeman.....	Montreal, Que.....	" 13	26	Caught between shunting cars at wharf.
Longshoreman.....	Vancouver, B.C.....	" 21	40	Packing cases fell from deck while being shifted.
Deck hand.....	Sau't Ste. Marie, Ont....	" 4	.....	Drowned.
Stevadore.....	Sydney, N.S.....	" 5	.....	Fell down hatchway.
Longshoreman.....	Montreal, Que.....	Nov. 4	35	Struck by shovel which glanced from post of barge.
Engineer on steamer.....	Montreal, Que.....	" 11	57	Fell from dock to deck of ship.
Deck hand.....	Verdun, Que.....	" 11	.....	Drowned while painting boat.
Employee on dredge.....	Goderich, Ont.....	" 18	22	Drowned.
Steamer's crew (11).....	Lake Superior.....	Dec. 1	.....	Drowned when steamer sank.
Labourer.....	Charlottetown, P.E.I.....	" 6	35	Struck by falling trestle.
Employee on tug.....	Gaspe Coast, N.S.....	" 8	.....	Hit by plank.
Sailor on steamer.....	Lake Superior.....	" 11	.....	Drowned.
Seaman.....	New Westminster, B.C....	" 17	.....	Fell from ladder used as gang plank—drowned.
Deck hand.....	Vancouver, B.C.....	" 20	41	Fell from ladder used as gang plank—drowned.
Employee on tug.....	Gaspe Coast, Que.....	" 8	.....	Struck by plank when wave broke over tug.
Employee on schooner.....	Between Lunenburg, N.S. and City Island, N.Y....	" 20	18	Washed overboard—drowned.
<i>Storage and local transportation:</i>				
Bucket man at coal dock....	Prince Rupert, B.C.....	Oct. 1	56	Wharf collapsed—drowned.
Driver.....	Near Parkbeg, Sask.....	" 2	.....	Thrown from wagon when team bolted.
Truck driver.....	Mallorytown, Ont.....	" 7	28	Gas explosion—burned.
Teamster.....	Lethbridge, Alta.....	" 8	42	Kicked by a horse.
Labourer at elevator.....	Port Arthur, Ont.....	" 26	36	Caught between cars.
Labourer.....	Vancouver, B.C.....	" 16	38	Fell into open chute—crushed by revolving grain buckets.
Truck driver.....	Quebec, Que.....	" 25	27	Caught between vehicle and top of gateway.
Employee at elevator.....	Transcona, Man.....	Nov. 8	.....	Crushed between box cars.
Express and mail delivery man.....	Edmonton, Alta.....	" 10	.....	Car turned over.
Chauffeur.....	Wellington, N.S.....	" 23	.....	Crushed between wall and car when cranking engine.
Driver.....	Hastings, Ont.....	" 27	.....	Thrown from load when horses bolted.
Elevator employee.....	Wainwright, Alta.....	Dec. 4	27	Fell while unloading grain wagon.
Teamster.....	Truro, N.S.....	" 27	.....	Struck by locomotive.
Truck driver.....	Stratford, Ont.....	" 30	.....	Engine struck truck.
<i>Public utilities, n.e.s.:</i>				
Pipe fitter with power commission.....	Queenston, Ont.....	Oct. 20	35	Fell from transformer.
Water works employee.....	Selkirk, Man.....	" 5	.....	Electrocuted; making electrical connections.
Fireman with power commission.....	Toronto, Ont.....	" 29	33	Electrocuted; touched wire while on pole.
Employee with harbour commission.....	Montreal, Que.....	" 22	.....	Burned by electric switch at power house.
Electrician with municipal commission.....	London, Ont.....	Nov. 3	.....	Electrocuted.
Sweeper with harbour commission.....	Montreal, Que.....	" 20	.....	Struck by shunting train.
Employee of power commission.....	Sheet Harbour, N.S.....	" 25	.....	When making soundings boat capsized.
Power house engineer.....	Coleman, Alta.....	" 30	29	Burned in fire at power house.
<b>TRADE—</b>				
<i>Rail:</i>				
Labourer with coal company	Port Colborne, Ont.....	Nov. 10	.....	Crushed by coal.
Teamster with coal company	Toronto, Ont.....	Dec. 20	40	Caught in machine.
<i>Warehousing:</i>				
Employee at warehouse.....	Vancouver, B.C.....	Nov. 25	21	Caught beneath floor as elevator ascended.
<b>SERVICE—</b>				
<i>Public and municipal employment:</i>				
Constable.....	Vancouver, B.C.....	Oct. 9	23	Shot when attempting to make an arrest.

## FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1922—(Continued).

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>SERVICE—(Continued)</b>				
<i>Public and municipal employment—(Continued)</i>				
Constable.....	Fauquier, Ont.....	Oct. 24	.....	Stumbled over stone in front of train
Fire ranger.....	Shawinigan township, Que. ....	" 26	.....	Struck by burning tree while digging a ditch.
Fireman.....	Edmonton, Alta.....	Dec. 16	37	Collision between fire apparatus and street car.
Civic employee.....	Quebec, Que.....	" 27	69	Heart failure while removing snow.
Constable.....	Thorold, Ont.....	" 17	.....	Shot.
<b>Personal:</b>				
Window cleaner.....	Toronto, Ont.....	Oct. 19	20	Fell from window sill when screen broke.
Window cleaner.....	Regina, Sask.....	" 24	30	Fell from edge of window.
Window cleaner.....	Vancouver, B.C.....	Dec. 26	.....	Fell from hotel window through glass canopy.
<b>MISCELLANEOUS—</b>				
Workman.....	Lower Caledonia, N.S.....	Oct. 6	61	Struck by falling tree.
Workman.....	Amherst, N.S.....	" 16	(Aged)	Over exertion while loading wood.
Inspector.....	Regina, Sask.....	" 27	42	Automobile overturned.
Workman.....	Batiscan, Que.....	" 27	52	Kicked by horse.
Workman.....	Union Bay, B.O.....	" 28	57	Caught in revolving washer.
Elevator operator.....	Pitman, Sask.....	Nov. 4	30	Clothing caught in machinery.
Labourer.....	North Vancouver, B.C.....	" 8	37	Fell when climbing on crane and crushed by its wheels.
Labourer.....	Cradwell, Man.....	" 22	.....	Struck by train.
Workman.....	Old Barns, N.S.....	" 27	21	Crushed by load of grain doors which upset.
Rigging man.....	McNabb Creek, B.C.....	Nov. 18	26	Tight line gave way letting bicycle drop.
Workman at bank.....	St. John, N.B.....	Dec. 7	48	Safe fell when being hoisted.
Helper.....	Montreal, Que.....	" 26	.....	Fell in shaft of hoist.

## SUPPLEMENTARY LIST OF ACCIDENTS OCCURRING IN 1922 PREVIOUS TO THE LAST QUARTER.

Trade or Industry	Locality	Date	Age	Cause of Fatality
Labourer.....	North Vancouver, B.C.....	Feb. 6	44	Crushed against partition when board caught in carriage.
Labourer.....	Kisameon, B.C.....	May 29	33	Fell from roof.
Labourer.....	Rossland, B.C.....	June 19	57	Fell when stepping over rail which was being raised.
Miner.....	Queens Co., N.B.....	July 2	27	Fell down shaft.
Stevedore.....	Victoria, B.C.....	" 10	27	Fell when washing deck—erysipelas.
Logger.....	Campbell River, B.C.....	" 29	55	Fell when foot caught—infection.
Woodsmen.....	Ingramport, N.S.....	Aug. 1	65	Log slipped when loading.
Teamster with coal company	Toronto, Ont.....	" 1	.....	Hernia.
Blacksmith.....	Winnipeg, Man.....	" 5	60	Contusion of toe; amputation and infection.
Trench digger.....	Fredericton, N.B.....	" 10	40	Meningitis following injury when wall caved in on trench (died Nov. 25).
Blacksmith.....	Fernie, B.C.....	" 19	48	Struck by log from chute.
Fisherman.....	Morpeth, Ont.....	" 26	41	Struck by tree.
Shipper with confectionery plant.....	Winnipeg, Man.....	" 24	54	Leg bruised—infection (died Oct. 16).
Labourer.....	Port Arthur, Ont.....	Sept. 5	44	Back injured by timber.
Cooper.....	Winnipeg, Man.....	" 11	32	Cut thumb—infection (died Dec. 29).
Bucker.....	Chancellor Channel, B.C.....	" 15	50	Struck by logs from main line which came loose.
Woodsmen.....	Nesto, Ont.....	" 18	21	Cut leg—infection.
Sectionman.....	Alert Bay, B.C.....	" 17	52	Fell from footboard of locomotive.
Labourer.....	North Co., N.B.....	" 19	66	Struck head against beam.
Laundry worker.....	Toronto, Ont.....	" 22	26	Back strained.
Woodsmen.....	Near Pembroke, Ont.....	" —	.....	Thrown from wagon—pneumonia (died Oct. 23).
Constable.....	Coleman, Alta.....	" 21	.....	Shot by bootlegger.
Machine feeder.....	The Pas, Man.....	" 23	27	Lumber rebounded from rip-saw (died Oct. 30).

## IMMIGRATION TO CANADA DURING FOURTH QUARTER OF 1922

THE following table compiled from information furnished by the Department of Immigration and Colonization gives some details respecting the total number of immigrants into Canada during the fourth quarter of 1922. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1921 are also given.

The table on page 218 gives the nationality, sex, occupation and destination of all immigrants who entered

Canada during the quarter under review.

IMMIGRATION TO CANADA, DURING THE FOURTH QUARTER OF 1922.

Period 1922	Great Britain and Ireland	U.S.A.	Other Coun- tries	Totals
October.....	3,212	1,741	1,367	6,320
November.....	1,709	1,259	1,263	4,231
December.....	1,263	942	1,160	3,365
Fourth Quarter, 1922.....	6,184	3,942	3,790	13,916
Third Quarter, 1922.....	10,646	6,615	3,978	21,239
Fourth Quarter, 1921.....	4,217	5,191	4,575	13,983

## RECENT LEGAL DECISIONS AFFECTING LABOUR.

THE two legal decisions which are summarized below deal respectively with a case respecting picketing which

arose out of a strike at Montreal, Que., and an action for wrongful dismissal in Ontario.

### Injunction against picketing sustained on appeal.

In the issue of the LABOUR GAZETTE for January, 1922, on page 59, the text of a legal decision delivered in the Superior Court of Quebec was given in which an injunction was granted on behalf of an employer against picketing. The International Ladies Garment Workers' Union, which was the defendant in the action, entered an appeal in the Court of King's Bench.

The case arose out of a strike, in the course of which it was alleged that the strikers used unlawful methods with the object of preventing the employers' workers from continuing their occupation. The judgment of the Court of King's Bench was in part as follows:

"Members of the Union had the right to abstain from working in respondent's establishment if they chose to do so, and upon the strike being declared the two employees of respondent who were members of the Union did so elect and volun-

tarily ceased work, but others who desired to remain had the right to do so, and any interference with the latter's right to do so or with respondent's right to engage them to do so was illegal and unjustifiable. . . In the present case, there is evidence of direct interference, obstruction, intimidation and assault. . . While peaceful persuasion is permissible, militant methods amounting to intimidation and threats of violence followed by acts of violence are clearly illegal and may be restrained, and the person whose liberty of action is so interfered with protected. . . If members of labour unions prefer idleness to employment, that is their affair and so long as they do not attempt to interfere with men who are willing to work or with the business of employers who are willing to employ such as desire to work, no one is likely to interfere with them. When, however, they take the position not only that they will not work themselves but

will not permit others to work or permit employers of labour to employ such others, the situation becomes different. The labour union oversteps its rights and the law is violated. Action then becomes necessary for the protection of life, property and liberty of action. The learned trial judge in his notes of judgment points out the difference between the English Act of 1875 and its amendments and article 501 of our Criminal Code, that under the English Act there is a proviso not found in the Criminal Code that attending merely to obtain or communicate information or peacefully persuading any person to work or abstain from working shall not be deemed watching or besetting. The acts of appellant as disclosed by the evidence constitute not only breaches of the peace and violation of the Criminal law, but also constitute a common law nuisance which may be restrained by injunction. . . . It was. . . urged that the terms of the restraining order were

too broad in that all picketing was restrained, I should say that the trial judge used the word 'picketing' in the sense of watching or besetting or, as Chief Justice Taft said in the American Steel Foundries case: 'The name "picket" indicates a militant purpose inconsistent with peaceful persuasion.' The restraining order enjoins the appellants from molesting or interfering with respondent and from in any way picketing in front of or at his place of business or watching his place of business or the residence of his employees or from following them with a view of intimidating the latter from entering or remaining in respondent's employ. Appellants cannot in any way be misled by the terms of this restraining order."

The judgment of the Superior Court was maintained and the appeal dismissed.

(*Quebec—International Ladies' Garment Workers Union vs. Rother.*)

**An employee cannot be dismissed for insolence if provoked by employer.**

A cheesemaker brought an action in the High Court of Ontario against his employer on the ground of unlawful dismissal. The opinion of the Court in a written decision was in part as follows: "The main defence was that the plaintiff was insolent in his language to the directors; and another defence was that he did not make good cheese. The real basis of the chief defence was that the plaintiff and the president of the defendant company, in several encounters over the business of the factory, were heard 'chewing the rag,' which meant that they were indulging in a free exchange of hubristic epithets, with mutual suggestion as to ignobility of natal origin and pungent asservation of mental inferiority. But indulgence in this verbal pastime between employer and employee, on equal terms socially and commercially, as between man and man, with give and take, and covering business affairs, is not sufficient ground for the breaking of the contract under which a cheesemaker as employed. . . . The insolence of the employee is not sufficient where he has been irritated by the conduct of the employer. In order

to justify dismissal for insolent and offensive language it must be shown that what was said was incompatible with continuance of the relationship. Provocation by the master will sometimes render excusable words which, apart from that element, would constitute a good ground of dismissal. . . . An employee must be obedient to the orders of his employer, but it is the spirit and not the letter which governs, and it is not wilful disobedience if business judgment is used, notwithstanding that instructions are disobeyed. . . . The allegations of the defendant company as to the making of bad cheese, insanitary treatment, and disobedience, were not sustained by the evidence. The plaintiff was dismissed in the middle of the cheese-season, and it had not been shown that he should have been able to obtain another situation. He should be compensated in damages for the breach of the contract by having what he would probably have earned during the remainder of the season and or his loss of dwelling privileges—assessed in all at \$1,200."

(*Ontario—Latta v. Acme Cheese Company.*)

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

This issue  
in brief.

In addition to the regular monthly articles this issue of the LABOUR GAZETTE contains a summary of the labour legislation enacted by the Dominion and provincial parliaments during 1922; a summary of recent labour legislation in the United States, a review of trade disputes in Canada during 1922, and a review of industrial accidents in Canada during 1922. Among other articles of industrial interest, it contains the text of an important legal decision of the Judicial Committee of the Privy Council respecting the employment of Orientals in British Columbia lumber camps. This issue also contains an announcement of a Dominion-Provincial conference which will be held next summer for the consideration of matters arising out of the International Labour Conferences.

At the beginning of February the percentage of unemployment among members of trade unions was 7.8 as compared with 6.1 at the beginning of January, and with 13.9 at the beginning of February, 1922. The employment situation at the close of January as reflected in reports from employers showed substantial reaction from the severe losses of the previous month, increased activity being reported in the manufacturing industries, and in logging and coal mining, but in the con-

struction, transportation and trade groups there were large contractions. The offices of the Employment Service of Canada reported a very marked increase in business during January, compared with the previous month.

The average cost of the weekly family budget of 29 staple foods was \$10.53 at the beginning of February as compared with \$10.52 at the beginning of January, \$10.61 for February, 1922, \$14.08 for February, 1921, \$16.92 for June, 1920 (the highest point reached), and \$7.75 for February, 1914. In wholesale prices the index number stood at 224.3 for February, as compared with 223.0 for January; 229.5 for February, 1922; 270.1 for February, 1921; 356.6 for May, 1920 (the highest point reached); and 136.6 for February, 1914.

The time loss due to industrial disputes during February was less than during January, and also less than in February, 1922. There were in existence during the month 17 disputes involving about 4,939 employees with an estimated time loss of 51,258 working days. The estimated time loss in the previous month was 54,545 working days. Two new disputes commenced during February. Both of the new disputes were terminated during the month, and in three others conditions

ceased to be affected, leaving 12 disputes involving 1,354 employees on record at the beginning of March.

**Proceedings under the Industrial Disputes Investigation Act.** During February no reports of Boards of Conciliation and Investigation were received by the Department. One application for the establishment of a Board was received, but no Board was constituted during the month.

**Jottings.** Conventions of the following international and Canadian organizations will be held during the months of April and May:

Amalgamated Association of Iron, Steel and Tin Workers of North America, at Warren, Ohio, on April 2 to 17.

Brotherhood of Dominion Express Employees, at Toronto, Ont., on April 16.

United Cloth Hat and Cap Makers, of North America, at New York, N.Y., on May 1.

International Longshoremen's Association, at Boston, Mass., on May 14 to 21.

American Federation of Musicians, at St. Louis, Mo., on May 14 to 21.

Boot and Shoe Workers' Union, at Montreal, Que., on May 18.

In consequence of his appointment as Minister of Labour in the British Government, the Rt. Hon. Sir C. A. Montague Barlow has been obliged to relinquish his duties as representative of the British Government on the Governing Body of the International Labour Office. Major A. B. Boyd-Carpenter, M.P., Parliamentary Secretary of the Ministry of Labour, has been designated as the new representative of the British Government on the Governing Body.

A delegation from the Canadian National Safety League composed of Messrs. Tom Moore, W. C. Coulter, Tom Stevenson, and R. B. Morley, members of the executive of the League, and Mr. J. F. H. Wyse, general manager, waited on members of the Dominion Government, and requested assistance for carrying on the work of the League. The Minister of Finance promised to take their request into consideration. Subsequently the sum of \$25,000 was placed in the estimates for 1923-24 for the benefit of the League.

The executive board of the Ontario Provincial Council of Carpenters recently passed a resolution endorsing the principle of the apprenticeship system and declaring their willingness to appoint a committee to meet a like committee of the Association of Canadian Building and Construction Industries to draw up an apprenticeship system that will be mutually satisfactory.

Since the Ontario Mothers' Allowances Act came into force on October 1, 1920, 1,500 ineligible cases have been refused allowances by the Central Board. No record has been kept of the number of applications made to local Boards.

The British Columbia Government recently appointed Mrs. W. Mahon, President of the Vancouver local branch of the United Garment Workers of America, as inspector under the Factories and Minimum Wage Acts. Her chief duties will be the inspection of factories where women are employed and the examination of payrolls of all establishments covered by the Minimum Wage Act.

Loans amounting to \$170,691 were made during 1922 by the Alberta government to Normal school students, the number of students receiving loans being 661 out of a total of 1,546 first and second term students attending the school. Loans were first made to

students in 1919, when \$28,971 was advanced by the Province, 145 students taking advantage of the arrangement out of a total attendance at the schools of 600 in that year. A steady increase has since then been shown both in the total attendance and in the number of students in receipt of loans.

The Provincial Board of Health of Ontario has issued regulations declaring certain diseases to be communicable and requiring notification of such diseases to the medical health officer or secretary of the local board of health. Among these diseases are included anthrax and actinomycosis (lumpy jaw), to the risk of which certain employees are especially exposed.

A committee was recently appointed by the Council of the Calgary Board of Trade to formulate certain objections taken by the Council to the new Minimum Wage Act of Alberta, and to bring to the attention of the provincial government what in their opinion would be the probable effects of the Act. The Council held that the Act would throw many girls out of work, and that the time was inopportune for the resulting increase in wages, when the figures from the *Labour Gazette* show a decrease in the cost of living during the past year.

Four agricultural summer schools for teachers were in operation in Ontario during 1922, situated at Guelph, Whitby, Monteith and Kemptville. These schools were attended by 118 male and 568 female teachers. The total cost of these schools was \$43,861.

It is announced by the International Typographical Union that the United States Bureau of Mines is to make examinations in six commercial printing plants in Pittsburg and Washington, to determine the metallic contents of "printers' list", a substance which collects in type boxes and forms. The results of the examination will be submitted to Dr. Frederick L. Hoffman, in charge of the Union's nation-wide health survey in the printing trades. It

is stated that there is a prevalence of dust phthisis among printers.

At the joint meeting of bituminous coal operators and the United Mine Workers of America which took place in New York in January, a resolution was passed, after the signing of the wage contracts for the current year, that the joint sub-committee of operators and miners should meet on January 8, 1924, to prepare a new agreement in advance of the expiration of the current one on April 1, 1924.

The economic loss caused by industrial accidents in the United States is estimated at \$1,010,500,000 a year, according to a paper by Mr. John L. Train, secretary and general manager of the Utica Mutual Life Insurance Company, Utica, N.Y., read before the Sixth Annual Industrial Conference of the State of New York in November last. The incurred workmen's compensation losses (exclusive of cost of disbursing benefits, of investigations or adjustment of claims, or outside benefits), for the year ending June 30, 1921, of all insurance carriers and self insurers in New York State amounted to \$24,136,000 and the medical cost including hospital to \$5,007,000, or a total of \$29,143,000. These figures were given as the result of investigations and studies of statisticians and actuaries.

The Japanese Government has drafted for submission to parliament the following bills on labour matters: (1) Bill for the amendment of the Factory Act; (2) Bill providing for the separate financial administration of the Health Insurance Act; (3) The Insurance of Seamen Bill; (4) Bill for the amendment of the Seamen's Act; (5) Bill for the application of the decisions of the International Labour Conference (League of Nations) regarding agricultural labour.

A number of labour organizations in Italy in recent months have voluntarily contributed to the funds of the State a portion of their wages by working

overtime, and transmitting to the government a part of the whole of their extra wages so earned.

The Italian Government has decided to abolish the National Office for Employment Exchanges and Unemployment. The administration of compulsory unemployment insurance will be transferred to the National Social Insurance Fund, the general unemployment insurance work will be transferred to the General Directorate of Social Welfare, and employment exchange work will be transferred to the General Directorate of Labour.

Labour  
campaign  
against war.

The Executive Council of the Trades and Labour Congress of Canada recently issued

a bulletin with reference to a campaign against militarism, the text of which is as follows:

"The Executive Council of the Trades and Labour Congress of Canada, at its last meeting, had before it a request that Canada take an active part in the campaign being organized by the International Federation of Trade Unions against militarism and for disarmament, and appealing for assistance from the Canadian workers for the raising of an anti-war fund. The proposal submitted by the International Federation of Trade Unions, briefly, is as follows:—

1. Anti-war stamps to be issued through the national trade union centre of each country which would be responsible to the international fund for the full value of all such stamps.

2. Posters and pamphlets to be prepared for distribution and other measures initiated from time to time to energetically carry on international anti-war propaganda throughout the world.

The Executive Council of the Trades and Labour Congress of Canada endorsed this proposal, but realized the

futility of committing the Congress to participate in this campaign unless the support of its affiliated membership is assured.

Secretaries of all affiliated local unions, trades and labour councils and federations of labour are therefore asked to bring the following proposals to the attention of their respective organizations:—

1. That the value of the stamp be fixed at 5c. These to be used by the various organizations as stickers on the backs of envelopes containing their official correspondence, etc. This would keep the international anti-war propaganda constantly to the front.

2. Affiliated organizations endorsing this proposal to forward to the Trades and Labour Congress of Canada their order for the number of stamps they are willing to purchase to start this fund and enclose therewith money order or cheque covering the value of the number of stamps ordered at 5c each.

3. The Trades and Labour Congress of Canada will undertake forwarding the orders received to the International Federation of Trade Unions and will also arrange for the distribution of posters and other international anti-war literature received in return.

It was further decided that if the amount received were not such as to warrant participation in this international campaign the money received would be returned to those sending same.

The workers of Canada should not be behind those of other countries in actively interesting themselves in this matter, and it is urged that these proposals be brought immediately to the attention of all organized workers, as resolutions alone will not accomplish the desired object of preventing future wars. Education and still more education is necessary before success can be achieved."

**Fifth Session  
International  
Labour  
Conference.**

The Fifth Session of the International Labour Conference (League of Nations), will be opened in Geneva, Switzerland, on October 18, 1923. The Agenda of the Conference, as determined by the Governing Body, will include the following items:— (1) Development of facilities for the utilization of workers' leisure. (2) General principles for the organization of factory inspection. (3) Equality of treatment for national and foreign workers as regards workmen's compensation for accidents. (4) Weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used.

Two supplementary questions have been proposed for inclusion in the Agenda, namely, the question of *night work in bakeries*, and the question of the *disinfection from anthrax of wool, hair, bones, horns and hoofs*. The inclusion of these subjects is, however, subject to the further approval of the Governing Body.

**Ratification  
of draft  
conventions of  
International  
Labour  
Conference.**

The number of Draft Conventions and Recommendations of the International Labour Conference registered by the Secretary-General of the League of Nations up to February 1, 1923, was 65, in addition to 11 notifications of adherence, since the Washington Conference, to the Berne Convention on white phosphorous. In 13 further cases ratification had been authorized by the competent authority, but not yet communicated, and in 90 cases ratification had been recommended to the competent authority by the Government but approval has not yet been signified.

Information has been received that the State of Denmark has formally ratified the conventions fixing the minimum age for admission of children to

industrial employment and concerning the night work of young persons employed in industry, which were adopted at the First International Labour Conference (League of Nations) which met at Washington in October, 1919. The Esthonian Republic also has ratified the following conventions adopted by the conference at Washington: Concerning unemployment; concerning employment of women during the night; fixing the minimum age for admission of children to industrial employment; and concerning the night work of young persons employed in industry. On December 1, 1922, an Act was passed in Bulgaria ratifying all the Draft Conventions and Recommendations adopted at the second session of the International Labour Conference which met at Genoa in 1920.

**International  
Advisory  
Committee on  
Agriculture.**

Last year representatives of the International Labour Office and of the International Institute of Agriculture met at Geneva to discuss a basis of closer co-operation in order to avoid the possibility of overlapping and duplication. The appointment of an Advisory Committee on Agriculture was recommended to be composed of three members from each institution with power to invite any expert it might deem necessary to attend its meetings. The International Labour Office however had to defer action upon this recommendation pending the decision of the Permanent Court of International Justice as to the competence of the International Labour Organization to deal with agricultural questions. The Court having decided that the competence of the International Labour Organization extended to the international regulation of the conditions of labour of persons employed in agriculture, the governing body of the International Labour Office has appointed as its three representatives on the Advisory Committee its Chair-

man to represent the government group, Mr. Carlier (Belgium) to represent the employers and Mr. Leipart (Germany) to represent the workers.

**Negotiation of  
Public Service  
Agreements in  
Alberta.**

New agreements regarding wages and working conditions were effected recently, following negotiations between the Alberta Telephone Department and its employees throughout the province. Wages were reduced for the entire staff by amounts ranging from \$2.50 to \$5.00 per month, but only slight changes were made in other existing conditions. The negotiations were carried on by representatives of the parties concerned. In the case of the plant department a committee of six men appointed by the staff carried on the negotiations for the men. The department was represented by the plant superintendent, general superintendent, and the two plant chiefs in the Southern Division. In the case of the clerical employees a committee of five appointed by the staff from various parts of the province carried on negotiations for the staff, the department being represented by the heads of the various departments at Edmonton at the meeting held there. For the operators' wage schedules, meetings were held at Calgary, Lethbridge and Edmonton. At Edmonton, two employees who were elected by the staff represented the operators; the department was represented by the traffic superintendent and general superintendent. At Lethbridge, three of the staff represented the employees, who had been elected by the operators to represent the Lethbridge office and district. At Calgary, three employees who had been elected by the operators represented the Calgary operators. At each of the meetings the department was represented by the traffic superintendent and the general superintendent, and at Lethbridge and Calgary the traffic

chief of the respective districts also attended.

**Labour and  
Alberta  
Workmen's  
Compensation  
Act.**

A delegation from the Alberta Federation of Labour waited upon the provincial premier in February to request that the Workmen's Compensation Act be amended at the present session of the Alberta legislature by an upward revision of the scale of compensation now provided. Premier Greenfield replying to the delegation pointed out that the proposed increases would add large amounts to the charges which employers must meet under the existing scale, and that the government believed the present time unfavourable to add to the burdens of industry.

**Reserve funds  
of Ontario  
Workmen's  
Compensation  
Board.**

The amount of money standing in the reserve funds of the Ontario Workmen's Compensation Board at the close of each year since the commencement of the Act is shown in the table given below. The Disaster Reserve Fund was established under the Act to meet possible future liabilities; the Pension Fund is the capitalized value of pensions already awarded for accidents that have happened, its amount being calculated as sufficient to take care of existing pensions:—

	Disaster Fund	Pension Fund
End of 1915.....	15,910	243,042
" " 1916.....	23,486	1,046,810
" " 1917.....	46,752	1,992,296
" " 1918.....	76,637	3,155,986
" " 1919.....	102,888	4,339,387
" " 1920.....	151,639	7,105,300
" " 1921.....	218,616	8,620,546
" " 1922.....	269,390	9,966,980

**British  
Columbia  
coal mines  
regulations.**

New regulations under the British Columbia Coal Mines Regulation Act were issued during February, as follows: "(1) Every percussive air-drill used for the drilling of holes in coal shall be equipped with a water-jet or spray, or other appliance equally efficient, to prevent the escape of coal dust, and of a type approved by the Inspector of Mines. (2) The use of a compressed-air jet for forcibly removing accumulations of gas is strictly prohibited. (3) When an accumulation of gas is being removed, the official in charge shall see that no person or persons or lights of any description are allowed on the return side of the gas being removed, unless at a sufficient distance away to allow of a proper diffusion of the gas to a percentage lower than the withdrawal point having taken place before it reaches them. (4) The term "properly fenced", as quoted in General Rule No. 6, shall mean a fence four feet high built of not less than three boards, 1 by 6, spaced so as not to obstruct the ventilation, and nailed securely to posts, or where there are no posts on the ribs, then the ends of the boards shall be hitched into the coal at least three inches and securely wedged. (5) All places fenced off as required under the terms of General Rules and Special Rules shall have securely attached to such fence in a conspicuous place a danger signal properly worded, with the lettering at least 4 inches high; the lettering to be stencilled in white on a dark background both to be of endurable material that will not easily become obliterated."

**Workmen's  
Compensation  
in Saskatchewan.**

The premier of Saskatchewan recently suggested that employers and employees in the province should endeavour by conference to reach an agreement on the question of the amending of the Workmen's Compensation Act. The

existing Saskatchewan Act, like that of Quebec, requires injured employees to take action for compensation in the courts, and does not provide a workmen's compensation Board. The courts may award compensation for disability up to the full amount of the average earnings of the injured worker. About thirty employers in the province recently drafted a bill on the lines of the acts of Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta and British Columbia, all of which have established state funds administered by Boards, and fixed limits to the amount of compensation which may be awarded. This draft bill was presented to Premier Dunning as embodying the wishes of the employers. In his reply, the Premier pointed out that although the draft bill might be more satisfactory in many respects than the existing law, organized labour appeared to be unwilling to forego the possibility of receiving 100 per cent compensation for disability, and suggested that the parties concerned should reach an agreement as a basis for future legislative action.

**American  
participation  
in work of  
International  
Labour  
Conference.**

At a dinner given in Washington, D.C., to M. Albert Thomas, Director of the International Labour Office, on the conclusion of his recent visit to America, Mr. Julius H. Barnes, President of the Chamber of Commerce of the United States, stated that the Chamber was seriously considering the advisability of participating in the work of the International Labour Organization. Mr. Barnes' remarks on this occasion have been reported in part as follows—

"America has a considerable pride that its common standard of living is manifestly higher than that of any other industrial country. It desires to maintain and advance that standard, but as a surplus producing country selling in the export markets of the world there is a limit to the disparity

in the living conditions and wage scales which cannot be wholly overcome even by American resourcefulness and American adaptability to large scale production through mechanical aids. . . Manifestly, also, both in the interests of an increase in human standards and also in the self interest of national protection of our own standards, the processes of equalisation in wages and working conditions between ourselves and our industrial competitors should be one of levelling up their standards rather than levelling down our own. It is with this idea that the Chamber of Commerce of the United States is seriously considering the advisability of participation in the employers' section of the International Labour Office, so that we may understand and influence comparative world industrial relations."

Mr. Samuel Gompers, President of the American Federation of Labour, in a communication to the President declared that his organization would welcome the declaration of Mr. Barnes and would itself consider similar participation. The attitude of the American Federation of Labour had, indeed, been clearly defined at two conventions and was one of endorsement of the work of the International Labour Body.

International  
Federation of  
Trade Unions  
Delegation to  
visit America.

For some time past the Central Trade Union Organization of Mexico has been in communication with the International Federation of Trade Unions with a view to affiliation with that body. The Mexican organization has invited the International Federation of Trade Unions to send a deputation to Mexico with a view to bringing trade union organizations there into as close contact as possible with the International Federation and with the European trade union movement in general. The invitation of the Mexican organization has been accepted and a delegation com-

prising some of the best known trade union leaders in Europe has been appointed to undertake this mission. It is expected that the party will leave Europe about the middle of April and that in Mexico they will confer with representatives of the trade union organizations in all of the Latin-American countries of South America. It is understood that on the completion of their visit to Mexico the delegates will visit Canada and the United States for the purpose of entering into direct and personal contact with the Canadian trade union organization (the Trades and Labour Congress of Canada), which is already affiliated to the International Federation of Trade Unions, and also with the leaders of the American Federation of Labour.

The delegation of the International Federation of Trade Unions will consist of the following: Rt. Hon. J. H. Thomas (Great Britain); Léon Jouhaux (France); Corneille Mertens (Belgium); T. H. Leipart (Germany); A. d'Aragona (Italy); F. X. Caballera (Spain); Edo Fimmen (Holland); Frank Hodges (Great Britain); C. Ilg (Switzerland); Geo. Kapples (Germany); Tom Shaw (Great Britain).

Plan for  
prevention of  
industrial  
accidents.

A plan for the prevention of accidents in workshops was set forth by Mr. Arthur H. Young, manager of Industrial relations, International Harvester Company, Chicago, Ill., in a paper read before the Sixth Annual Industrial conference of the State of New York, held at Buffalo, N.Y., on November 23, 1922. The system proposed includes the following measures: (1) Physical examination of applicants for employment. (2) Periodic re-examination of employees. (3) Proper introduction of the new employee to his job, his foreman and fellow workers. (4) Safety committees. (5) Schools of instruction for safety committees. (6) Bulletin posting. (7) Interdepartment and interplant safety

contests. (8) Prizes for "no accident" periods. (9) Various trophies for new employees, etc. (10) Rule books for employees and foremen. (11) Drawings and specifications for standard equipment. (12) Lectures and movies. (13) Suggestion system. (14) Plant publication. (15) Foremen's training courses. (16) Special drive days, such as "good ladder days," "chain and cable inspection day," "good housekeeping week," etc. (17) Pay envelope inserts of slogans and sermonettes. (18) Safe clothing. (19) Safe practice inspection. (20) Safety museums and "bad tool morgues". (21) Fitting and specially grinding goggles. (22) Fire prevention. (23) Sanitation. (24) Ventilation. (25) Warning signs and lights. (26) English classes. (27) Fatigue studies.

**Co-operative labour banks in the United States.**

The Amalgamated Clothing Workers of America have established a bank in Chicago under the name of The Amalgamated Trust and Saving Bank of Chicago, and an application has been made for a charter for a similar bank to be established in New York city. The following principles for operating the bank have been adopted: (1) Members in good standing of the Amalgamated Clothing Workers of America only may own shares of stock. (2) Dividends are limited to ten (10) per cent on the capital stock and surplus actually invested by stockholders. (3) Surplus earnings may be distributed to depositors as the board of directors may from time to time decide. (4) Shares of stock to be transferred or sold must first be offered to the bank at a price equal to the book value (capital stock surplus and undivided profit) of the shares. In any event the shares may not be transferred to anyone not a member of the Amalgamated. (5) Price of shares—\$150—of which \$100 is the par value of

the capital stock and \$50 per share is paid toward the creation of a bank surplus fund. In connection with the Chicago bank, saving clubs have been formed in a number of tailor shops, the members of which agree to save a specified amount of money each week. One member brings the books of all the depositors to the bank. In January 600 new accounts were opened.

Steps have also been taken by seventeen local branches of the International Ladies' Garment Workers Union to establish a co-operative bank in New York city. It is to be organized with a capital of \$500,000. Dividends on the capital stock will be limited, and the surplus profits will be distributed among the depositors as additional interest on their deposits. Two other co-operative labour banks are about to be established in New York city, one by the Central Trades and Labour Council with a capitalization of \$2,000,000 and the other by the Brotherhood of Locomotive Engineers.

**Unemployment in Europe.**

Unemployment is reported to be still prevalent in various countries of Europe. In Italy the number of unemployed was stated to have been 354,238 on December 1, 1922, as compared with 321,011 in the previous month. In Austria there were estimated to have been 128,000 unemployed at the middle of January, with 250,000 on short time. In Checho-Slovakia a report for the General Federation of Manufacturers showed that in 84 textile factories, 18.7 per cent of the workers were idle and 59.7 per cent were working only 27 hours per week; in the glass industry only 12,000 out of 30,000 were employed; in the porcelain industry, 20 per cent were unemployed and 35 per cent were on short time. In cabinet making only 10 per cent were employed.

**Proposed Labour Treaty between France and Belgium.** It is reported that a convention affecting more than 250,000 Belgians working in France and a considerable number of French workers in Belgium is under negotiation between France and Belgium. The agreement provides that the wages paid to Belgian workers in France shall be equal to the wages paid to French workers employed on similar work, or, where foreign workers are employed, to the prevailing wage rates. French workers shall be entitled to the same treatment in Belgium. Complaints which require the intervention of the authorities shall be submitted to the government in question through the usual diplomatic channels. Workers belonging to one of the two countries and working in the territory of the other shall enjoy the same rights with regard to old age pensions as nationals of the latter country.

**Measures to Encourage Italian Emigration.** The Italian press reports that the Government is negotiating with the United States Government with a view to an amendment of the American Act restricting immigration so as to permit of an increase in the present very low quota fixed for Italian immigrants. According to a communication of the Italian General Emigration Department, the total number of emigrants from Italy in 1922 was about 260,000. The chief countries to which these emigrants proceeded were: France (about 70,000), United States (42,075) and Brazil (about 12,000). Several schemes for the settlement of emigrants in foreign countries are under consideration by the Italian Emigration Department, particularly with regard to Canada, Brazil, Mexico and Venezuela. It is estimated that in 1923 the total number of emigrants from Italy will be about 300,000.

**Serious Labour Disputes in Sweden.** Stoppages of work in London, involving about 80,000 workers began about the beginning of February. On January 29, lock-outs recognized by the Swedish Employers' Federation took effect in the iron and wood-pulp industries, 20,000 and 17,000 workers respectively being involved. From February 1, 25,000 workers in the saw-mills were locked out and another extensive dispute, which has been going on for some time, involves about 20,000 lumber men.

In addition to those trades in which a stoppage has already occurred, there are others in which the situation is very serious, viz., the building material, paper and mechanical engineering industries. The proposal to make a further reduction of about 10 per cent in wages has already led to strikes in the mechanical engineering industry in a number of centres. Among the iron workers the dispute concerns not only wages but also the distribution of hours of work.

**Decline in Shipbuilding output in 1922.** The number of vessels launched in the world in 1922 was 852. Their gross tonnage was 2,467,084, a reduction of 1,874,000 tons as compared with 1921, and of no less than 4,677,000 as compared with the record year 1919, when 7,145,000 tons were launched. The reduction in output in 1922 was spread over every country with the exception of Germany. The decrease in the United States amounted to 887,000 tons, in the United Kingdom to 507,000 tons and in Japan to 144,000 tons.

**Recent Wage Adjustments in the United States.** Wage adjustments, increases in all but three instances, which became effective in the United States between December 15 and January 15 were reported by various establishments in 40

industries, according to the report issued by the U. S. Bureau of Labour Statistics. The greatest number of establishments reporting increases in any one industry was 31 in the paper and pulp industry, followed by 20 in

the iron and steel industry, 19 in foundry and machine shops, 16 in stoves, 15 in sawmills, 13 in book and job printing, and 11 each in the brick, pottery, and newspaper printing industries.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION.

### The Labour Situation, Strikes, Prices.

#### The Labour Situation.

**C**ONSIDERABLE recovery from the heavy seasonal losses in employment recorded at the close of December was indicated during January; although further contractions, also of a seasonal character, in construction, transportation and trade were registered. The situation continued to be very much more favourable than during the same month of the preceding year.

At the beginning of February the percentage of unemployment among members of the trade unions stood at 7.8 as compared with 6.4 at the beginning of January and with 13.9 at the beginning of February, 1922. In these percentages no account has been taken of part-time workers, these being included among the employed.

The offices of the Employment Service reported a marked expansion in business during January, 1923, the number of applications registered, vacancies reported and placements made showing a considerable increase.

#### EMPLOYERS' REPORTS

Statements tabulated by the Dominion Bureau of Statistics indicate that employment at the end of January showed substantial reaction from the very severe losses that had been registered at the close of December. The improvement was especially pronounced in the manufacturing industries; logging and coal mining also reported increased activity, but in the

construction, transportation and trade groups large contractions were reported. Employment in all provinces except the Maritimes increased, the expansion in Ontario being the most notable; a marked revival of activity was indicated in the manufacturing industries in that province and also in Quebec. Curtailment of operations in steel works caused most of the loss in the Maritime district. In the Prairie Provinces, substantial increases in employment in railway car shops were partly offset by further declines in transportation, construction and also in trade. In British Columbia sawmills and vehicle factories were decidedly busier, but shipping and stevedoring showed contraction. The situation in all provinces was considerably more favourable than during January, 1922. Increased activity was indicated in Montreal, Toronto and Hamilton, while in Ottawa, Winnipeg and Vancouver the tendency was downward. The re-opening of the railway car shops was the most important single factor influencing employment in Montreal. Improvement, however, was also reported in tobacco, rubber, textile and non-ferrous metal products factories. On the other hand, employment in trade and in construction declined. The manufacturing industries in Toronto were more fully employed, notably so in the lead, tin, box, printing, rubber, meat and textile divisions. In this city also trade and construction were slacker. Sawmill, gas and textile firms in Ottawa registered additions to staffs, but the gains were not sufficient to offset shrinkage in trade

and construction. In Hamilton textile, wood, iron, steel, tobacco and electrical apparatus factories reported expansion, but retail stores were not nearly so busy as in December. The most pronounced declines in Winnipeg occurred in trade. Building construction, shipping and stevedoring and tobacco manufacturing in Vancouver showed curtailment. On the other hand tin can and gas concerns' were decidedly busier. A review of the returns by industrial groups shows that there was very pronounced reaction in the manufacturing industry from the losses recorded at the close of December, while improvement was also registered in coal mining and logging. The iron and steel, textile, lumber, rubber and tobacco divisions within the manufacturing group, in particular, reported a much more favourable situation than in the preceding month. Continued curtailment of operations was indicated in railway and water transportation and in highway and building construction, while especially heavy declines were recorded in trade, indicating dullness after Christmas activity. Employment in practically all of these industries however, was on a higher level than in January, 1922.

An article elsewhere in this issue gives in some detail employment conditions during January as reported by employers.

TRADE  
UNION  
REPORTS

At the end of January an increase in the volume of unemployment was registered by the 1,372 unions, for which returns were tabulated. These unions reported a combined membership of 140,585 persons, 10,925 of whom were out of work. This represents an unemployment percentage of 7.8 as compared with 6.4 at the end of December, 1922, and with 13.9 on January 31, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle

because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.) All provinces except New Brunswick and Quebec registered reduced activity in comparison with the preceding month, the decline in Manitoba being most marked owing to seasonal slackness in the building trades. Improvement among workers in the transportation and building divisions in New Brunswick, and in the garment trade in Quebec, contributed largely to the increases in those provinces. A more favourable situation was shown in all provinces than at the close of January, 1922. More employment than in the previous month was afforded workers in the manufacturing industries as a whole, but within the group several declines were registered. Cigar and tobacco, garment, iron and steel, and glass workers were busier as were also bakers and confectioners. Jewelry workers, metal polishers, and tradesmen in the printing and publishing, furniture and leather groups, on the other hand, were not so fully engaged. Within the iron and steel group considerable improvement was reported by machinists due to the re-opening after holiday shut-downs. Coal miners in Nova Scotia were slightly better employed, but considerably less work was afforded in the Alberta mines. Workers in the building and construction trades reported 6 per cent more unemployment than in December, every province except New Brunswick sharing in the decline. All tradesmen within the group, with the exception of steam shovel and dredgemen, and tile layers, lathers and roofers were less fully engaged. Steam shovel and dredgemen, and hod carriers and building labourers were not so busy as at the end of January, 1922, but in

the other trades improvement was registered. Less activity than in the previous month was indicated by transportation workers owing to increased idleness in the shipping and stevedoring division and among steam and electric railway employees. Fishermen, and lumber workers and loggers were busier than in December. Retail clerks, however, were not so fully engaged. Employment for theatre and stage employees remained on the same level, but hotel and restaurant employees, barbers, and stationary engineers and firemen were slacker.

#### EMPLOYMENT OFFICE REPORTS

During the month of January, 1923, the reports from the offices of the Employment Service showed that 31,822 references to positions were made and a total of 29,924 placements were effected. Of these, the placements in regular employment numbered 15,539 (12,827 of men and 2,712 of women), while those in casual work totalled 14,385. Vacancies reported by employers to the Service totalled 33,388, of which 25,700 were for men and 7,688 for women. The offices received 46,131 registrations from workers, of whom 36,841 were men and 9,290 were women. Compared with the last month of the preceding year a very marked increase is shown in the volume of business, while a comparison with January, 1922, would indicate that unemployment during this year was considerably less.

A detailed report of the work of the offices of the Employment Service during the month is given elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during January showed a heavy decline from the December level, but it was higher than the value of permits issued in

January, 1922. The estimated value of the permits issued during the month was \$3,705,256, as compared with \$9,058,473 in December, 1922, and \$2,933,035 in January, 1922.

According to the Canadian Building Review, issued by MacLean's Building Reports, Limited, the value of the contracts awarded during January amounted to \$9,840,800 as compared with \$52,472,400 in December, and with \$8,392,600 in January of last year. There was, therefore, a decrease of 81.2 per cent in the former and an increase of 17.3 per cent in the latter comparison. Of the total for the month under review \$126,500 or 1.3 per cent was to be spent in the Maritime Provinces, \$9,110,100 or 92.6 per cent in Quebec and Ontario and \$604,200 or 6.1 per cent in the Western provinces. A further analysis of the total for the month shows that \$2,604,400 was to be spent on residences, \$2,858,400 on business establishments, \$1,916,000 on industrial buildings, and \$2,462,000 on engineering contracts.

#### PRODUCTION REPORTS

The Dominion Bureau of Statistics reports that the production of pig iron during January showed an increase of 4,848 tons or 13.5 per cent over the previous month, the tonnage being 40,739 and 35,891 tons respectively. This represents an increase of 26.6 per cent over the output of the corresponding month of 1922 and an increase of 11 per cent over the average production of the corresponding month in the last two years. The output is in excess of the average monthly production during 1922 and less than the average for the previous year. The production of ferro-alloys declined slightly from 2,246 tons in December to 2,093 in January. Six furnaces were active in January, one of these being at Sault Ste. Marie, two at Hamilton and three at Sydney.

Steel production in January increased 1,306 tons or 2.8 per cent over

the output for the previous month, the tonnage being 47,951 tons and 46,655 in the previous month. The January production was greater than the monthly average for 1922 but slightly less than the average for the previous year.

A report from the Department's correspondent at Cobalt states that four cars containing about 323,149 pounds of silver ore were shipped from the Cobalt camp during January, as compared with seven cars containing about 484,504 pounds in the previous month. The Nipissing mine shipped 220 bars containing 352,081.47 ounces of silver, and the Mining Corporation of Canada shipped 240 bars containing 244,187.62 ounces, making a total of 460 bars containing 497,269.09 ounces of silver for the month of January, as compared with 757 bars containing 806,031.57 ounces in the previous month.

A report from the British Columbia Forestry Branch shows that 105,798,764 feet B.M. were scaled in that province during January. This total includes Douglas Fir, 46,360,189 feet, Red Cedar, 19,895,415 feet, Spruce, 11,147,575 feet, Hemlock, 14,619,624 feet, Balsam, 3,922,412 feet, Jack Pine, 2,888,929 feet, Larch, 2,748,583 feet, White Pine, 2,089,651 feet, Yellow Pine, 2,033,170 feet, Cotton Wood, 69,580 feet, and other species, 23,636 feet.

The gross earnings of the Canadian National Railways (including electric lines) according to a preliminary statement issued, amounted to \$9,214,540 in January as compared with \$8,300,098 in January, 1922. The gross earnings of the Canadian Pacific Railway for January were given in a preliminary statement as \$13,148,914 in comparison with \$11,337,974 for January of last year.

#### Strikes.

The time loss due to industrial disputes reported to the Department dur-

ing February was less than during January and also less than during February, 1922. There were in existence at some time or other during the month 17 disputes, involving 4,939 employees, and a time loss in working days of 51,258, as compared with 16 disputes in January, involving 2,715 employees, and a time loss in working days of 54,545. In February, 1922, there were recorded 25 disputes, involving 2,431 employees, with an estimated time loss of 63,490 working days. At the beginning of February there were on record fifteen disputes, involving 1,719 employees. Two new disputes commenced during February, involving 3,220 men, resulting in a time loss estimated at 13,287 working days. These disputes were terminated during the month. In three of the disputes carried over from January employment conditions ceased to be affected during February through the securing of employment elsewhere by those on strike or through the employers involved replacing the strikers with other workers. At the end of the month there were, therefore, on record eleven disputes involving 1,354 employees.

#### Prices.

The movement in prices during the month was slight; both the index number of wholesale prices and the family budget in terms of retail prices, however, were slightly higher than in January.

In wholesale prices the index number stood at 224.3 as compared with 223.0 for January; 229.5 for February, 1922; 270.1 for February, 1921; 356.6 for May, 1920 (the highest point reached); and 136.6 for February, 1914. Dairy products, fuel, (due to a decline in Connellsville coke) and house furnishings were, on the whole, slightly lower though these groups showed some important advances. Nearly all the other groups were higher, the most important increases being in grains and fodders, cattle, sheep, some fruits and vegetables, sugar, raw cotton, raw silk, linseed oil, paints, and raw rubber.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.53 at the beginning of February, as compared with \$10.52 at the beginning of January; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the highest point reached); and \$7.75 for February, 1914. Including the cost of fuel and rent with that of foods the figures averaged \$21.23 at the be-

ginning of February as compared with \$21.18 at the beginning of January; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the highest point reached); and \$14.54 for February, 1914. Butter and cheese were substantially higher with smaller increases in beef, milk, flour, sugar, and potatoes. The greatest decline occurred in eggs, though pork, bacon, and lard were also slightly lower. Fuel was slightly higher while rent was unchanged.

### IMPORTS AND EXPORTS DURING JANUARY, 1923.

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of January 1922 and 1923, and for the ten months ending in January of those years, and the exports

domestic and foreign of similar classes of goods for the same periods.

The following table shows the imports free and dutiable and the exports, domestic and foreign, of the various classes of products, for the month of January, 1923.

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
Agricultural and vegetable products, mainly foods	\$1,556,634	\$4,527,911	\$20,625,519	\$67,654
Agricultural and vegetable products, other than foods	2,759,372	2,360,112	1,603,763	162,424
Animals and animal products.....	2,147,563	2,480,249	9,289,341	24,885
Fibres, textiles and textile products.....	7,201,637	9,313,635	619,213	55,724
Wood, wood products and paper.....	1,146,797	1,621,679	18,365,388	38,011
Iron and its products.....	1,244,145	9,442,735	5,023,524	226,946
Non-ferrous metals and their products.....	1,203,075	2,075,050	4,526,957	57,613
Non-metallic minerals and products.....	6,602,421	7,374,214	2,490,109	59,086
Chemicals and allied products.....	761,566	1,015,987	1,198,434	8,079
Miscellaneous commodities .....	1,381,814	1,869,249	916,694	275,286
Totals .....	\$26,005,024	\$42,080,821	\$64,653,942	\$975,708

In January, 1923, the duty collected amounted to \$9,634,436 as compared with \$8,980,120 in January, 1922.

The following comparative table shows the values of merchandise en-

tered for consumption and the merchandise, domestic and foreign, exported in the months of January, 1922 and 1923, and in the ten months period ending January of these years respectively.

	Month of January		Ten months ending January	
	1922	1923	1922	1923
Merchandise entered for consumption.....	\$51,476,253	\$ 63,085,845	\$ 614,131,351	\$645,275,920
Merchandise, domestic, exported.....	46,198,080	64,653,942	634,054,918	797,237,683
Total .....	97,674,333	132,744,787	1,248,786,269	1,442,513,603
Merchandise, foreign, exported.....	899,604	975,708	11,420,124	11,625,167
Grand total, Canadian trade.....	\$98,573,937	\$133,720,495	\$1,260,206,393	\$1,454,138,770

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF FEBRUARY, 1923.

**N**O reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in February.

### Application Received.

An application for the establishment of a Board was received from employees of the British Empire Steel Corporation at Sydney, N. S., being members of Sydney Lodge No. 1, Amalgamated Association of Iron, Steel and Tin Workers. As this industry did not come directly within the scope of the Act, a Board could only be constituted with the joint consent of both parties to the dispute under Section 63 of the Act. The Registrar indicated to employing company and workmen his entire willingness to establish a Board if both parties agreed, but whilst the matter was under consideration the

employees, on February 13, ceased work on account of a dispute suddenly arising respecting the alleged unfair dismissal of one of their members, a matter apart from differences stated in the application. The efforts of the Minister were devoted to securing a speedy resumption of work, the good offices of the Department being exercised to that end both directly from Ottawa and through Mr. E. McG. Quirk, of Montreal. Direct negotiations were resumed and the employees returned to work on the 19th instant. Meantime the employing company declined to unite with the employees in submitting matters which had been in dispute to a Board of Conciliation and Investigation, but gave assurance that careful inquiry into the situation would be made with a view to remedying so far as might be practicable grievances on the part of the employees.

## COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS.

**T**HE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should correspondingly be increased or decreased, has forwarded its report to the Department of Labour for the quarter ending December 31, 1922.\* The Commission consisted of Mr. Matthew Gunness, representative of the miners; Mr. Tulley Boyce, representing the operators, and Mr. D. T. Bulger, Fair Wages Officer of the Department of Labour, Chairman.

As in previous investigations, forms containing a list of groceries, provisions, meats, etc., were sent out to the merchants and dealers with whom the majority of the miners were accustomed to trade in the various localities. The method of computing the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices at the end of the quarter, over the prices at the end of the preceding quarter, for groceries, provisions, meats, etc., and to add a further two-fifths of this increase (or decrease) as an equivalent to cover similar increases (or decreases) in clothing, etc.

\*For previous orders see LABOUR GAZETTE, December, 1922, and various preceding issues.

For the quarter ending December 31, 1922, an increase of 1.36 per cent was ascertained, which amounted to an increase in wages of 4 cents per day where the base rate was \$3 per day, and 4½ cents per day where the base rate was \$3.15, the increase in wages to become effective February 1, 1923, and to apply to all underground service, clerical and office employees.

Sharp increases were noted in sugar, molasses, lunch tongue, standard flour, graham, buckwheat, wholewheat flours, cheese and cream tartar. Slight increases were noted in lima beans, bar-

ley, rice, sago, canned corn, brooms, pastry flour, rolled oats, yellow cornmeal, lard, ham, bacon, butter, evaporated milk, coffee, evaporated figs and prunes. Sharp decreases were noted in pickles and cookies. Slight decreases were noted in jam, peas, small white beans, brown beans, canned beans, canned tomatoes, canned salmon, corned beef, canned roast beef, vinegar, sodas, tea, flavouring extracts, raisins, evaporated peaches and apples, matches, beef, mutton, pork and veal. No changes were noted in syrup, tapioca, canned peas, soaps, standard oatmeal and currants.

## SETTLEMENT OF DISPUTES IN DISTRICT 18, U. M. W. OF A.

Decisions of Independent Chairman of Arbitration Committee.

**I**N an agreement between the Western Canada Coal Operators' Association and District 18, United Mine Workers of America, covering the period from April 1, 1920 to March 31, 1922, there was a clause which was continued in the existing agreement, providing for the settlement of disputes arising during the life of the agreement. (The texts of the agreements were given in the LABOUR GAZETTE, August, 1920, pages 1048-1054 and September, 1922, page 955).

The agreement provides that in the event of the failure of the Pit Committee and the Mine Superintendent or Mine Manager to settle any local dispute it shall be referred to a joint committee composed of the Commissioner of the Western Canada Coal Operators' Association, the General Manager or General Superintendent of the mine where the dispute arose, and another appointed by him, the President of District 18, United Mine Workers of America, the President or Secretary of the local where the dispute arose, and one other District officer. If they agree, the decision shall be

binding on both parties. In the event of their failure to agree they shall endeavour to select an independent chairman, and failing to agree upon a chairman, the Commissioner of the Association and the President of District 18 shall ask the Minister of Labour to appoint such chairman, and the decision of the committee thus constituted shall be binding on both parties.

In conformity with this procedure, the Minister of Labour received a joint request dated January 3, from the President of District 18, and the Commissioner of the Western Canada Coal Operators' Association for the appointment of an independent chairman of the joint committee appointed to deal with disputes at the following mines: Mid-West Collieries, at Drumheller, Alberta; Canmore Coal Company at Canmore Alberta; Crow's Nest Pass Coal Company at Michel, B. C.; and Brazeau Collieries, Limited at Nordegg, Alberta. In compliance with the request the Minister appointed the Honourable W. E. Knowles, K.C., Moose Jaw, Sask., as independent chairman.

The findings of the chairman in the disputes submitted to him were as follows:

**Decision with reference to disputes affecting the Mid-West Coal Company at Drumheller Alberta.**

There were two disputes with reference to the Mid-West Coal Company, which, at the hearing, were re-drafted, and now stand as follows:

(1) A demand by the U. M. W. of A. for a ruling that the method of driving cross cuts in the Mid-West Mine at Drumheller brings it within the operation of the following clause on page 94 of the agreement:

"Where miner drives through pillar with two fast ends, same shall be regarded as a cross cut, and if 10' or less in width, shall be paid for at entry prices. If driven at room width and track is laid as in rooms, then room rates plus one-half the differential between rooms and entry shall be paid, and in rooms having entry yardage, one-half yardage shall be paid."

The evidence given, and my interpretation of the clause in the agreement bring me to the conclusion that the method of driving cross cuts in the Mid-West Mine does bring it within the operation of the above clause, and I find accordingly.

(2) The second matter was also re-drafted and by agreement was worded as follows: A demand by the U. M. W. of A. for a ruling that the following clause on page 92 of the Agreement is applicable to over-shovelling of coal in all cases where shovelling is done over the distance set out therein:

"All places breaking away the limit for shovelling coal shall be 12' from the rail, then tracks shall be laid. If no track is laid, 72c per lineal yard to be paid for over-shovelling, up to 21', which shall be the limit."

The question here is, should the term "breaking away" be subject to a narrow interpretation, or should it be given a broader meaning, so as to include the miner's work under ordinary conditions. I cannot think that it was the intention to give this additional consideration for over-shovelling in one place and not in another and my decision in this matter is in favour of the contention of the U. M. W. of A.

This finding to take effect from and after the end of this month.

Dated this 26th day of February, A.D. 1923.

**Decision with reference to dispute affecting the Canmore Coal Company, at Canmore, Alberta.**

*Re Rent of Canmore Houses:* The clause of the Agreement covering this feature will be found on pages 73 and 74. The question is whether, during the life of the Agreement, the Company is at liberty to increase its rental charges. The wording of the Agreement is:

"Water, outside taps, per house using, \$1.00 per month.

"Other supplies at present rates."

The question is, whether the expression "other supplies" should be interpreted to include house accommodation.

My finding is that with regard to such houses as were constructed and in use at the Canmore Mine on the 1st of April, 1920, the Company is not at liberty to increase its rental charges. I confine this ruling to such house accommodation as existed on the said date. It will not apply to houses moved from elsewhere, nor to houses built since the Agreement. It will, however, apply to houses to which an additional room has been built, but if the Company wishes, it may charge for the additional room at the increased rate of fifty cents per month for such room. My reason for confining it to the houses available on the said date is that the miners have no existing right interfered with and are not in any way prejudiced in the cases where there was additional accommodation provided, as they were, of course under no obligation to use this additional house accommodation, if the rental did not suit them.

This ruling will take effect on the First of the present year.

Dated this 1st day of March, 1923.

**Decision with reference to disputes affecting the Crow's Nest Pass Coal Company at Michel, B.C.**

With regard to disputes coming from the Michel Local Union, my findings are as follows:

*First*—With regard to pushing cars in mine, I find that as a matter of fact the present system was inaugurated in or about the year 1913, and up to that time there had been installed what is known as the McGinty system, and I further find from the evidence that since that time miners have not been paid for pushing cars where the distance is not in excess of sixty feet, and my decision is that the above system should not be disturbed, and that the pushing of cars up to

the distance of sixty feet is part of the miner's work in connection with his tonnage rate.

*Second*—With regard to drivers taking horses to and from their work in Number 8 Mine, my decision in this matter is that inasmuch as it is an indispensable part of the employers' work, and is done by the employees out of the regular shift hours, that an extra should be allowed. There was no definite evidence from which one could decide to a minute as to how much extra time should be taken, but I believe that from evidence on a whole, justice would be done if half an hour a day were allowed as an extra, and I so decide.

This finding to take effect from and after the end of this month.

Dated this 26th day of February, A.D. 1923.

**Decision with reference to dispute affecting the Brazeau Collieries, Limited, at Nordegg, Alberta.**

*Re Nordegg Cap Rock Dispute:* The question here is as to whether a certain material in No. 3 seam should be classified as Cap Rock. Cap Rock is provided for in Seam No. 2, and

Mr. Shanks, the Manager of the Mine, admitted that if the material in Seam No. 3 was Cap Rock it should be paid for as in No. 2. Samples were filed, and I am convinced that the material in question is not Cap Rock, as the term is understood, but is a clod or refuse of a different kind. In this case the evidence submitted was quite full, and after considering very carefully, my mind is quite clear that the refuse in question is not similar to what the contract speaks of as Cap Rock, and the claim should be disallowed.

Dated this 26th day of February, A.D. 1923.

**Decision with reference to dispute affecting the Midland Collieries, Alberta.**

In connection with the case of Wm. C. . . . dismissed from the Midland Collieries, which was submitted to the undersigned by consent, and was not included in the submissions which had been regularly included in our docket, I beg to say that my decision is that I cannot see my way clear to direct the collieries to reverse this man's dismissal.

Dated this 26th day of February, A.D. 1923.

## STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1923.

THE following table shows the number of strikes and lockouts in existence in Canada at some time or other during February, 1923, reported to the Department, together with the number of employees involved and the time loss in working days, as compared with the previous month and with February, 1922.

	Disputes	Number of employees involved	Time loss in working days
February, 1923..	17	4,989	51,258
January, 1923..	16	2,175	54,545
February, 1922..	20	2,569	62,737

countered. In the statistical tables, therefore, strikes and lockouts are recorded together under the term "industrial dispute."

A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

Of the seventeen disputes in existence during February there were ten in the printing and publishing trades, and of these all but one had commenced in 1921. Two new strikes were reported during February, that of woodworkers in furniture factories at Hanover, Ont.,

The record of the department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely en-

and that of steel workers at Sydney, N.S., but both of these strikes were terminated during the month. A strike of clothing workers in Montreal and a strike of coal miners at Joggins, N.S., which began in January were not reported to the Department until too late for inclusion in the February issue of the LABOUR GAZETTE.

There were fifteen disputes carried over from January into February, involving 1,729 employees. During the month in three of the strikes employment conditions ceased to be affected, and the two strikes beginning in February were terminated during the month, so that at the end of February there were on the record twelve disputes: photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors, Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; street railway motor-men and conductors at Niagara Falls, and coal miners at Joggins, N.S.

#### Disputes by Industries.

The following is a review of disputes by those groups of industries in which strikes and lockouts occurred during the month in the order in which they appear in the statistical table.

#### MINING, NON-FERROUS SMELTING AND QUARRYING

The two strikes of coal miners in the immediate neighborhood of Edmonton and in the Cardiff field, a short distance North of Edmonton, which had begun early in December and at the end of November respectively, with regard to union recognition and working conditions, were unsettled at the end of February but a number of miners in both cases returned to work and others were replaced so that by the end of the month employment conditions were reported to be no longer affected. Several pickets

arrested for assault or for unlawful assembly were sentenced to fines or imprisonment during February.

#### MANUFACTURING

*Clothing.*—Clothing workers in the employ of two firms at Montreal went on strike on January 22, alleging that the employers had violated the agreement as to working conditions. The strikers found employment elsewhere and employment conditions were, therefore, reported to be no longer affected by the end of February. During the strike the employers secured an injunction prohibiting the picketing of their plants by the strikers on the ground of intimidation. Later some of the pickets were arrested for interfering with pedestrians but were not convicted.

*Printing and Publishing.*—The ten strikes in printing trades carried over from January, nine of which had begun in 1921, remained unsettled at the end of February but the number of employees on strike was reduced as work was secured elsewhere.

*Wood Products.*—A strike of employees in furniture factories at Hanover, Ontario, began on February 13, when 65 men struck, being joined by others each day until about 220 men were involved. The men wished the discontinuance of an efficiency system under which each employee received a bonus when his output exceeded on the average a certain standard. On February 20 an agreement was reached between a committee of the employees and the employers providing that in each factory a committee of employees should have a conference once each month with the management to discuss any grievance and that no one should be reduced in wage rates for one year from date on account of falling below the standard and that employees would co-operate with the employers in the efficiency system and that anyone discharged previously for spreading propaganda against the efficiency system would be re-instated.

## STRIKES AND LOCKOUTS DURING FEBRUARY, 1923.

Industry, occupation and locality	Number of employees involved	Time lost in working days	Particulars
(a) Strikes commencing prior to February, 1923.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Cardiff coal field, Alberta.	100	1,500	Commenced November 21, 1922, for recognition of the union and improved working conditions. From the beginning of January strikers were gradually replaced.
Coal miners, Edmonton coal field, Alberta.	200	3,000	Commenced December 1, 1922, for recognition of union and improved working conditions. From the beginning of January strikers were gradually replaced.
Coal miners, Joggins, N.S. ....	70	1,680	Commenced January 28, 1923, for increased wages. Unterminated.
MANUFACTURING—			
<i>Clothing:</i>			
Clothing workers, Montreal, .Que.	65	975	Commenced January 22, against alleged violation of agreement. Strikers gradually obtained work elsewhere during February.
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que...	30	720	Commenced May 2, 1921, for shorter hours, Unterminated.
Printing compositors, Hamilton, Ont.	37	888	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Unterminated.
Printing compositors, Montreal, Que.	21	504	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Unterminated.
Printing compositors, Montreal, Que.	205	4,920	Commenced July 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Montreal, Que.	25	600	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Unterminated.
Printing compositors, Toronto, Ont.	572	13,728	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Winnipeg, Man.	190	4,560	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Unterminated.
Printing compositors and pressmen, Halifax, N.S.	51	1,224	Commenced May 2, 1921, for shorter hours with same weekly wages. Unterminated.
Printing compositors and pressmen, Ottawa, Ont.	113	2,712	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors and pressmen, Vancouver, B.C.	26	624	Commenced May 2, 1921, for increased wages and 44-hour week. Unterminated.
TRANSPORTATION—			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	14	336	Commenced July 1, 1922, for recognition of the union. Unterminated.

## (b) Strikes commencing during February, 1923.

MANUFACTURING—			
<i>Wood products:</i>			
Woodworkers, Hanover, Ont. ....	220	1,287	Commenced February 12, against continuance of "incentive production plan". Terminated by negotiations February 20.
<i>Iron and steel products:</i>			
Steel workers, Sydney, N.S. ....	3,000	12,000	Commenced February 13, against discharge of employee. Terminated February 19.

*Iron and Steel Products.*—Steel workers in the plant at Sydney, N.S., became involved in a strike on February 13, when the employees in the nail mill struck in protest against the discharge of an employee for alleged insubordination, the employees claiming that the employee was discriminated against owing to activity in the union. About 3,000 employees in other departments joined in the strike or became involved. During the next two days the blast furnaces and coke ovens were shut down. Early in the morning of the 17th re-

presentatives of the employees agreed to a proposal of the management that the case of the discharged employee would be investigated by the general superintendent and that the dismissed employee would be reinstated if the dismissal were found to be unjustifiable. The maintenance men on the fires, boilers, etc., returned to work that day and the other men on the following Monday. As a result of the investigation the general superintendent found that the dismissal of the employee in question had been justifiable.

### STRIKES AND LOCKOUTS IN CANADA DURING 1922.

**S**TRIKES and lockouts during the calendar year 1922, numbered 85 as against 145 for the preceding year, but the number of workers involved stood at 41,050 as compared with 22,930 during 1921. In the amount of time loss, as well as in the number of employees involved, the figures in the disputes of 1922 greatly exceeded those of 1921, there being 1,975,276 working days lost in 1922 as against 956,461 in 1921, but approximately 50 per cent of this time loss occurred in a single strike, that of the coal miners in Alberta and British Columbia which lasted from April to the end of August.

The feature of the year was the great time loss due to strikes of employees in coal mining, 1,219,064 working days out of the total of 1,975,276 being due to the strikes in this industry, while most of this time loss, 931,960 days, occurred in a single strike in British Columbia and Alberta (District 18 of the United Mine Workers of America). In addition to this strike and the strike of nearly 15,000 miners in Nova Scotia in August, lasting nearly three weeks, there were twelve other strikes in coal mining. The accompanying chart shows that during the 22 years for which a record is available the time loss in strikes in coal mining has been great in 1922, 1919, 1917, 1913, 1911, 1910, 1909 and 1903, and

that in each of these years it accounted for a large proportion of the total time loss for the year, except in the year 1919. The general strike at Winnipeg in 1919, in sympathy with a strike of the metal trades in that city, and the general sympathetic strikes in other cities, accounted for the large total of time loss due to metal trade strikes in that year. (The time loss in working days for metal trades in 1919, shown in the chart, includes also the time loss incurred in strikes in sympathy with strikes in the metal trades that year, 851,095 at Winnipeg and approximately 25,000 at Toronto, leaving a loss of 1,117,609 days for strikes in the metal trades only.) It will be noted that except in 1918, 1919 and 1920 there has been very little time loss due to strikes in the metal trades.

The most important strikes of the year were two strikes of coal miners, that in British Columbia and Alberta. District 18 of the United Mine Workers of America, from April 1 to August 28, and that in Nova Scotia, District 26 of the same organization, from August 14 to Sept. 5. The first of these strikes was against a proposed reduction in wages and was concurrent with a strike of coal miners in the United States against a reduction of wages. As in the United States the scale of wages prior to the

strike was put in force after September 1, until March 31, 1923, in most of the mines concerned. In Nova Scotia wages had been reduced early in the year and the employees struck for a renewal of the 1921 rates. The settlement provided for increased rates but lower than in 1921. An account of these strikes appeared in the LABOUR GAZETTE for September.

Other important strikes were those in the printing trades, most of which commenced in the early summer of 1921 for the 44-hour week in job printing offices. Ten of these were carried over into 1922 and were also unsettled at the end of the year. The number of men on strike, however, was reduced gradually, settlements being effected with some employers, while some of the employees secured work with other employers and some returned to work on the employers' terms.

A strike of the railway employees of the steel and coal companies in the neighbourhood of Sydney, N.S., which began on November 22, 1920, was not settled until November 25, 1922, the employees resuming work on December 1, 1922, under agreements between the employing companies and committees of employees which established rates of pay and working conditions.

Other strikes causing considerable time loss were those of fishermen in British Columbia, in July, coal miners near Edmonton in December, clothing workers in Montreal on several occasions, and longshoremen in Montreal in April and May.

Of the 85 strikes and lockouts during the calendar year, 15 were carried over from 1921, there being 70 disputes commencing in 1922. The number of employees involved in these 85 disputes was 41,050 and the total time loss was estimated at 1,975,276 working days. This is ascertained by multiplying the number of men directly affected through each strike, or lockout, by the number of working days they are so affected

during the time the firm or establishment is involved.

The record of the department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together under the term "industrial disputes."

A strike or lockout, included as such in the records of the department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the department. During 1922 there were 14 such disputes involving 796 employees and a time loss of 1,539 working days. Among these 14 disputes there were the following involving fairly large numbers of employees: 2 strikes of coal shippers at Sydney, N.S., for increased wages, involving 202 employees, lasting 8 hours and 24 hours respectively, and causing a total time loss of 269 working days; a strike of coal miners at Drumheller, Alberta, for increased wages, involving 120 employees and a time loss of 120 working days; and a strike at a pulp and paper plant at Fort Frances, Ontario, for increased wages, involving 146 employees and a time loss of 243 working days.

An analysis by numbers of employees involved shows 1,000 or more employees involved in 4.7 per cent of the disputes, while in 56.5 per cent there were less than 100, and in 81.2 per cent less than 250 employees involved. As in 1921 a large proportion of the strikes were of brief duration, 43.6 per cent ending within 15 days. The number of strikes lasting 30 days or over was 21.2 per cent of the total number. As regards time loss, 31.8 per cent of the disputes resulted in a loss of less than 500 working days each and 42.4 per cent in a loss of less than 1,000 working days each. There-

were 4 strikes each of which resulted in a time loss of over 100,000 days, two being in the mining group and two in the printing and publishing group.

The province most affected by industrial disputes during the year 1922 was Alberta where 20 disputes (23.5 per cent of the total) occurred, involving 10,562 employees and causing a time loss of 966,842 working days. Nova Scotia had only 5 strikes, but 15,136 employees were involved and 321,062 working days lost. In Quebec there were 19 disputes involving 10,666 employees and resulting in a time loss of 223,343 working days, while in Ontario the 24 disputes recorded affected only 2,934 employees, but caused a time loss of 368,018 working days.

An analysis by industries shows that measured by time loss the mining, smelting and quarrying group sustained the greatest loss with 1,219,064 working days lost or 61.7 per cent of the total

time loss for the year. The printing and publishing group was second with a time loss of 534,874 working days, or 27.1 per cent of the total. The time loss in the remaining groups was comparatively small, the third greatest loss being only 2.6 per cent of the total. The mining group was also the one most affected by disputes when the unit of measurement is the number of employees involved, 25,179 employees having been affected. The clothing group was next with 5,626 employees and water transportation third with 3,119 employees involved. The greatest number of disputes in any one group was 17 in building and construction. The mining, smelting and quarrying group was second with 14, and the printing and publishing, third with 13 disputes.

Classified by causes, 58 of the 85 disputes recorded, or 68.2 per cent of the total, involved wages. Of this number

(Continued on page 256)

TABLE I.—RECORD OF LABOUR DISPUTES BY YEARS.

Year	Number of Disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Employees involved	Time loss in working days
1901.....	104	104	273	28,086	632,302
1902.....	121	121	420	12,264	120,940

Year.....	*285	*145	*85	*52,150	*22,930	*41,050	886,754	956,461	1,975,276

\*These figures relate only to the actual number of disputes in existence and the employees involved during the year, not being a summation in each case of the monthly figures.

41 were in protest against wage reductions. Eight were for increased wages, 7 for increased wages and shorter hours and 2 for increased wages and other changes. In 4 of the strikes the cause was protest against longer hours, while 7 were for union recognition.

Fifteen disputes terminated in favour of the employees and 35 in favour of the employers; 20 were settled by compromise, while 15 were indefinite or unterminated. Taking the number of employees as the unit of measurement the records show that 7,947 employees were involved in strikes that terminated unfavourably for them, while 14,462

were concerned in strikes which terminated in their favour. There were 15,796 employees involved in strikes that were settled by compromise and 2,845 in disputes which remained unterminated at the end of the year, or were indefinite in result.

As regards methods of settlement, 35 terminated as a result of negotiations between the parties in dispute, 5 through efforts of conciliation or mediation, instituted in three cases through the Department of Labour, and one by arbitration. In 15 disputes the employees returned to work on the employers' terms and in 13 strikes the strikers were replaced by other workers.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING JANUARY, 1923.

THE *British Ministry of Labour Gazette* for February contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland, during January, 1923, based upon returns from employers and workpeople.

NUMBER, MAGNITUDE AND DURATION.—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in January, in Great Britain and Northern Ireland, was 54, as compared with 21 in the previous month and 47 in January, 1922. In these new disputes 14,700 workpeople were directly involved and 2,400 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition, 1,900 workpeople were involved, either directly or indirectly, in 17 disputes which began before January, and were still in progress at the beginning of that month. The number of new and old disputes was thus 71, involving 19,000 workpeople, and resulting in a loss during January of 117,000 working days.

The principal new dispute was that which began on January 20 in the book-binding industry in the London district. This dispute arose out of the refusal of bookbinding employers to adopt the rates of wages for warehousemen, packers, porters, etc., agreed upon by the London Master Printers' Association. It is estimated that at the end of January approximately 2,500 workpeople were involved in the dispute, but the number was considerably increased in February. On February 13 it was agreed to refer the dispute to arbitration. The dispute involving over 500 teachers in elementary schools at Gateshead, which arose out of a proposed reduction of salaries

from Burnham Scale No. III, to Scale No. II, was settled on January 9, after lasting over two months; the Scale No. III is to be retained until March 31, 1924, subject to a reduction of 5 per cent accepted nationally as from April 1, 1923.

CAUSES.—Of the 54 disputes beginning in January, 22, directly involving 4,600 workpeople, arose out of proposed reductions in wages; 12, directly involving 2,500 workpeople, on other wages questions; 6, directly involving 1,500 workpeople, on questions respecting the employment of particular classes or persons; 6, directly involving 1,300 workpeople, on questions of trade union principles; 5, directly involving 4,300 workpeople, on question of trade union principle; and 3, directly involving 500 workpeople, on other questions.

Groups of Industries	No. of disputes in progress in January			Number of workpeople involved in all disputes in progress in January	Aggregate duration in working days of all disputes in progress in January
	Started before January 1	Started in January	Total		
Mining and quarrying .....	4	12	16	10,100	44,000
Metal, engineering and shipbuilding .....	6	11	17	1,400	11,000
Textile and clothing .....		3	3	1,000	6,000
Printing, paper, etc., trades .....	1	3	4	3,300	26,000
Other trades .....	6	25	31	3,200	30,000
Total, Jan., 1923	17	54	71	19,000	117,000
Total, Dec., 1922	28	21	49	7,400	72,000
Total, Jan., 1922	36	47	83	15,400	162,000

RESULTS. — Settlements were effected in the case of 28 new disputes, directly involving 7,100 workpeople, and 5 old disputes, directly involving 600 workpeople. Of these new and old disputes,

10, directly involving 5,400 workpeople, were settled in favour of the workpeople; 11, directly involving 1,500 workpeople, in favour of the employers; and 12, directly involving 800 workpeople, were compromised. In the case of 8 disputes, directly involving 1,500 workpeople, work was resumed pending negotiations.

The accompanying table analyses the disputes in progress in January, in Great Britain and Northern Ireland, by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all the disputes in progress.

### ANNUAL CONFERENCE OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES.

**T**HE Fifth Annual Conference of the Canadian Association of Building and Construction Industries was held at the city of Quebec on February 6 to 9. About eighty delegates were present. The President, Mr. James B. Carswell, of Toronto, occupied the chair. Among the subjects discussed were "Seasonal Employment in the Construction Industry" and "The Shortage of Mechanics and the Cure". Papers on these subjects were presented by Messrs. J. P. Anglin, Montreal and J. M. Pigott, Hamilton, respectively, and they were referred to the Committees on Apprenticeship and Seasonal Employment.

In his paper on seasonal employment Mr. Anglin referred to the boards usually known as Building Congresses or Construction Service Bureaus that have been formed in various centres in the United States to deal with such questions. These boards are united in a national body called the American Construction Council, which is giving immediate attention to the problems of the stabilization of the construction industry in order to mitigate the evils of seasonal employment and the trade migration of labour, and the reduction of the shortage of building mechanics and the establishment of the necessary apprenticeship system. Mr. Anglin recommended the formation of a Canadian Construction Council along similar lines. He said that a local building Congress should be composed of representatives of the local Chamber

of Commerce or Board of Trade, the Manufacturers' Association, building material men, real estate boards, financial interests concerned as well as labour contractors, architectural and engineering bodies.

He recommended a general study along the following lines. (1) Determination of the kinds of work which lend themselves to winter performance. (2) Determination of methods of equipment for conducting construction in cold weather. (3) Determination of costs of the various classes of winter work as compared with similar work in the summer. (4) Determination of the limit where extra cost of winter work ceases to be profitable.

He referred to the work of a committee in Montreal composed of representatives of bodies connected directly or indirectly with the building industry, which had been formed in order to consider the question of seasonal employment. This committee had been requested at a meeting of representatives of all interested organizations of Montreal, to study the problem and report with definite suggestions to another meeting.

He claimed that the technical problem of developing effective construction practices for cold weather had, to a considerable extent, been solved. All cementing and building masonry operations could be carried on in winter by heating the material and housing

the work under construction. Steel could be erected in any weather in which the workman could withstand the cold and work safely, and interior building work could be performed in winter with little loss of efficiency. He pointed out the economies that would be effected through winter construction, in spreading overhead costs over the whole year, reducing the seasonal employment, reducing the peak in the curve of production of construction materials and equipment, and equalizing the demand on transportation agencies.

Mr. Pigott's paper appears in another article in this issue entitled "An Apprenticeship Plan for the Building Industry."

A paper was read by Mr. E. G. M. Cape of Montreal on "Construction Activities in Canada in 1923." He stated that he had written to building exchanges in every principal city in Canada, and their answers showed in practically every case that they anticipated a greater building activity during 1923. With regard to the probable cost of building he showed by means of a time chart the relation between variations in the cost of building materials and labour and the cost of living. From the chart he showed that the curve of labour and materials had not yet come down to that of the average cost of living, and he concluded that until this occurred a further reduction in the cost of building would appear to be indicated. With regard to the likelihood of financiers committing themselves to capital expenditures for construction against the unfavourable European outlook, which would probably cause very little British capital to be offered for investment, he set the large amount of American capital available and the large crop harvested by the farmers last autumn. With regard to the relations between employers and employees, Mr. Cape said it appeared there would be little change in the present scale of wages

and that few strikes or lockouts were in contemplation by either party.

The report of the labour committee of the Conference, which was adopted, was as follows:

Your Committee on Labour, after reviewing the work of last year, and in the light of that experience, wish to re-affirm the Basic Principles as laid down in the able report presented by the Labour Committee at our last Conference in Hamilton.

We feel that in these principles we have a firm foundation on which to build for the coming years, and do not desire to make any changes.

Further, we believe that clauses three and four, of last year's report, dealing with the question of agreements, and wages and results, should again be incorporated in this report.

Clause 3. Resolved, that when any agreements are reached with Labour, that these be reduced to writing, and that they should only cover wages and hours of work, having in view the stabilizing of rates, and that the Basic Principles enunciated above should find expression in all such agreements.

Clause 4. Wages and Results. Resolved, that the very apparent injustice created by the flat rate system appears to have no complete solution at this time; but it is recommended that all members of this Association should do everything possible to reward the more efficient men, by arranging, by transfer, to provide constant employment for these men.

In regard to the question of wages and hours, the Committee recommends that both of these matters should be left to the local Association to deal with taking into consideration conditions as they exist in each locality.

Your Committee feels that the future horizon is brighter than it has been for some time and that the construction industry, with reasonable care, is entering on a period of reasonable prosperity.

The report of the previous year to which reference is made above appeared in the issue of the LABOUR GAZETTE for February, 1922, on page 191.

A joint report was presented by the Committees on Apprenticeship and on

**Seasonal Employment.** The report, which was also adopted, was as follows:

Your Committees on Apprenticeship and Seasonal Employment had several meetings, where consideration was given to these important questions, and the papers presented at this Conference on them.

It was finally agreed that time would not permit the study necessary to work out an adequate programme for obtaining the results desired.

It was therefore decided to instruct the Executive to appoint Standing Committees, each composed of three members, located so that frequent meetings may be held; further, that these Committees be given power to add to their number.

This Joint Committee feels that the subject of "Shortage of Building Mechanics" is of such vital importance to the country at the present time, that the Dominion Government should be approached by the Executive Committee or the purpose of arranging a Conference under Government auspices, of all the interests directly concerned, and that the question of "Seasonal Employment," which is bound up in many respects with the above question, be considered at the same time.

This Committee feels, however, that to these questions must be added the question of "Immigration." At best, the proposed Apprenticeship plan will only slowly correct the shortage of building mechanics, after years of work; in other words, by succeeding in our apprenticeship plans we may hold Canada from slipping back, so far as the building industry is concerned. If, however,

Canada is to develop, then we must open our gates to a reasonable extent; we should ask for a change in our immigration policy.

It is further recommended by this Committee, that in addition to approaching the Dominion Government, similar action should be taken in the different Provinces in regard to their mechanics, and that the standing committees act with them in an advisory way, in order to correlate the work.

The following resolution with reference to day labour was carried:

Whereas the question has been raised by a number of contractors as to the advisability of the Canadian National Railway erecting structures such as roundhouses, stations, etc., by day labour, with the consequent increase in public expenditure.

Be it Resolved that this Association go on record as pointing out to the Board of Directors of the Canadian National Railway the fact that Canadian contractors, with their efficient organization of both personnel and equipment are in a position to carry out this work much more economically than it can be done by the Railway by day labour, and as requesting that tenders be obtained on this class of work.

The officers elected for the ensuing year included Mr. Joseph M. Pigott, Hamilton, president; Mr. John Grieve, Montreal, Honorary Secretary and Mr. F. B. McFadden, Toronto, Honorary Treasurer.

The next conference will be held at Windsor, Ont.

## SESSIONS OF THE GOVERNING BODY OF THE INTERNATIONAL LABOUR OFFICE (LEAGUE OF NATIONS).

**T**HE term of office of the Governing Body of the International Labour Office which was elected at Washington, D.C., in 1919 expired in November last. The election of the new Governing Body, which is to hold office for a period of three years, was held at the Fourth Session of the International Labour Conference and resulted as follows:—

Members representing the Governments of the eight States of chief indu-

ustrial importance: Belgium, Canada, France, Germany, Great Britain, India, Italy and Japan.

Members representing the Governments of the States elected by the Government Delegates present at the Conference (with the exception of those representing the eight States of chief industrial importance): Spain, Chili, Finland and Poland.

Members representing the employers elected by the Employers' Delegates present at the Conference: Titulary Members—Mr. Carlier (Belgium), Mr. Gemmill (South Africa), Mr. Hodac (Czechoslovakia), Mr. Lithgow (Great Britain), Mr. Olivetti (Italy), and Mr. Pinot (France); Deputy Members—Mr. Colomb (Switzerland), Mr. Coulter, (Canada), Mr. Graupera (Spain), Mr. Oersted (Denmark), Mr. Verkade (Netherlands), and Mr. Vogel (Germany).

Members representing the workers, elected by the Workers' Delegates present at the Conference: Titulary Members—Mr. Jouhaux (France), Mr. Leipart (Germany), Mr. Tom Moore (Canada), Mr. Oudegeest (Netherlands), Mr. Poulton (Great Britain), and Mr. Thorberg (Sweden); Deputy Members—Mr. d'Aragona (Italy), Mr. Caballero (Spain), Mr. Hueber (Austria), Mr. Joshi (India), Mr. Schurch (Switzerland), and Mr. Zulawski (Poland).

Mr. Arthur Fontaine was unanimously re-elected Chairman of the Governing Body. Mr. Jules Carlier (for the employers) and Mr. Jan Oudegeest (for the workers) were also re-elected Vice-Chairmen. The new Governing Body expressed its confidence in Mr. Albert Thomas, the Director of the Office, and its sympathy with him in its work.

The Governing Body of the International Labour Office met on January 30 at Geneva under the chairmanship of Mr. Arthur Fontaine.

The delegates present were:

**Governments:** Count de Altea (Spain); Major Boyd Carpenter (Great Britain); Mr. Fontaine (France); Sir Louis Kershaw (India); Mr. Leymann (Germany); Mr. Mahaim (Belgium); Mr. Mannio (Finland); Mr. de Michelis (Italy); Mr. Quezadar (Chile); Mr. Sokal (Poland); Mr. Tsuchya (Japan).

**Employers:** Mr. Carlier (Belgium); Mr. Gemmill (South Africa); Mr. Lembert-Ribot (France); Mr. Lithgow

(Great Britain); Mr. Oersted (Denmark); Mr. Olivetti (Italy).

**Workers:** Mr. d'Aragona (Italy); Mr. Backlund (Sweden); Mr. Hueber (Austria); Mr. Oudegeest (Netherlands); Mr. Poulton (Great Britain); Mr. Schurch (Switzerland).

### *Financial Questions.*

The Governing Body discussed a certain number of questions relating to the finances of the League of Nations in so far as they affect the Budget of the International Labour Office.

The Finance Committee was instructed to consider with the Director every possible means of effecting economies.

### *Director's Report.*

At the sittings held on January 31 the Governing Body discussed the report of the Director on the general work of the Office during the last three months and, in particular, on the enquiries in progress—the enquiry on unemployment, the enquiry concerning the standard of living of the working classes in relation to the pre-war standard in countries with a depreciated exchange (Austria, Germany, Hungary, Poland, the Serb-Croat-Slovene Kingdom), etc.

### *Director's Visit to America.*

The Director presented to the Governing Body a complete account of his visit to America. He said that in the United States he had come into contact with employers' and workers' organisations and also with important scientific organisations and the universities. He had had interviews with officials of the Department of Labour, with Mr. Secretary of State Hughes and with President Harding.

The Director stated that there was reason to hope that the technical collaboration of the United States in enquiries instituted by the Office, which had already been admitted in a number of cases, would develop still further. The

relations established between the International Labour Office and the administrative and technical services of the United States Department of Labour had entered on a new stage of development. The American Federation of Labour and the United States Chamber of Commerce had demonstrated publicly the interest which they take in the work of the International Labour Office and were seeking means of collaborating with the Office.

He had also visited Canada, which is a member of the International Labour Organisation. He had been received by the Cabinet and had discussed with the Premier and the Minister of Labour the problem of the ratification of conventions. The sympathetic interest with which the work of the Office is followed in Canada was clearly shown by the relations established with employers' and workers' organisations and with agricultural associations, which play so important a part in Canadian policy.

Finally, a very useful visit had been paid by officials of the International Labour Office to Cuba. They had received a warm welcome.

The Chairman expressed to Mr. Albert Thomas the Governing Body's appreciation of his activities and the results achieved.

#### *Agenda of 1923 Conference.*

The Governing Body then proceeded to consider the agenda of the 1923 Session of the International Labour Conference. Under Article 401 of the Treaty of Versailles, questions to be included on the agenda must be transmitted to the Governments four months before the meeting of the Conference.

The Governing Body considered that in view of the general movement which has taken place in the direction of establishing the eight hour day and in view of the increased leisure enjoyed by the workers, it would be useful to establish guiding principles based on experience

already acquired in a number of countries, for measures relating to the utilisation of the leisure hours of workers. It was accordingly decided that the question of the utilisation of workers' leisure should be placed on the agenda of the forthcoming Conference.

With regard to the question of the equality of treatment of national and foreign workers, the Governing Body considered that it was not advisable to cover the whole sphere of social and industrial legislation, but that the question should be limited to consideration of practical schemes for equality of treatment in respect of workers' compensation. The question was accordingly placed on the agenda in that form.

The Governing Body discussed at length the question of the determination of general principles of factory inspection and finally decided to include that question in the agenda.

It was also decided to adopt the suggestion of the French Government to include on the agenda the question of the 24 hours weekly rest period in glass works where processes are continuous.

A proposal to include in the agenda methods of fixing minimum wages, in particular in unorganized industries, was rejected by 11 votes to 10.

The question of night work in bakeries will be discussed again at the next Session of the Governing Body.

It was decided that the Fifth Session of the Conference should open on October 18, 1923.

#### *Building Sub-Committee.*

A report of the committee appointed to make the arrangements for the competition of architects for the new plans for premises for the International Labour Office was submitted to the Governing Body. The competition was postponed until the Swiss National Council has ratified the gift of the site offered by the Swiss Government.

*Resolutions of 1923 Conference.*

The Governing Body then proceeded to discuss the action to be taken with reference to a series of resolutions referred to it by the 1922 Session of the Conference, dealing with the collaboration of experts in the various countries in the consideration of immigration problems, the relations between the International Labour Office and the international co-operative organisations, the working class housing problem, the advisability of appointing national correspondents in Eastern countries, and the cost of issuing the publications of the

Office in languages other than French and English.

All these questions were examined from the point of view both of the funds available and of the functions assigned to the Office by the Peace Treaty. Generally speaking, with regard to all the questions referred to it by the 1922 Conference, the Governing Body confined itself strictly to measures falling within the normal work of the Office.

The second report of the Finance Committee on the financial situation was adopted.

The next session of the Governing Body will be held at Geneva on April 10.

---

**PROPOSED FEDERAL-PROVINCIAL CONFERENCE FOR CONSIDERATION OF INTERNATIONAL LABOUR CONFERENCE MATTERS.**

**F**OLLOWING an exchange of correspondence between the Prime Minister of Canada and the several provincial premiers, it has been decided by the Dominion Government that a conference shall be held with the provincial governments in the early part of next summer to deal with matters arising out of relations between Canada and the International Labour Conference (League of Nations). The date of the conference has not yet been fixed but will be determined during the spring.

It will be recalled that the Federal Government, in connection with the Dominion-Provincial Conference which was held in Ottawa in September last for consideration of the unemployment situation, proposed that attention should be given also to other industrial and social questions which have been the subject of attention of the International Labour Conference. The obligations assumed by Canada in connection with labour matters under the Peace Treaties were considered at the meeting in September and a resolution was adopted expressing the view that the authorities deemed to be respect-

ively competent to deal with the matters in question should give careful and sympathetic attention to the proposals emanating from the International Labour body with a view to enacting necessary labour legislation where this may be found to be practicable. The resolution also declared that the Federal Government, on request from a majority of the provincial governments, would summon a special conference for the consideration of International Labour Conference matters when this was deemed necessary.

The Prime Minister of Canada in conformity with this last mentioned resolution communicated with the several provincial premiers for the purpose of ascertaining if the provincial governments desired that a conference should be held for this object. It was suggested that the meeting should be held in Ottawa at the end of February or early in the month of March. The replies of a majority of the provincial governments were favourable to the proposed meeting, but it was the general view that the meeting should be held after the provincial legislatures had concluded their respective sessions.

The agenda of the proposed Dominion-Provincial Conference will include the various draft conventions and recommendations of the International Labour Conference which have

found to be within provincial jurisdiction in Canada. It is expected that attention will be given also to the desirability of uniformity in the provincial minimum wage laws.

## LABOUR LEGISLATION IN CANADA IN 1922.

**M**ANY Acts directly or indirectly affecting labour were passed during the year 1922 by the Parliament of the Dominion and by the Legislatures of the provinces. The Council of the Yukon Territory met in regular session but enacted no measures having special reference to labour. The Legislature of the Province of Quebec held two complete sessions, while the Legislatures of New Brunswick and Saskatchewan continued, and completed early in the year, sessions beginning late in 1921. Special sessions were held in July in Saskatchewan and Alberta for the purpose of enacting concurrent legislation necessary to give effect to the Canadian Wheat Board Act, 1922 (Statutes of Canada, 1922, Chapter 14), no other public measures being passed. The following pages summarize the labour legislation of the past year, the laws of the various provinces or the Dominion which deal with similar or related subjects being grouped under subject headings. This summary is taken from a report on Labour Legislation in Canada in 1922, which is in course of preparation in continuance of a series that has been issued by the Department of Labour since 1915.

### *Labour Departments and Bureaus.*—

A Bureau of Labour was established in Alberta (chapter 80), consisting of a Commissioner of Labour with other officers, who will prepare or collect information and statistics affecting labour, administer such acts as may be assigned to the bureau by Order in Council, and discharge any further duties which may be delegated to him by the Minister of Labour. The Manitoba Act of 1915, establishing a Bureau of Labour attach-

ed to the Department of Public Works, was amended (chapter 1) by a provision that the bureau may be transferred to some other department; and in the same province a Department of Public Welfare was created (chapter 2) having a Child Welfare branch. A Bureau of Child Protection was also established in Saskatchewan (chapter 15). A Maritime Fisheries Bureau was created in Quebec (second session), as a branch of the Department of Colonization, Mines and Fisheries, its objects being to promote co-operation among fishermen, and otherwise aid the fishing industry. A Provincial Bureau of Health also was established in Quebec (chapter 20) to administer the Public Health Act, having control over municipal sanitary authorities; and the creation of a Fuel and Foodstuffs Control Bureau to control distribution in times of scarcity was authorized at the second session.

In connection with the Employment Service in British Columbia (chapter 71) the section of the existing Act whereby particular classes of persons may be permitted by the Lieutenant-Governor in Council to operate employment offices for gain, was annulled.

A Bureau of Publications was established in Saskatchewan (chapter 14) to take charge of public libraries, lend books to clubs on the system known as the "open shelf," and prepare moving pictures to illustrate government work and for educational purposes, etc.

*Workmen's Compensation.* — Important amendments were made in the Workmen's Compensation Acts of Nova Scotia, New Brunswick, Ontario, and British Columbia. The Dominion

Parliament (chapter 6) authorized the Governor in Council to issue regulations providing for the payment of compensation for accidents to civilian airmen and others connected with flights undertaken in the public service, and regulations accordingly were issued later in the year. The Minister of Soldiers' Civil Re-Establishment was authorized (chapter 45) to make regulations respecting the payment of compensation for industrial accidents to ex-soldiers, and for the return to Workmen's Compensation Boards of premiums paid by employers of ex-members of the forces.

The Quebec Legislature at its second session authorized the creation of a commission "to inquire into labour conditions in the province with special reference to workmen's compensation," this commission to be composed of five members chosen by the Lieutenant-Governor in Council, two representing labour, two the employers, and a representative of the Government acting as chairman. At the same session (chapter 68) the maximum amount of capitalized allowance for compensation to an injured workman or his dependents was raised from \$2,500 to \$3,000.

In Nova Scotia (chapter 26) the Board was authorized to extend the existing limits of one year for making applications, and of fifteen months for establishing claims, in cases where disability is not apparent within one year of the date of the accident. The board may also withhold payments from workmen who they think are not likely to use the money for the benefit of their dependents. Action may be brought against the executors of a deceased employer in cases of default in assessments. Farm labourers and domestic or menial servants may be admitted to the benefits under the Act on the application of an employer and on conditions imposed by the Board.

Benefits under the New Brunswick Act were extended (chapter 10) to workmen who are paid in the province,

but whose work is partly performed in an adjoining province or country. Further provision was made for orphans who are the sole surviving dependents of a workman.

Ontario (chapter 56) provided for the making of reciprocal arrangements with other provinces in regard to the family of a railway man employed in Ontario and meeting an accident in the province when such family is in consequence of the employee's duties obliged to reside temporarily outside the province. The scale of allowance to surviving orphans was also raised in the event of the death of the other parent.

In British Columbia (chapter 86) office and clerical workers, formerly excluded as not being exposed to industrial hazards, and farm labourers, were made admissible to the benefits of the Act; the list of industrial diseases compensable under the Act was enlarged to include sulphur poisoning contracted in coal mines; the burial allowance was raised from \$75 to \$100; the percentage of average earnings allowed as compensation in cases of permanent total disability, and the percentage of difference between former and present wages in permanent partial disability cases, were both increased from 55 to 62½ per cent. Several changes were made in regard to the provision of medical aid; private systems, where approved, were permitted to continue but employers were made responsible to the board for the proper use of the amounts deducted from wages for the maintenance of such systems. The board was also given power to supervise or directly control existing systems of medical aid. The authority of the board was also extended or confirmed in other ways. Where an accident is attributable to an employer's failure to observe regulations made by the board, the board may require the employer to pay, as a contribution to the Accident Fund, a sum not exceeding

half the amount payable in compensation and in any case not exceeding \$300. Debts to the board were declared to have priority over all other claims excepting only liens for wages, and the decisions of the board were declared final and conclusive and not open to question or review in any court. Another amendment, similar to the provision in Nova Scotia above mentioned, authorized the board to withhold payment of compensation to any person who is judged to be living an immoral or improper life, or is likely to use money in gambling or otherwise than for the benefit of his dependents, and to pay the amount to the dependents instead. During the year the British Columbia Board amended the First Aid Regulations by requiring employers to provide facilities for transporting injured workers to hospital, and that a first aid kit be maintained for the use of each group of less than ten men employed on railways, logging railways, or tramways.

*Arbitration and Conciliation.* — No party to any dispute which has been referred for settlement to a council of arbitration under the Municipal Strikes and Lockouts Act of Quebec, may be represented by a paid agent (second session, chapter 40), and the amount of the fine to which employers causing a lockout are liable was raised from \$100 to \$200 per day. Among several other measures which were struck off the statute books of British Columbia the Labour and Conciliation Act (Revised Statutes 1911, chapter 123) was declared obsolete and no longer in force (chapter 71).

*Minimum Wages.*—Alberta enacted a Minimum Wage Act during the year (chapter 81), being the seventh province of the Dominion to enact minimum wage legislation. The Nova Scotia Minimum Wage for Women Act (1920, chapter 11) and the Quebec Women's Minimum Wage Act (1919, chapter 11), however, have not yet taken effect. The wages and hours of

work of women and young persons in industries coming under the Alberta Factories Act had since 1920 been subject to "investigation and determination" by an advisory committee appointed under the provisions of that Act, but by an amendment of 1921 the power to "determine" wages was withdrawn from this committee. The new Act supersedes the "advisory committee" by a board constituted on similar lines to the boards of Manitoba, British Columbia, Saskatchewan and Ontario. The first orders of the new board were published early in 1923, these orders relating to female labour in the following occupations: manufacturing, laundries, dyeing and cleaning, hotels and restaurants, etc., personal service, offices and shops, stores and mail order houses.

The Ontario Minimum Wage Act was amended (chapter 91) to enable the board to fix the maximum number of working hours per week, as well as the minimum wages, of female employees; rates of wages for time worked in excess of the established maximum may also be fixed by the board. New orders were issued by the board during the year, the series of orders begun in 1921, to govern industrial establishments, being completed; the other orders covered the needle trades, retail stores and telephone operators; tentative scales were also fixed for the textile industries, drugs, toilet articles and cereal industries, and for the sorting and packing of tea.

In Saskatchewan (chapter 72) the authority of the Minimum Wage Board in regard to the fixing of reasonable hours and proper sanitary conditions was made subject to the provisions of the Public Health Act as well as to those of the Factories Act, as already provided. The existing order governing employment in hotels and restaurants in the same province was amended by special regulations in regard to workers employed seven days in the week.

The British Columbia Board reissued during the year the order, first issued in February, 1920, governing the fruit and vegetable industry. The weekly minimum remains as before, but in the new order piece-work rates are so arranged that the total wages earned during any week by an experienced piece-worker shall be not less than the amount of the minimum weekly rate fixed by the order for workers engaged by time. Limits are also set for the duration of emergency work of the kind for which an extension of working hours is permitted.

*Regulation of Factories, Shops, Boilers, etc.*—Amendments were made in the Steam Boiler Acts of Ontario, Saskatchewan, and Alberta, and in British Columbia the Boilers Inspection Act was consolidated and amended. In Ontario (chapter 95) the word steam-boiler was redefined so as to exclude portable boilers rated at 25 horsepower or less and used exclusively for horticultural or agricultural purposes. In Saskatchewan (chapter 69) the chief inspector was given authority, after due notice to the owner, to apply the provisions of the Provincial Act to boilers of less capacity than 2 horsepower. The Alberta amendment (chapter 4) fixed the horse-power capacity of boilers under the Act in relation to superficial heating surface. A number of changes were made in the British Columbia Act (chapter 7) many sections being redrawn and new sections or subsections added.

The Factories Act of British Columbia was amended (chapter 25) in respect to the definition of an inspector under the Act; laundries were required to remain closed on holidays as defined in the Interpretation Act, the fine to which employers violating this provision were liable being raised from \$50 to \$100 for each offense; no prosecution, however, may be instituted without permission from a factory inspector. Under an amendment to the Fire Marshall Act (chapter 26), all muni-

cipalities in the province were permitted to inspect factories and other public buildings, a privilege formerly restricted to municipalities having fire departments; all municipalities were further required to observe the regulations issued from time to time with respect to dangerous trades, the handling of explosives, etc. Sanitary arrangements in shops in British Columbia were brought under the supervision of health officers under the Health Act (chapter 65).

In Quebec, under the Public Health Act (chapter 29) the Lieutenant-Governor in Council was given authority, upon the recommendation of the Board of Health, to issue regulations governing sanitary conditions in industrial and other establishments.

*Safety and Health.*—Several measures were passed for the promotion of the safety and health of workers in addition to those mentioned elsewhere in connection with factory legislation, workmen's compensation, etc. Among these may be mentioned amendments giving the Provincial Board of Health of Quebec (chapter 29) power to make sanitary regulations for store-houses and other buildings not already covered by sanitary regulations under the Public Health Act. In Nova Scotia (chapter 42) the right to enforce compliance with regulations under the Fire Protection Act was permitted to other public officials besides the fire marshal. The Ontario Insurance Act was amended (chapter 61) to allow a change in the classification for insurance purposes of workers changing to more hazardous occupations. Municipal councils in Saskatchewan (chapter 38) were given authority, subject to the provisions of the Factories Act, to require adequate fire protection for all buildings other than private dwellings. In connection with the prevention of industrial diseases, regulations were issued by the Dominion Government under the Animal Contagious Diseases Act governing the importation of foreign hides, skins and by-products

(P.C. 260, February 4, 1922); and governing the importation of foreign wool and hair (P.C. 261, February 4, 1922). Sulphur poisoning contracted in coal mines was added to the industrial diseases covered by the Workmen's Compensation Act of British Columbia.

*Regulation of Mines.*—Amendments tending to further protection for mine workers were made in the Mines Acts of Nova Scotia, Quebec, and Alberta. The Nova Scotia Act was amended (chapter 49), to permit the working of barriers in coal mines when in the interest of safety. A Quebec amendment (chapter 44) prohibited the employment of youths under 20 years of age on mine elevators or windlasses used for hoisting workmen, and of youths under 18 years on any machinery for hoisting, haulage, or drilling blasting holes in mines or quarries or in immediate connection therewith. Mine managers in Alberta (chapter 77) were required, as a condition to obtaining a provincial certificate, to have had two years' practical experience in a coal mine in Canada out of the required total of three years of practical experience in a mine; owners or managers must not attempt to influence the miners in their choice of a checkweigher. Regulations governing the use of electrical power in coal mines were issued during the year under the Coal Mines Regulation Act of British Columbia.

*Wages, Hours of Labour, Pensions, etc.*—Several measures were passed affecting hours of work, rest days, payment of wages and similar subjects, in addition to the provisions already referred to under the headings of minimum wages, inspection of factories, etc. In Ontario (chapter 93) an Act was passed to provide one day's rest in seven for employees in hotels and restaurants which employ more than two persons, the rest day if possible to be on a Sunday; watchmen, janitors, superintendents, foremen and employees working less than five hours daily, are exempted. Auction rooms were ad-

ded to the category of "shops" which, under the City Act of Saskatchewan (chapter 36) may be closed by order of a municipal council after 6 p.m.

The wages of miners in Alberta must, by an amendment to the Mines Act (chapter 77), be paid on alternate Saturdays, or on Friday if the regular pay-day should be a holiday. Provision was made in the same province for the monthly instead of quarterly payment of salaries to school teachers. Municipal councils in British Columbia (chapter 65) were enabled to order the closing of shops on ordinary week days after 5 p.m. instead of after 6 p.m., but the right to petition municipal councils for the passing of an early closing by-law was restricted to merchants who are entitled to vote at civic elections. Manufactured lumber purchased in the ordinary course of business was exempted from seizure under woodmen's liens in British Columbia (chapter 85).

In Nova Scotia the directors of trust companies (chapter 3) and loan companies (chapter 4) were made jointly and severally liable to the clerks and others in their employ for all debts, not exceeding three months' salary or wages subject to certain conditions. Saskatchewan (chapter 25) amended the law respecting attachment of debts in the section governing the amount and payment of costs of legal proceedings. Employees on threshing machines in the same province (chapter 82) were allowed liens for wages due against the unpaid earnings of employers, even when the employee has not been engaged on the particular threshing which entitied the employer to such earnings. In Alberta (chapter 64) the school taxes of employees were made recoverable by the distraining of the employers' property. A number of new provisions were made in regard to the remuneration of school teachers.

In Nova Scotia (chapter 39) the maximum annuity payable to teachers under the Education Act was raised from \$600 to \$1,000. New Brunswick

(chapter 27) created a teachers' pension fund to which teachers are required to contribute 5 per cent of the amount of the Government allowance for teachers, the Government supplementing such payments by a special grant; pensions were limited to \$800 per annum as the maximum, and \$250 as the minimum amount. The Ontario Teachers' Superannuation Act (chapter 98) was amended by the provision of interest at 5 per cent and in other respects. In Manitoba the Winnipeg school district was authorized (chapter 15) to organize teachers' superannuation funds.

The definition of public employees who are entitled to superannuation allowances, under the Dominion Public Service Retirement Act was extended (chapter 39) to include employees working by the hour; civil servants of any age may be retired on showing signs of infirmity or incapacity. A superannuation fund was created in Alberta (chapter 11) for provincial employees, who contribute 4 per cent of their salaries, the Government supplementing these contributions by a like sum and paying five per cent interest on the employees' deposits. The benefits of the Ontario Public Service Superannuation Act of 1920 were extended (chapter 5) to employees retired from ill health.

*Fair Wages.*—The fair wages policy of the Government of Canada was stated in an Order in Council (P.C. 1206) issued in June for the purpose of making uniform the fair wage clauses in contract forms in use in the several Government departments, conditions being laid down for observance, first, by the departments concerned with construction and repair contracts, and second, by those concerned with contracts for the supply of articles manufactured for the use of the Government. A section was added to the Fair Wage Act of Manitoba (chapter 7) requiring that notices of public hearings in connection with the fixing of fair

wage rates shall give full publicity to the proposals to be submitted. Public service appointments in Alberta (chapter 12), except labourers or temporary employees, must be made by the Lieutenant-Governor in Council on the recommendation of the department concerned.

*Voting by Employees.*—The hours of polling in provincial elections in Quebec (2nd session, chapter 19) were extended from 5 p.m. to 6 p.m., factories, shops, etc., being required to be closed from 2 p.m. to 7 p.m. instead of from 1 p.m. to 6 p.m. Municipalities in Ontario (chapter 71) were authorized to fix the voting hours in civic elections from 8 a.m. to 8 p.m. instead of from 9 a.m. to 5 p.m.; in the same province (chapter 73) railway express clerks were included among railway men who are afforded special opportunities for recording their votes at civic and school board elections.

*Licensing of Workmen.*—New enactments in connection with the licensing of workmen were issued in several provinces. A New Brunswick Act (chapter 30) provided for the licensing of scalers engaged in measuring logs cut on Crown lands. Two years' practical experience in mines in Canada was required of candidates for mine managers' certificates in coal mines in Alberta (chapter 77). In Alberta (chapter 37) the term chauffeur was restricted to a person driving a car for hire or wages, such persons being required to carry a license for the current year. New regulations may be issued in New Brunswick (chapter 16) with respect to the qualifications of drivers of pitneys and taxis. Chauffeurs in Quebec (2nd session, chapter 30) were made liable to cancellation of license for the current year on conviction for certain offences. Young persons between the ages of 16 and 18 were prohibited in Ontario (chapter 80) from driving a motor vehicle except with a license. Under regulations issued by the Department of Public Health of New

Brunswick, embalmers were required to obtain a license. Hawkers and peddlers were redefined in Saskatchewan (chapter 60) and British Columbia (chapter 51) in connection with the licensing of these classes by the local authorities. Reciprocal privileges were provided in Prince Edward Island, Nova Scotia, and New Brunswick for nurses who have qualified in other provinces. Quebec and Ontario also made further provisions in respect to the licensing of nurses. In British Columbia licenses were made obligatory for insurance agents.

*Children and Child Labour.* — The laws of Manitoba relating to children were consolidated (chapter 2) and a Department of Public Welfare was established, with a Child Welfare branch. The new Act embodies the recommendations of the Public Welfare Commission appointed under an Act of 1917 with the duty of reporting on conditions affecting child life within the province. A Bureau of Child Protection was established in Saskatchewan (chapter 15), its duties including the administration of the Children's Protection Act, the Juvenile Courts Act, and the Mothers' Allowances Act; the age limit for compulsory school attendance was raised in the same province (chapter 48) from 14 to 15 years, corresponding changes being made in the age limit for the employment of girls under the Factories Act (chapter 68). In Nova Scotia (chapter 39) more stringent rules were made to prevent the employment during school hours of children under 16 years of age in business or street trades.

*Mothers' Allowances.*—A new Mothers' Allowances Act was enacted in Saskatchewan (chapter 73), superseding the Mothers' Pensions Act of 1917. Under the earlier Act the relief of widows unable properly to care for their children was a charge against the local municipal authorities, assisted by special annual appropriations made by

the legislature for this purpose. The new Act, which is administered by the newly created Bureau of Child Protection (chapter 15), provides allowances under a definite system similar to the systems already existing in Ontario, Manitoba, Alberta, and British Columbia; reciprocal action is provided for with respect to beneficiaries coming into the province from other provinces which have made similar provision for mutual benefits.

*Education.* — Several measures were passed for the promotion of general or technical education. The Frontier College, an institution designed to further education with special reference to the training of teachers and social workers, was incorporated by an Act of the Dominion Parliament (chapter 77). Provincial grants were sanctioned in New Brunswick (chapter 5) to provide manual training in public schools. Quebec (chapter 54) provided for the granting of annual subsidies to encourage the maintenance of professional courses in school districts. In the same province (2nd session) provision was made for instruction in paper-making "with a view to recruiting expert workmen and technical men for the manufacture of pulp paper and other fibre products"; also for establishing forestry schools to ensure a supply of officers for forestry protection. Certain sections of the School Act of Saskatchewan (chapter 47) were repealed, including one which made provision for industrial evening schools for giving technical instruction in their trades or occupations to persons employed during the day. Provisions were included in the new consolidation of the British Columbia Public Schools Act (chapter 64) for the establishment of night and technical schools, and night school teachers were exempted from the existing rule which required all teachers to hold teachers' certificates. Some other Acts having reference to education are noted above under the heading "Children and Child Labour."

### *Relief of Unemployment and Distress.*

—Many measures were passed during the year for the relief of distress due to unemployment or other special circumstances. The Speech from the Throne at the opening of the Dominion Parliament in March, 1922, expressed the hope that the conference then being arranged between the federal and provincial authorities would disclose means of more effectively dealing with problems incidental to unemployment, whenever and wherever they may arise. This conference was held at Ottawa in September, representatives of the Dominion, Provincial and local Governments attending, and principles were recommended to public and private employers for their guidance in devising preventive or remedial action in regard to irregularity of employment. The Dominion Parliament provided (chapter 12) for the continuance of the work of the Canadian Patriotic Fund by enacting that when the Governor in Council is satisfied that the resources of the fund are inadequate and that the cessation of the work hitherto done would throw additional burdens or the relief of distress on public authorities, whether Dominion, provincial or municipal, payment may be made from the Consolidated Revenue Fund to the Patriotic Fund of the sums required for the continuance of such work, up to the limit of \$900,000. In Manitoba, where the Patriotic Fund had not been in operation, the work of the fund may be carried on through the agency of societies having similar aims. A Dominion Order in Council (P.C. 863) was issued on April 26 to extend the open season in the lobster fishing industry with the object of alleviating unemployment. Nova Scotia authorized the town of New Glasgow (chapter 73) to borrow money for the same purpose. Municipal councils in Ontario (chapter 41) which had undertaken special unemployment relief work were permitted under certain conditions without the consent of the electors to borrow money by the

issue of five-year debentures. Special acts to provide assistance or relief of local distress were passed in Manitoba, Saskatchewan, and Alberta. Among these Acts may be mentioned the Acts of Alberta (chapter 8) and Saskatchewan (chapter 7) ratifying an agreement made in 1921, following a period of drought and crop failure, between these provinces and the Dominion with respect to the distribution of provisions and fuel; the Drought Area Relief Act (Alberta, chapter 53), applying to the southern portion of Alberta; and Acts passed in Manitoba enabling municipalities to borrow money within prescribed limits, for the purpose of furnishing fodder (chapter 9) and seed grain (chapter 19) to farmers who had recently sustained losses.

*Legislation affecting Returned Soldiers.* — A number of Dominion Acts dealt with matters affecting returned soldiers and their dependents. Further amendments were made (Canada, chapter 38) to the Pension Act of 1919: deserted mothers were classed for the purposes of the Act as widows; bonuses were allowed for the children of pensioned soldiers who died from causes not entitling to pension; pensions were continued to minor children on their mother's death; disability at time of discharge is to be presumed to be due to service; bonus payments ordered in 1921 were continued for another term; all cases hitherto dealt with may be reviewed in connection with these amendments. The Returned Soldiers' Insurance Act (chapter 42) was brought into line with the Pension Act, persons benefiting under the latter Act being limited in respect to insurance benefits. The Department of Soldiers' Civil Re-establishment was authorized (chapter 45) to issue regulations affecting, among other matters, the sheltered employment of disabled soldiers; the granting of burial expenses for those who died in destitute circumstances; provision for unemployment relief; payment of compensation in connection with industrial accidents and re-

turn to Workmen's Compensation Boards of premiums paid by employers. Provision was made (chapter 46) for the consolidation of the debts of settlers under the Soldier Settlement Act of 1919 who have not abandoned their land or terminated their agreements, the consolidated indebtedness to bear no interest.

The next-of-kin of deceased settlers under the Veteran's Land Grant Act of Ontario were (chapter 17) granted rights of settlement under terms similar to those of the original grant. In Manitoba (chapter 27) the benefits granted to returned soldiers under the War Relief Act of 1918 were extended for a further period of one year; while special facilities were created (chapter 20) for the relief of returned men or their dependents from the burden of unpaid municipal taxes. Municipalities in Manitoba borrowing money from the province under the Housing Act of 1919 were enabled (chapter 12) to make advances to totally disabled veterans or their dependents for the purpose of erecting a home, up to the full value of the land and building.

*Co-operation.*—Measures were passed in several provinces for the promotion of co-operation, especially for the benefit of the farming industry. In New Brunswick provision was made for the incorporation of associations for the co-operative marketing of farm products (chapter 34), and for the re-organization of the Farmers' Co-operative Creamery and Maritime United Farmers' co-operative associations (chapters 41 and 57). In Ontario Acts were passed to provide for the incorporation of co-operative credit societies (chapter 64); assisting co-operative fruit-packing associations (chapter 90); increasing the amount which may be loaned to association members for short terms under the Farm Loans Act of 1921 (chapter 37); and incorporating the Ontario Co-operative Dairy Products, Limited (chapter 65). Amendments were made in the Farm Loans

Acts of Manitoba (chapter 8) and Saskatchewan (chapter 55), and in the Agricultural Co-operative Associations Act (chapter 52) and Farmers' Stock Yards Act (chapters 4 and 5) of Saskatchewan. The Co-operative Credit Act of Alberta (chapter 51) and the Co-operative Associations Act of British Columbia (chapter 15) were also amended.

*Housing.*—The Nova Scotia Act of 1919 providing for fair rents and restricting the eviction of tenants for non-payment was amended (chapter 41) so as to continue in force for another year, that is, until April 30, 1923.

The Winnipeg City Charter was amended (chapter 69) to give the city new powers in regard to the passing of housing by-laws.

*Social and Miscellaneous Legislation.*—The province of Quebec (second session) provided for the establishment in times of scarcity of a Fuel and Foodstuffs Control Bureau having power to control distribution, to declare to the public by proclamation the cost prices of commodities under its control, and to compel manufacturers to furnish reports on the amounts of their stock; this Act will come into force on its proclamation by the Lieutenant-Governor in Council. The maximum amount which may be raised in Quebec under the Colonization Loan Act of 1920, for the purpose of assisting colonization, was raised from five to seven million dollars. In British Columbia women were made liable equally with men for service on juries (chapter 38); sons and daughters were made responsible for the maintenance of parents on complaint by the latter before a magistrate (chapter 57); unmarried mothers or expectant mothers were permitted to apply to the Superintendent of Neglected Children who may become the guardian of the child, and a magistrate may, on complaint being made, issue an order against the putative father for maintenance (chapter 9).

## RECENT LABOUR LEGISLATION IN THE UNITED STATES.

---

**A** SUMMARY of the labour legislation enacted in 1922 by the United States and by those states of the Union which held regular or special sessions prior to November 1, 1922, is given in the December issue of the *American Labour Legislation Review*. The laws passed in Louisiana, North Carolina and Oregon, in which states sessions were held late in 1921, are also included. The information in the present article is derived from this summary.

*Workmen's Compensation.* — The largest group of measures described in the report is that classified as Social Insurance, which includes Workmen's Compensation. The United States Congress by an amendment to the Judicial Code, settled a longstanding dispute by establishing the right of longshoremen ("persons other than the master or members of the crew of a vessel") to be included under state accident compensation. In the State of New York, the workmen's compensation law was revised. Among numerous other amendments state commissions were empowered to award compensation for maritime and inter-state commerce accidents if all parties concerned consented to waive any claim to benefit under Federal law. The scope of the act was widened so as to cover a larger number of occupations; the list of occupational diseases was amended by the addition of poisoning by zinc, formaldehyde and hydro-derivatives of benzene, and by the omission of poisoning by African boxwood. Another amendment provided for the establishment of an advisory committee of nine insured employees to supervise the state fund; the time limit for medical care was removed. New Jersey also removed the previous time limit for medical and hospital benefits. In Georgia, the act was amended to provide

that benefits be computed on the basis of earnings at the time of injury instead of on the basis of annual earnings; the "waiting period", or length of time over which disability must extend before a worker is entitled to compensation, was reduced from fourteen to seven days, but compensation is no longer retroactive to date of injury in cases of prolonged disability. Another amendment in the law of the same state provided for the payment to workmen of compensation for injuries resulting from wilful acts of third persons which are directed against employees because of their employment, but if damages are recovered from third persons the amount of compensation is reduced accordingly. In Louisiana, new provisions were made in respect to the settlement of claims by the payment of a lump sum to the workman by his employer, the discount allowed on the amount of such payments being raised from 6 to 8 per cent; the employee was allowed five instead of ten years to protest an unfair lump settlement. The state of Virginia amended its existing act by permitting settlements by lump sum payments after six weeks instead of 26 weeks. In Massachusetts, payments of benefits to the dependents of a deceased worker were limited to 400 weeks; while in Virginia, death benefits to dependents of an employee who had received compensation before his death may extend over a period of only 300 instead of 500 weeks. In Massachusetts a fixed scale of benefits was made to cover such cases, but disability benefits continue to be on the basis of wage percentages. The Maryland Act was made applicable only to concerns operating for gain and to public employment; employees earning annual incomes over \$2,000 were excluded from the benefits of the act.

*Vocational Rehabilitation.*—The Federal Vocational Rehabilitation Act was accepted by the States of Kentucky, Louisiana, Mississippi and Virginia.

*Arbitration and Conciliation.*—South Carolina enacted a law providing that either party to a dispute involving a street railway may in counties containing cities of population between 30,000 to 50,000, force a settlement by a board of arbitration. One arbitrator is to be appointed by each side, and a third elected by these two, or if they cannot agree on any person, the local mayor to serve. If either side fails to appoint its arbitrator it shall be represented by a judge of the Court of Common Pleas. The award of the board is binding unless appeal is taken to the Courts within ten days.

*Wages, Hours, etc.*—South Carolina enacted laws to provide that employees in textile plants be paid during working hours. The working hours of the same class are reduced from 60 to 55 a week and from 11 to 10 a day. The Mechanics Lien Acts of Louisiana, Mississippi, South Carolina and Virginia were strengthened and made applicable to new classes of labour. The United States Congress directed that no funds should be available for War Department officials to make time studies, with stop watches, of the work of employees. Massachusetts provided for the appointment of an unpaid commission of nine to study minimum wage laws and unemployment conditions, including unemployment insurance. Virginia extended the 8-hour day to include children under 16 in all occupations, the working week being limited to 48 hours. With the exception of agricultural occupations, work must be performed between 7 a.m. and 6 p.m. instead of between 6 a.m. and 7 p.m. The compulsory education age in the same state was raised from 12 to 14 years. In Maryland, the lower age limit was extended, the age of compulsory attendance at school being now 7 to 14, instead of 8 to 14. The New

York State laws governing children's employment certificates now apply to children up to 18 years of age. In Virginia, employment certificates are henceforth to be issued by school authorities instead of by notaries, and must be renewed annually. In Massachusetts, scrub women and cleaners regularly employed for at least 6 months in state buildings are granted an annual two weeks' vacation with pay, based on their average weekly wages over the previous six months' period. The United States Congress granted Postal Service employees fifteen days annual vacation with pay and ten days annual sick leave with pay, cumulative for three years. Supplemental salaries were granted to full time civilian employees of the Federal Government, in the District of Columbia, who earn less than \$2,740 a year, with certain exceptions. Employees earning \$2,500 or less receive \$240 but not more than 60 per cent of present incomes, while those over \$2,500 receive sufficient to raise total salary to \$2,740.

*Coal Mining Industry.*—The United States Congress provided for the appointment by the President, with the consent of the Senate, of a paid commission of seven to be known as the United States Coal Commission. The Commission was directed to report on the bituminous industry by January 15, 1923, and on the anthracite industry by July 1, 1923. The questions to be reported on include ownership, organization, prices, profits, cost of production, distribution and waste, as well as wages, working conditions, regularity of employment and strikes. Recommendations are invited as to standardization of the industry, the improvement of labour conditions, and government ownership, regulation, or control of mines. An appropriation of \$200,000 was made for the maintenance of the Commission. The Bureau of Standards was directed to investigate methods of measuring coal dug by miners as a basis for determining wages. In Maryland, a bureau of mines was created in

the State Board of Labour and Statistics, to be headed by a chief mine inspector assisted by two district inspectors. The board will enforce mining laws, issue rules and regulations and assist efforts to reduce waste and increase the safety of mines.

*Immigration.*—The United States Immigration Act of 1921 was extended to

June 30, 1924. This act provides that aliens must have resided in countries adjacent to the United States for five years, instead of one, in order to be admitted without regard to "quota limitations", that is, to the law admitting immigrants of a particular nationality only in a definite ratio to the number of the same nationality already in the country.

## AN APPRENTICESHIP PLAN FOR THE BUILDING INDUSTRY.

**A**T the Fifth Annual Conference of the Association of Canadian Building and Construction Industries, which was recently held at the city of Quebec, a paper was read by Mr. J. M. Pigott, of the Pigott, Healy Construction Company, Hamilton, on "The Shortage of Mechanics and the Cure" in which he outlined a system of Apprenticeship which he proposed for adoption in the Building and Construction Industry. An account of the proceedings of the Conference is given elsewhere in this issue. Mr. Pigott's paper was as follows:

There is no question of greater interest to building employers than the shortage of building mechanics. During the past year, with the slight boom in the building business, we awoke to the fact that by a large percentage we did not have sufficient mechanics to properly carry out the building programme of 1922. According to the figures published, contracts awarded in Canada for 1922 amount to about \$325,000,000. At first glance this would appear to be an exceptionally large year, but further consideration will show you that it has been a very ordinary year. In the first place you must deduct from this total engineering projects, totalling \$120,000,000, residential construction totalling \$104,000,000, and when you have done this you will be surprised to find the total for business and industrial work of just \$100,000,000 as compared with \$102,000,000

in the year before, that is, 1921, and \$147,000,000 in 1920. I am deducting these two classes of work because in the case of engineering projects the number of building mechanics employed is comparatively small and in the case of the residential work it is really outside of our business, and represents, to a large extent, the work of men other than building mechanics.

So that we find that as compared with 1921 and 1920, 1922 is an ordinary year, yet we found everywhere that our volume of business, or the quantity of work we were handling was governed, to a large extent, by the number of mechanics we could get to do the work—and in almost every locality with the possible exception of the west—certainly all throughout the United States and middle and eastern Canada, almost double the number of mechanics could have and should have been used.

If this is the case in a year like 1922, what will you have to face when the building programme of this country is back to the swing of 1911, 1912, 1913 and 1914? According to the contracts awarded in Canada, if the proper allowance is made in the value of the buildings, that is to say, if consideration is given to the fact that materials have advanced 80 per cent and labour almost as much, you will see that in the years mentioned before the war started, we were doing double the work that we did during the last year.

Think seriously, gentlemen, of what your situation actually is in regard to the building mechanics available in 1923.

It is not exaggeration to say that, in spite of all the rosy forecasts for the year 1923, the work which will be done in 1923 depends, not on the willingness of capital to invest, not on our capacity to plan and construct, but absolutely on what the diminishing number of skilled mechanics, in this country can actually do.

Capital may be available everywhere, our plants and organizations capable of almost unlimited work, materials manufactured in anticipation and railroads anxious to have them, unskilled labour willing to work and looking for it, but the skilled building mechanic controls the engine of business, and it will have to be valved down, rationed out as it were, to what he can absorb, to what he and his fellows can do, and no more.

In order to talk intelligently as to the best method of improving this condition we must go very fully into the probable causes of it. We can take, however, one short-cut in this respect, that if we can show that the number of mechanics is not increasing, but on the contrary, decreasing, and if we can show that it is not a matter of the volume of business having outstripped the supply of mechanics, then we know at least that the whole fault lies in the fact that we have failed to train mechanics to supply the demand. This brings us very quickly to the apprenticeship question and the fact that we are in our present difficulty due to the failure of our apprenticeship system, both now and back a great many years.

As to the number of mechanics decreasing, it is very hard to get any reliable data in Canada to support statements in this connection. We have ascertained from the Dominion Bureau of Statistics that in the year 1911 we had a total of 245,990 men in the building trades, which they sub-divide into

the different classifications, among which, for instance, we see that we have 60,203 carpenters, 18,660 bricklayers, stonemasons and stonecutters, 19,865 painters, 5,815 plasterers, 11,244 plumbers. There are no statistics of this kind available since that time. If we turn to the same department, however, in the United States we find that in 1910 they had 169,402 brick and stonemasons, 273,441 painters, 47,682 plasterers, 14,078 roofers and slaters. The figures for 1920 in these same trades showed in the case of brick and stone masons, 131,264, a decrease of 23.6 per cent.; painters in 1920, 248,479, a decrease of 9.5 per cent.; plasterers in 1920, 38,255, a decrease of 19.8 per cent.; roofers and slaters in 1920, 11,378, a decrease of 19.2 per cent. These, of course, are only some of the trades in each case.

In the absence of any figures for 1920 in Canada, I believe it is reasonable to assume that we have, in the case of certain trades at least, fewer mechanics year after year, in particular bricklayers and plasterers, and in the case of many other trades, such as carpenters, while there may not be an actual shrinkage in the available number, there is just as serious a condition in the matter of their skill and efficiency. There are very few properly trained carpenters to-day, and they are getting fewer each year.

Then, as to the volume of business outstripping the supply, I think we have already shown in the first paragraph of this paper that business is far behind what is was either in yearly totals or monthly averages, during the years 1911, 1912, 1913 and 1914.

It is, then, entirely a matter of failure of the Apprenticeship System.

Why has the apprenticeship system failed? There are many opinions as to this. A great many of them, while very reasonable, you will find, on thorough investigation, are not sound.

Apprenticeship is a very old institution. At one time on this continent it undoubtedly flourished. Why did it decline and almost disappear?

A proper study of the question will show and you may be surprised to hear this, that the apprenticeship system has been of little or no use so far as our supply of building mechanics goes, for a generation back. A canvass of the building mechanics who are properly trained will disclose to you a surprisingly large percentage of men who received their training in the Old Country.

But let us go away back as far as we can go to the year, say, 1600. Was there an apprenticeship system then? You will find that there was a very flourishing apprenticeship system. Apprenticeship at that time was the compulsory refuge of the children who became charges on the state. They were not only apprentices, but they were the personal servants and factotums of the men to whom they were apprenticed for usually long terms of years. Then, throughout the seventeenth century, we find apprenticeship, according to authoritative works, flourishing because it was only through apprenticeship that the children of parents in ordinary circumstances could secure an education for their sons. You must bear in mind that our free schools of to-day are institutions which were unknown in the seventeenth century, and education was only for the landed gentry. This was the condition down to and running through the American Revolution. Then we come to what has been referred to by many American writers as "The Industrial Revolution of the United States." This starts at about the year 1800. Paul Douglas, in his authoritative work on the "History of Apprenticeship and Industrial Education," says that right down to the year 1830 "the master worked side by side with his journeymen and his apprentice and was not sharply distinguished from

them by either his earnings or his social position."

The real growth in American industry and the actual Revolution in American industry follows the Civil War, when machinery was introduced in almost all types of manufacturing, and a tremendous development in the industrial life of the States commenced. Hand in hand with this went the exploitation of apprenticeship to the point where it was nothing more or less than Child Labour, and became a menace to the welfare of the people at large. Paul Douglas says: "It is quite clear that it debased the condition of the children in industry in two ways: (a) It divested apprenticeship proper of its educational features both trade and civic. (b) It added children to industry who were not even nominally apprentices, but merely child labour."

It may be interesting to you to know that out of the abuse of the apprenticeship system and the exploitation of child labour at this time was born our trades unions. They were created at this time for the purpose of stopping this abuse—to curb and control the apprenticeship system. Primarily they were seeking to protect their trades, but at the same time no one can deny that they had justice and humanity on their side. The movement developed with great rapidity—trade unions formed in nearly every trade—and joining together through the sixties and seventies, they forced legislation in the States of New York, Massachusetts, Illinois, Pennsylvania and Ohio. These laws made it compulsory to properly indenture an apprentice for from three to five years—he had to be taught every branch of the employer's business, he had to be furnished with suitable clothing, board, lodging, medical attention, and so on—and provided severe penalties for violations.

And, then, we see the pendulum swing to the other extreme. Trade union organization and State legislation soon put a stop not only to the

abuses of the apprenticeship system, but the apprenticeship system itself. As an evidence of how far they went, Mr. Douglas quotes from the *Boston Journal* of July 5th, 1890, which says: "A liberal apprenticeship will do as much as anything else to put a wholesome restraint on Trade Union tyranny and make the mechanic arts again desirable and serviceable to the sons of American citizens."

It would not be correct, however, to say that the Trade Union movement killed the apprenticeship system in the latter part of the eighteenth century. It would be true to say that they campaigned and agitated so vigorously against it, and by law made it a matter of such grave importance and deliberation wherein the employer must needs be ready and willing to teach the boy his whole business, must be ready to see him housed, clothed and fed, and be responsible for his health, that the employer quite naturally, even as you or I would do, turned elsewhere for his requirements. Fortunately for him and unfortunately for us, it was at his hand—immigration flowed into the United States and into Canada, too, and thoroughly trained mechanics from the Old Lands were there ready, trained and willing to work.

Between this immigration and the rapid development of production by machinery the apprenticeship system was killed. While the machines and mass production did not apply as directly to the building industry as to manufacturing, nevertheless because of the abuses of the apprenticeship system already explained, the building trades unions found themselves aligned with the other unions in the struggle for restrictions, and these restrictions, coupled with the fact that building trade mechanics were also pouring in "ready-made," are responsible for the apprenticeship system declining to the vanishing point. There is this difference, however, that while the manufacturing interests could turn to machinery to

help them out, at which almost unskilled men could serve quite satisfactorily, the building industry was dependent entirely on immigration—consequently, when apprenticeship died out (for by 1910 it was almost nil as a result) and when immigration ceased, it did not take many years to bring about a serious condition, and that is the condition that we are in to-day.

It is a difficult thing to decide what percentage of new mechanics should be provided each year to make up the wastage and increased demand. Paul Douglas says unless one apprentice is trained for every four mechanics that a trade loses its vitality and a scarcity takes place.

The unions themselves in their regulations as to apprentices have about one to eight or ten. When apprenticeship was functioning properly it would appear that the ratio—for instance, in the carpentering and bricklaying trades—was at one to five. This is a very important side to the question of the scarcity of mechanics, because we must be careful not to produce an oversupply to the extent that the seasonal unemployment has too serious an effect. For our purpose it would appear to me that we would be setting a mark pretty high and doing very well in fact in the next few years if we achieved a ratio of one to ten in the cities.

A careful survey of the work that is being done now with apprentices clear across the country indicates only too clearly just how stagnant the training of apprentices is and just how serious the situation is. The following cities have turned in reports:—London, Sarnia, Ottawa, Woodstock, Peterboro, Niagara Falls, Winnipeg, Sherbrooke, Toronto, Calgary, Brantford, North Bay, Halifax, Galt, Montreal, Moose Jaw, Saskatoon, Hamilton, Windsor and Quebec. Without going into too much detail, a summary of apprentices in training reported by these places shows:—Masons 59, carpenters, 50, heating and plumbing, 62, plasterers,

23, sheet metal, 32, electrical 42, painting 12, stone-cutting 5.

If we had in training 10 per cent. of the number of mechanics in these various trades, a simple calculation will show that thousands of these apprentices should be at work. For instance, in the bricklaying, masons and stone-cutting trades, according to the 1911 figures, it would require approximately 360 mechanics to replace even the death rate, and the death rate, according to insurance statistics, is only approximately 2 per cent. Think, then, of how ridiculous the figures appear of what is actually being done. I will not draw any figures from the report of our Dominion Bureau of Statistics as to the number of mechanics in the different trades engaged in this country in 1911, because there are several striking discrepancies in these figures which, to my mind, show that they are not reliable. The only figures available which are any guide at all will be found in the publication, "Labour Organization in Canada," issued by the Department of Labour for the year 1921, which states: "It is estimated that the number of Trades Unionists belonging to the United Brotherhood of Carpenters and Joiners affiliated to the Ontario Provincial Council is 7,800. The number of bricklayers, masons and plasterers who are Trades Unionists is estimated at 2,400." If we reach the one to ten ratio in Ontario alone you can readily see that it would mean 1,000 apprentices in Ontario for these few trades alone, and yet for the whole of Canada in these same trades we have approximately 140 boys in training.

Let me quote a few extracts from the reports of the different cities:—

London, Ont.: "The apprenticeship system in this city is practically out of vogue."

Sarnia, Ont.: "The only apprentice is a young man eighteen years of age, whose father is a bricklayer. When the

father is employed the boy goes with him."

Woodstock: "To my knowledge there has not been an apprentice in Woodstock in the last five years."

Peterboro: "It is about twelve years since the last bricklayer and plasterer learned his trade in this city."

Niagara Falls: "The only apprentice I am aware of in Niagara Falls is one bricklayer apprentice."

Sherbrooke, Que.: "There are no apprentices in any of the trades in our city at the present time."

These quotations give a pretty fair idea of the condition of apprenticeship.

It is not necessary to state that contractors have been fully alive to the urgency of apprenticeship training for the past four or five years. There has scarcely been a convention of any kind during that time where that problem has not been dealt with and efforts made to find a solution. Annually committees have been appointed and reports brought in. Standing committees have endeavoured to find the way out. At the Industrial Conference held in Ottawa two years ago some of the best men in the industry worked on this question for four or five days and submitted a report which has been published by the Labour Bureau and has been in circulation from time to time ever since.

The outstanding fact, however, is that with a full knowledge of the urgency, in spite of high wages being paid to the mechanics, the apprenticeship system is in no better condition to-day; in fact it must be clear to you that as a means of adding the the numbers of our building mechanics the present apprenticeship system is an absolute and total failure.

Promising apprentices are not available. For many years the percentage of young men entering high school has been increasing. It has been found, and

is stated by Dr. Merchant, the Director of Industrial Education for Ontario, that generally speaking, the boys entering high school to-day are lost to us, as, by the time they have completed their high school education, they are headed towards the professions. Since the putting into force of the Adolescent Act and the institution of technical schools a sorting out has been attempted, and when scholars reach the age of fourteen or thereabouts an effort is made to interest them in industrial work, and a separation takes place—by far the greater majority going to high school and the balance going to technical school. During the two years that they attend the technical school they are taught subjects which are intended to assist them to choose their vocation when they are sixteen. It is found that of the percentage who choose the technical course, and about two years later decide as to their future training, the number who choose such trades as bricklaying, stone-mason work, plastering and carpentering is practically nil. A small percentage choose some of the inside building trades. So far as Ontario is concerned, the technical schools, generally speaking, are doing nothing in the matter of training building trade mechanics.

You will understand, of course, that in speaking of technical schools I am naturally speaking of Ontario only. It must not be supposed that this is intended as a criticism of the technical schools. They are no more to be blamed for failing to interest these young men that we are. After all is said and done, the technical schools are conducted to meet the demands of the locality in which they are built, and if their wood-working stands idle, if no classes exist in the bricklaying, plastering or any of the trades of that class, it merely goes to support the statement that building trade apprenticeship does not appeal to the young man or his parents.

Why is this?

Of your own experience you know that apprentices taken on in the spring or summer can be carried through on the work in which they are interested to about the 1st of December. About this time, or shortly after, these boys are either laid off and are thrown back on the hands of their parents to be supported for about five months, in which case they generally go into other work, and the employer's money and the boy's time has been wasted, or they are kept on at odd jobs of a labouring nature at the contractor's expense until the spring. This condition is due entirely to the seasonal nature of the building business, it is no wonder that parents endeavouring to have their boys trained in the building trades become discouraged and that others are prevented by what they see from making the attempt. On the other hand, the employer who has trained apprentices during the past few years has seen his work and the investment he has made in the apprentice either lost through the apprentice going into other work, or if he has kept him on, has seen him at the completion of his apprenticeship period striking out for the first employer who will pay the highest wages. Because of this feature, it is difficult to interest employers in the taking on of apprentices. They feel—and feel rightly—that the training of mechanics is as much their competitors' business as it is theirs.

This is the whole trouble of the apprenticeship system to-day. It is wrong in principle. The training of building mechanics is a matter for the trade at large, to be paid for by the trade at large. On the other hand, the apprentice has got to be sure of steady employment at the trade he has chosen and at steady pay. If we can bring these two conditions about I am satisfied that apprenticeship in the building trades will be sufficiently attractive to provide us with a proper supply of young men.

We are given plenty of instances of trade schools being established, particularly in the United States. I have examined many reports on these trade schools, such as exist in Cleveland, Chicago and San Francisco, and I am convinced that while they may do some good, their efforts will barely scratch the surface and the output of such institutions will have little effect on the shortage. In addition to this, they are the result pretty largely of labor difficulties with trade unions and are very temporary in character.

Dr. Merchant, Director of Technical Schools in Ontario, who has made a keen study of the training of youths in industry, had this to say in a recent report which he delivered on the subject: "But in this respect schools have their limitations. I have observed with a great deal of interest during the last ten years the development of our own schools, and I have had the opportunity of studying at close range the operation of the most important trade schools in Europe, and I am convinced that a school cannot alone equip fully a youth as a journeyman in any trade. I am convinced, also, that some form of apprenticeship should be restored in which the school and the shop or the job both take a part in the training of apprentices."

We also have seen in the State of New York and in the State of Wisconsin definite plans for apprenticeship introduced. In the State of New York, following the Lockwood investigation, the Building Congress took place and out of this developed a comprehensive apprenticeship programme. I have the indenture papers and the courses laid out by educational experts for the training of these boys. I personally investigated the working of this plan. I have with me a particularly fine indenture agreement and vocational course as laid down by these experts for carpentry apprentices, which has been worked out at great expense and much effort on the part of enthusiastic employers and

their friends assisted by the Trades Unions, and I can state authoritatively that not one single boy is taking this course. In Wisconsin they have enacted legislation which you will see quoted and held up as a model arrangement. As a matter of fact, an investigation will show that in spite of the most energetic efforts on the part of this organization in the whole State of Wisconsin, in July, 1922, exactly 172 apprentices in all of the building trades combined were in training.

What then is wanted? It is quite evident that apprenticeship must be a combination of work at the trade under actual building conditions and technical training, with a certain amount of general education in technical schools or some such similar institutions. We can employ apprentices on the building operations for seven months; for the other five months these boys should receive their technical training and general education in the school. For instance, take a class of 50 boys: start them in at a technical school on the 1st of December; turn them out on the 1st of May to be farmed out on the different construction jobs and kept at work under actual building conditions until the 1st of December, then back to the technical school on the 1st of December until the 1st of May. A proper supervision of this apprenticeship during the outside period would give a sufficient variety of work and working conditions to push the boy along in his training to the best advantage.

The system necessarily can only be adopted in centres large enough to absorb at least a proper class of these boys in the different trades. Careful attention will be necessary on the part of the educational authorities and the trades unions and the employer through a small local board to keep the boys in training at the different trades in the proper proportion to the mechanics.

To my mind, the most satisfactory way of conducting this work would be by a blanket agreement between the trade unions through their Building Trades Council and the Builders' Association, with the technical school as sponsors for the boys as the third parties.

The second part of the system would be the payment to these boys in these trades of \$500 a year. That this money be derived from the employers by special assessment by exactly the same means as the Workmen's Compensation funds are collected in Ontario, that is, a percentage on the pay-roll. This may sound somewhat radical, but I believe it is entirely practical.

It is not many years ago in Ontario when we carried our own workmen's compensation. We either carried the risks ourselves or we went to an insurance company. Many accidents occurred where the loss was so great as to put the employer out of business, yet it was not his fault. In many instances the injured workmen lost their compensation or got but a small portion of it, yet this was not their fault. Injuries to workmen and compensation itself was one of those things which grew out of the nature of the business. In spite of all precautions, accidents would occur. The Ontario Government rightly decided that there was something that in justice to all should be borne by the trade at large. The Workmen's Compensation Board of Ontario is an accomplished fact, and there is no finer institution in the business to-day. We are getting good administration; we are free of the risk; the men are sure of proper compensation from the trade as a whole, and the public pays for it.

Is the shortage of building mechanics not just as vitally a matter for the trade at large? Is it not in the public interest? Is it not something for which the public should pay, just as they do now in connection with Workmen's Compensation?

The figures for the Workmen's Compensation for the year 1922 are not yet published. The figures for 1921 for Ontario for Class 24, which is our class, which covers brickwork and stone masonry, lathing and plastering, carpentry, electric wiring, plumbing and heating, painting, sheet metal work and general construction, show that on an assessment of 2 per cent on pay-rolls totalling \$18,750,000, the sum of \$375,000 was collected that year. If this rate were 3 per cent, \$186,000 more would be collected. The addition of 30c to the rate of 1921 on the pay-rolls of that time would produce \$56,000. The rate last year for this class was \$1.80. A 30c increase would give us a rate of only \$2.10, yet it would produce \$56,000. The important point to be borne in mind is that the 2 per cent of 1921 or the \$1.80 of 1922 was figured in the cost estimates of our tenders just as carefully and surely as the lumber, brick and cement. One hundred and fifty thousand dollars in the Province of Ontario would place in training 300 boys; 150 of these boys might be considered as being added to the ranks of the mechanics each year. I do not mean by this that the period of apprenticeship might be cut down to two years. The period of apprenticeship is a matter to be arranged between the trades unions and ourselves, but no matter what the arrangement is, I am satisfied that with the intensive training that the boys will receive that they will be of great help in their second year.

The proposal, however, is that for the time being, and in order to introduce and perfect this system, that the Provincial and Dominion Governments be asked to bear the burden of this with the employers equally. If this was done, the 30c increase to the rate of the Province of Ontario Workmen's Compensation would not be felt by the employer and it would raise their quota. Ultimately the trade should stand the expense—every trade controlling the

number of apprentices and being called upon to pay only its proper share.

When it is borne in mind that the compensation rates in Ontario are less than one-half the rates of any of the States across the line that I am aware of it will be readily seen that we have plenty of money to take care of this problem of ours without inflicting a burden upon the industry.

So far I have dealt with this problem pretty much as I see it in relation to the Province of Ontario. I see no reason, however, why the same methods should not be applied to the other provinces; in fact it is most desirable that what one province does the others should do in like manner.

We have been confronted each winter for the past few years with the problem of the unskilled unemployed, and we have seen many hundreds of thousands of dollars expended in practically every Canadian city in relief. A large part of this unemployment is due in the first place to the shortage of building mechanics or skilled men during the open building months, when many more unskilled men might have been employed had we had mechanics. Apart altogether from this, a large percentage of these unemployed are unemployed because they have no trade, for have we not on the one hand an over-

supply of unskilled men at too low a wage to maintain them through the winter, and on the other hand a shortage of men at too high a rate in comparison?

Except as an emergency programme, the importing of skilled mechanics from other countries is not sound economy; what we should have in this country is the training of our own boys.

Immediate steps should be taken, in my opinion, to secure the co-operation of the trades unions, for I believe the time has come in our industry when there are many things of this nature in which our interests are more or less identical, where we should work in closer harmony for the benefit of all. In the matter of apprenticeship I am sure we will obtain help and co-operation of real benefit from organized labor.

If this plan, in your opinion, offers a solution to the apprenticeship problem, no time should be lost in securing the necessary machinery for its operation. How this is to be brought about circumstances will have to dictate, but this Convention should not adjourn before a definite programme is laid down with instructions as to how it is to be followed out either for this plan or such an amended one as may be decided upon.

---

## APPRENTICE TRAINING IN GRAND TRUNK RAILWAY SHOPS.

THE system of apprentice training followed in the Grand Trunk Railway shops was described by Mr. J. C. Garden, superintendent of motive power for the Grand Trunk Railway, in an article contributed to *Canadian Machinery and Manufacturing News* for December 28, 1922. (Some account of apprentice-training on this railway was given in the *LABOUR GAZETTE* for July, 1921, on page 895. An account of the system of apprentice-training followed on the western lines of the Canadian National

Railways appeared in the December, 1922, issue of the *LABOUR GAZETTE*.) Mr. Garden's article is reproduced in part below:

"The systematic education and training of apprentices was first started by us in a general way about twenty years ago, and as experience in this line was gained, improvements were made and the system was gradually extended, until at the present time the boys entering the employ of the Grand Trunk Rail-

way as apprentices are given every facility to become proficient in their respective trades.

"The vice-president and general manager, W. D. Robb, who himself was an apprentice, as superintendent of motor power, inaugurated the system, and is still very active in its development, and his efforts in this direction are ably supported by the heads of the motive power and car departments.

"The organization for handling the apprenticeship system is as follows:

"The general superintendent of motive power and car departments is the officer in general charge of the work, and he decides the policy to be followed. The mechanical and electrical engineer, who reports to the general superintendent of all the detail work, and to him the supervisor of apprentices motive power and car departments, has immediate charge of reports.

"The supervisor of apprentices visits all classes regularly and deals with matters of discipline, arrangement for classes, methods of construction and revision of text books. He also attends to the organization of athletics among the apprentices. Leagues are formed among the different stations, both in baseball and hockey, which create a great deal of interest and tend to promote a good feeling among the boys. The company grants free transportation to teams for out-of-town games.

"There are six main stations where permanent instructors are employed, who devote their entire time to the work, and there are also three travelling instructors, each having seven stations which are visited regularly each week to give instruction to the apprentices. An apprentice examiner, who examines all apprentices on the system semi-annually, for increases in rate, and who devotes all his time to this work, reports to the supervisor of apprentices.

"The annual report of the supervisor of apprentices gives a detailed account

of the work done throughout the year, including the examiner's report of examinations at each station. These results considered as a basis of competition, show the comparative standing of the different stations. A diploma is given to the station obtaining the highest average.

"The applicant for an apprenticeship course must be between the ages of sixteen and twenty-one, and must write a letter of application, which serves as an examination in writing and spelling. He must also pass a physical examination by the company's doctor and a mathematical examination in the simple rules of arithmetic. Knowledge of elementary mechanics is also helpful.

"The following are offered to G.T.R. apprentices: Motive Power Department: machinists, boilermakers, blacksmiths, patternmakers, moulders, electricians, tinmiths, pipefitters, toolmakers, air brake mechanics, millwrights; Car Department: freight car builders, coach body builders, carpenters, wood machinists, painters, blacksmiths, machinists, cabinet makers, tinmiths, steam fitters and plumbers, electricians, brass finishers.

"If the applicant is successful in his examination, he is sent to the shop and placed on a simple machine, such as a nut facer, or centring machine, and is looked after by the shop instructor. He remains on this machine until he has mastered its operation, or until the instructor is satisfied that he is qualified to pass on to another machine.

"Skilled instructors are employed in each main shop whose duties are to move the boys from one machine or class of work to another, at the required time, and to follow each move up in order to assist him in his new work, and to keep record of all shifts for future reference. The instruction in the shop is supplemented by a text book on shop practice, which is supplied without charge to the apprentices on entering the service. This book contains a series of questions and answers applicable to each year of

apprenticeship term, and examinations include this work.

"It is found that a large number of applicants choose the trade of machinist, and the following shop schedule will give the reader an idea of the opportunities afforded the average apprentice to learn this trade insofar as shop instruction is concerned: Machine Shop: nut facer, centring on screwing machine, 3 months; drills, 3 months; slotter or milling machine, 3 months; boring mills, 3 months; shaper or planer, 3 months; bolt lathes, 3 months; general lathes, 6 months; rod bench, 3 months; motion bench, 3 months; air brake, 3 months; Erecting Shop: eccentrics, 2 months; shoe and wedge wheels, 3 months; guide bars and steam chests, 3 months; frames and cylinders, 3 months; brakes and spring gear, 3 months; motion, 4 months; trimming, 3 months; front end, 3 months; boiler mountings and super-heater equipments, 3 months. Total 5 years.

"Instructions pertaining to the different trades are given in the class rooms to all apprentices. These classes are held during working hours and the apprentices are paid for their time while attending them, receiving instruction for a period of two hours each week. All equipment is supplied by the company gratis, with the exception of drawing instruments, which are purchased in large quantities and sold to apprentices at wholesale prices. The subjects taught are as follows: Mechanical drawing, sketching, mathematics, practical mechanics and blueprint reading.

"The first year apprentices take up simple mathematical problems. They only touch upon the subject of mechanical drawing, but study the essential subjects leading up to it, such as geometrical constructions, elementary, solid and descriptive geometry to such an extent as to lay a good foundation for future work and give the apprentice practice in the use of drawing instruments. The second year apprentices take up mechanical drawing and more

advanced work in mathematics, geometry and projections. They make free-hand sketches of simple models and from these make drawings to scale. The apprentices in the last three years take up more difficult work in mechanical drawing and mathematics with its allied subjects, specializing more in the details most essential to their respective trades. The making of freehand sketches and drawings to scale are continued, the proper relation of the different views to one another being particularly brought out. The more advanced work in mathematics required in machine design and applied mechanics is here introduced.

"To aid the instructors and to make instruction uniform over the whole system, in addition to the text book of questions and answers on shop practice, text books have been prepared in mathematics and drawing. The mathematical text book is divided into ten sections, each representing a six-months' period of the apprenticeship term. Each apprentice is required to at least reach the successive stages as his term progresses. The drawing book is particularly adapted to motive power and car department apprentices. The course as presented has been carefully prepared. By working out all the problems and doing the exercises in the order given, the apprentice is brought to a stage where he is able to make his own sketches and drawings, read working drawings and understand all blue prints.

"It is necessary for all apprentices at the completion of each six-months' term to pass an examination on the subject taught, before being advanced in rate of pay. These examinations consist of questions relative to shop work, mechanical drawing and mathematics, the marks for shop efficiency being allowed by the foreman. The time allowed for this examination is eight hours and the apprentice must obtain an average of fifty per cent in each subject, otherwise he must take the examination again in the course of a month.

"A feature appreciated by the parents is the quarterly report. These reports are compiled by the instructor, and sent to the parents of the apprentices, showing them the progress the boys are making in the shop and in the class room, also the number of hours absent from work and the wages earned each period. These reports are returned to the shop superintendent with remarks from the parents.

"When the apprentice has satisfactorily completed his course of five years, he is given a certificate of apprenticeship, which shows that he is a qualified mechanic in his particular line.

"Apprentices have the privilege of attending the first aid classes which have been developed on the Grand Trunk Railway System. Instructions and demonstrations are given in these classes by competent men and valuable knowledge can be gathered, which is beneficial to anyone in case of emergency.

"The apprentices of the Grand Trunk Railway System have for the last number of years taken part in the Mechanical Drawing Competition at the Canadian National Exhibition, and have been very successful in capturing prizes, taking seven out of ten in 1921 and seven out of ten in 1922.

"The apprenticeship system of the Grand Trunk Railway System stands as an example of the best that can be offered in systems of its kind, and every effort is made to keep it up to a standard commensurate with the great importance of the work it is doing.

"The very satisfactory results obtained by the Grand Trunk and the interest shown by the apprentices are clearly brought to evidence by the fact that the management is seldom obliged to go outside of its own shops to fill a vacancy in the mechanical department, and many of the highest positions in this department are now filled by men who started with the company as apprentices."

---

## ANNUAL REPORT OF SASKATCHEWAN BUREAU OF LABOUR.

THE second annual report of the Bureau of Labour and Industries of Saskatchewan covering the year ended April 30, 1922, has recently been received. The report also contains revised figures with respect to the lumbering industry for 1920 and figures covering the flour milling industry for 1920.

In the lumbering industry in 1920, 5 logging plants and 27 sawmills were in operation. The capital invested in forest operations was \$33,490 and in mill operations, \$2,077,277. The total salaries and wages paid in logging operations was \$428,693 and for sawmill operations, \$576,111. In the flour milling industry 45 mill were operating with a capital investment of \$4,304,904 and 620 employees whose earnings amounted to \$807,800. The duration of operation of these mills shows a total of 7,676 days averaging 170.58 per mill with 9.66

hours per day and 57.90 per week. The cost of materials amounted to \$14,962,761 and the value of the product to \$17,053,491.

The output of coal for 1921 was 336,071 tons from 52 mines employing on an average 432 men per month ranging from 308 in July to 612 in November. Many of the smaller mines cease operations from about April 1 to October 15 in each year when there is little demand for the product, but the larger mines continue to operate whole or part time throughout the entire year. The Lignite Utilization Board of Canada commenced operations at their plant which has a capacity for the manufacture of 30,000 tons of briquettes a year. A preliminary report of the manufacturing industries shows 1,534 establishments operating with a capital investment of \$35,869,588 and 9,477 employees earning \$11,436,-

974. The cost of materials was \$36,937,-613 and the value of the products, \$59,-752,486. The value of construction work started during the year was \$3,-964,187, as compared with \$11,573,026 in 1920. The value of the fish production for the year was \$237,632, and the value of the fur catch during the season 1920-21 was \$717,149. Particulars with respect to hourly rates of wages and hours of labour per week in various industries in Regina for 1920 and 1921 are given as follows:

Industry	Wages		Hours	
	1920	1921	1920	1921
	\$	\$		
<b>Building Trades:</b>				
Bricklayers .....	1.25	1.15	44	44
Carpenters .....	1.00	.85	44	50-55
Electrical workers .....	.90	.90	48	44-49
Painters .....	.87½	.82½	44	44
Plumbers .....	1.00	.90	44	44
Stonecutters .....	1.00	1.00	44	44
Builders' labourers .....	.55	.45-.55	54	55-60
<b>Electric Street Railway:</b>				
Conductors and motormen	.55	.55-.65	54	*54
<b>Metal Trades:</b>				
Blacksmiths .....	.85	.60-.85	44	44-55
Iron moulders .....	.78	.78	50	50
Machinists .....	.90	.75-.90	50	50
Sheet metal workers .....	.80	.80	50	49
<b>Printing Trades:</b>				
Hand compositors, newspaper offices .....	47.00	\$43-\$47	48	44-48
Cylinder pressmen, job offices .....	42.00	\$40-\$46	48	44-48

\*Work 9 hours per day, paid for 9½ hours.

The immigration to Saskatchewan during 1921 amounted to 10,946 as compared to 13,643 in 1920. The total immigration during the past ten years was shown as 184,866.

There were 466 factory inspections made during the year and 57 recommendations issued. In regard to elevator inspection, there were 447 inspections and 541 recommendations. The report states that a number of changes have been made in the regulations for ensuring safety in regard to elevators in accordance with an order-in-council of July 1922.

The report on industrial accidents shewed 20 fatal, 41 permanent and 784 temporary accidents, causing a time loss of 16,284 days. In the previous year there were 14 fatal and 1,106 non-fatal

accidents. An analysis of the time in which the accidents occurred shows that 292 out of 845 took place between 7 and 11 a.m. as compared with 209 in the next four hours and 189 between 3 p.m. and 7 p.m., and of the days of the week Monday and Tuesday with 156 and 157 accidents respectively had the greatest number of accidents. In the analysis by months, October, November and December showed the largest number of accidents, the increases being chiefly among railway employees. According to the age of persons injured, the greatest number of accidents occurred to persons between 30 and 40 years.

A section of the regulations of the Minimum Wage Board was amended to require every employer of female labour to keep a copy of regulations respecting Orders of the Board posted in such a position that they can be easily read by female employees. A further amendment was made by the insertion of a clause requiring every employer of female labour to keep a register of female employees and to permit any member or representative of the Board to inspect and examine the same. As a result of representations to the Board that the wages and hours governing employees in hotels, restaurants and refreshment rooms were unsatisfactory, a public meeting was held, to which all interested persons were invited, after which, while no change was made in the minimum rate set for a six day week, the hours were changed from 48 to 50, and instead of paying overtime for a seven day week, a fixed rate of \$2.50 was set for employees working the seventh day. An investigation was made by the Bureau to ascertain whether the minimum wage regulations were responsible for any of the unemployment. Statistics secured in the year 1919 from 96 stores, factories and laundries in the cities of Saskatchewan as compared with those for 1920 showed 1,002 female employees in 1919 and 856 in 1920. A comparison of statistics of hotels, restaurants and refreshment rooms for 1920 and 1921 showed only eight less female employees in 1921.

It is stated that, allowing for business depression, it would appear that there was no perceptible decrease in female employment. During the year, 209 recommendations affecting working hours, wages, working conditions, keeping of registers and posting of regulations were issued, of which 101 were put into effect. There were issued 52 overtime permits covering 921 days and affecting 40 establishments, of which 31 were issued to shops and stores (mostly during the Christmas season), 19 to laundries and factories, one to a mail order house and one to a restaurant. Special licenses were issued to five employees. Two prosecutions were made for infractions of regulations under The Minimum Wage Act. The personnel of the Board at the close of the year consisted of: Mr. W. F. Dunn, chairman; Mrs. A. M. Bothwell, and Mr. J. A. Regan, three members having resigned during the year. Mr. Thomas M. Molloy, Commissioner of Labour and Industries is secretary.

The report of the employment service shows that during the fiscal year, there were registered in the province about 78,000 applications for work, 87,700 applications for help from employers, and there were made 69,045 placements. The greatest activity was in the agricultural group in which industry 48,530 placements were recorded. In the harvest season 35,764 men were brought into the province, and to enable these men to be

on hand for the threshing period the government provided sleeping accommodation and meals at a total cost of \$674.94. The rate of wages agreed upon by officials of organized farmers' associations of Alberta, Manitoba and Saskatchewan at a conference on March 6, 1921, was well maintained, \$60 per month with board and lodging being the accepted wage in most cases. Under the assisted passage scheme 393 girls were brought into the province during the fiscal years 1920-21 and 1921-22 to supply the need for domestic labour. The twenty-four hour rest period for these workers immediately following their arrival at the Canadian Women's Hostel, Regina, was increased to 48 hours. In February 1922, the Teachers' Exchange, formerly a branch of the Department of Education, was taken over by the Bureau of Labour and Industries, and operated as a professional branch of the employment service. During the three months' operation 735 teachers registered, 312 school trustees notified vacancies, and 144 placements were made. A total of 17,100 certificates were issued for unemployment relief during the winter 1921-22 in the various centres where relief was available.

There were seven disputes affecting 221 employees in the province during 1921 as compared with two disputes affecting 100 employees in the previous year.

---

## ORIENTAL LABOUR IN BRITISH COLUMBIA LUMBER CAMPS.

Judgment of Judicial Committee of the Privy Council.

ON February 19, in the case of Brooks-Bidlake and Whittall, Limited, vs the Attorney General and the Minister of Lands of British Columbia, an important judgment was delivered by the Judicial Committee of the Privy Council respecting the power of the Government of British Columbia to stipulate in timber licenses that no Chinese or Japanese shall be employed

by the licensees on the crown lands covered by the licenses. The judgment delivered by the Lord Chancellor was as follows:

This is an appeal by the plaintiffs in the action, from a judgment of the Supreme Court of Canada, which reversed a judgment of the Supreme Court of British Columbia and dismissed the plaintiffs' action. The substantial question to be determined is whether

the appellants are entitled to a renewal of certain licences to cut and carry away timber from lands belonging to the Province of British Columbia.

The appellants and their predecessors in title were for some time the holders of special timber licenses granted by the Minister of Lands of British Columbia under the authority of the Land Act of that Province, enabling them to cut and carry away timber from certain lands belonging to the Province. Each of these licences was granted for a year only, but under section 57, subsection 3 (a) of the Land Act a licence was renewable from year to year if the terms and conditions of the licence had been complied with. Each licence contained a stipulation in the following terms:—

“N.B.—This licence is issued and accepted on the understanding that no Chinese or Japanese shall be employed in connection therewith.”

This stipulation was inserted in compliance with Orders of the Lieutenant-Governor in Council dated May 26 and June 18, 1902. The stipulation had not been observed by the appellants, but the licences were nevertheless renewed or treated as renewed on the same terms in every year down to and including the year begun on February 11, 1920. On November 16, 1920, the Court of Appeal for British Columbia, on a reference by the Lieutenant-Governor in Council, held the stipulation to be unauthorized and invalid, partly on the ground that it conflicted with section 91 (25) of the British North America Act, by which the exclusive right of legislation with reference to naturalization and aliens was reserved to the Dominion Parliament, and partly on the ground that it was repugnant to a Dominion statute, the Japanese Treaty Act, 1913, by which it was declared that the treaty signed on April 3, 1911, between his Majesty the King and the Emperor of Japan, under which the subjects of the high contracting parties were “in all that related to the pursuit of their industries, callings, professions, and educational studies,” to be placed in all respects on the same footing as the subjects or citizens of the most-favoured nation, should have the force of law in Canada. Notwithstanding this decision, the licences were renewed to the appellants in February, 1921, for another year on the same terms; and by the Oriental Orders in Council Validation Act of British Columbia, passed in April, 1921, it was declared that the Orders in Council and the stipulation were valid, and had the force of law, and that the violation of any such stipulation in any in-

strument should be sufficient ground for the cancellation of that instrument.

On September 3, 1921, the appellants began this action in the Supreme Court of British Columbia against the Attorney-General for British Columbia and the Minister of Lands, claiming a declaration that, notwithstanding the stipulation, they were entitled to employ Chinese and Japanese on the timber lands, and an injunction restraining the defendants from interfering with the enjoyment by the plaintiffs of their licences. On an interlocutory motion for an injunction in the above terms, Mr. Justice Murphy, holding himself bound by the decision of the Court of Appeal of British Columbia, granted the injunction. The defendants (by consent) appealed against this order directly to the Supreme Court of Canada. While the appeal was pending, the Governor-General in Council referred to the Supreme Court of Canada the general question whether the Oriental Orders in Council Validation Act was in excess of the powers of the Legislature of British Columbia; and the Supreme Court, having before it both the general reference as to the validity of the Act of 1921 and the appeal of the defendants in this action, heard both matters together, and on February 7, 1922, gave successive judgments in both.

On the general reference, the Supreme Court by a majority, answered the question put to them in the affirmative; but the reasons given for this decision varied and the result was to leave the law in some doubt. The case was heard by a full Court consisting of Chief Justice Davies and Justices Idington, Duff, Anglin, Brodeur, and Mignault, and of these, three (Chief Justice Davies and Justices Anglin and Mignault) held the stipulation void under section 91 of the British North America Act, and two (Chief Justice Davies and Mr. Justice Duff) held it to be invalid as conflicting with the Japanese Treaty Act. Mr. Justice Brodeur, while holding the Provincial statute to be invalid as regards Japanese subjects on account of the Japanese Treaty Act, held it valid as regards Chinese. The remaining Judge (Mr. Justice Idington) held the stipulation to be wholly valid. The Court then proceeded to give judgment on the appeal in this action, and unanimously allowed the appeal and dismissed the action, mainly on the ground that, even though the condition as to not employing Oriental labour was void, it could not be struck out of the licence, and the right to renewal, being founded on an illegal condition, must fail. Thereupon the present appeal was brought.

The points raised for consideration are two, viz:—(1) Was the stipulation against employing Chinese or Japanese in connection with the timber licences valid or was it wholly or partly void as conflicting with (a) the British North America Act, or (b) the Japanese Treaty Act of the Dominion; and (2) if the stipulation was void, were the appellants entitled to a renewal of their licences? The threat to cancel the licences as existing on August 24, 1921, is no longer material, as those licences would in any case have expired on February 11, 1922. It is the right to renewal which is now the substantial issue. Their Lordships will deal first with the contention that the stipulation is void as conflicting with the British North America Act, 1867. It is said that, as section 91 (25) of the British North America Act reserves to the Dominion Parliament the exclusive right to legislate on the subject of "naturalization and aliens," the Provincial Legislature is not competent to impose regulations restricting the employment of Chinese or Japanese on Crown property held in right of the Province. Their Lordships are unable to agree with this contention. Section 91 reserves to the Dominion Parliament the general right to legislate as to the rights and disabilities of aliens and naturalized persons; but the Dominion is not empowered by that section to regulate the management of the public property of the Province or to determine whether a grantee or licensee of that property shall be permitted to employ persons of a particular race. These functions are assigned by section 92 (5) and section 109 of the Act to the Legislature of the Province; and there is nothing in section 91 which conflicts with that view.

In *Union Colliery Company of British Columbia v. Bryden* (L.R. 1899, A.C., 580; 15 The Times L.R., 508) this Board held that a section in a statute of British Columbia which prohibited the employment of Chinamen in coal mines underground was beyond the powers of the Provincial Legislature; but this was on the ground that the enactment was not really applicable to coal mines only—still less to coal mines belonging to the Province—but was in truth devised to prevent Chinamen from earning their living in the Province. On the other hand, in *Cunningham v. Omei Homma* (L.R. 1903, A.C., 151; 19 The Times L.R., 126), where

another statute of British Columbia had denied the franchise to Japanese, the Board held this to be within the powers of the Provincial Legislature, which had the exclusive right to prescribe the conditions under which the Provincial legislative suffrage was to be conferred. And in *Attorney-General for Canada v. Attorney-General for Ontario and Others* (L.R. 1898, A.C., 700; 14 The Times L.R., 106) it was held that the reservation to the Dominion Parliament by section 91 (12) of the Act of 1867 of the right to legislate as to "sea coast and inland fisheries" did not prevent a Province in which a fishery was vested from settling the conditions upon which fishing rights should be granted. To the same effect is *Attorney-General for Canada v. Attorney-General for Quebec* (L.R. 1921, 1 A.C., 413; 37 The Times L.R., 125.) In their Lordships' opinion, the present case falls within the principle of the authorities last cited and not within *Bryden's* case, and accordingly the stipulation in dispute is not void as contrary to section 91 of the British North America Act.

This conclusion is sufficient to dispose of the present appeal. Each licence is issued on the understanding that no Chinese or Japanese shall be employed in connection therewith; and the appellants' right to renewal is contingent on their complying with this stipulation. It appears from the indorsement of the writ in this action as well as from para. 5 of the affidavit filed by the appellants in support of the motion, that they have employed and claim the right to employ both Chinese and Japanese labour. Now, whatever may be said as to the stipulation against employing Japanese labour, there is nothing (apart from the British North America Act) to show that a stipulation against the employment of Chinese labour is invalid. The stipulation is severable, Chinese and Japanese being separately named; and the condition against employing Chinese labour having been broken, the appellants have no right to renewal. On this point their Lordships agree with Mr. Justice Brodeur. Having regard to these considerations the point raised on the Japanese Treaty Act does not arise and their Lordships think it unnecessary to deal with it. They will humbly advise His Majesty that this appeal fails, and should be dismissed with costs.

## UNITED STATES SECRETARY OF LABOUR DISCUSSES CHILD LABOUR PROBLEM.

---

**T**HE annual report of Hon. James J. Davis, Secretary of Labour of the United States, recommends an amendment to the Federal Constitution to enable Congress to deal with the child labour problem for the whole nation.

Two previous attempts have been made to treat this question federally. An Act was passed by Congress on September 1, 1916, prohibiting the employment of children below specified ages, and another on February 24, 1919, imposing a tax of 10 per cent upon the profits from the operation of mines or quarries employing children under 16 years of age and on factories employing children under 14 years of age. Both Acts have been declared unconstitutional by the Supreme Court.

The reports of the Bureau of the Census indicate that at present more than a million children between the ages of 10 and 16 are engaged in gainful work in industry. "A complete survey," the Secretary of Labour states, "would indicate that 1,500,000 American children are now the victims of premature toil in the mines and mills and factories and fields and homes of this country."

The details reveal that approximately 660,000 children between 10 and 15 years old are engaged in the sugar beet fields, the cotton fields and the onion fields of the country. "Apparently the usual method is to employ whole families by contractors to work in these fields. The children work with the adults usually from sunrise to sunset walking in a stooping position or crawling through the fields pulling up weeds, pulling up beets and onions, cutting the tops from these, and also in picking cotton." Families, composed largely of children, move from State to State where these agricultural industries thrive.

More than 50,000 children are employed as spinning girls and doffer boys in textile factories. Children in the cotton mills, it is reported, work 60 hours a week and those over 14 years of age work at night. Thousands do industrial home work, stringing beads, pulling threads, home lace work, etc.

Secretary Davis states that this condition of children in industry under supervision of parents or near relatives seems to have gone on without interruption even while the national child labour laws were in force, and it is doubtful whether any legislation of the type heretofore enacted would remedy the evil.

The Secretary of Labour also draws attention to a custom which grew up under the previous administration of suspending the operation of the immigration laws on the Mexican border to permit the importation of Mexican families for the purpose of working in cotton fields and sugar beet fields. He has decided that it is "improper to permit the importation of so called cheap labour in the form of labour of women and children in order to supply the market."

Forty-two States out of the forty-eight have adopted so called child labour laws, some of which are highly developed and rigidly enforced, while other are rather rudimentary and indifferently enforced. Manufacturers in the States where children under the age of 16 years are not permitted to work at all and where those above 16 and below 18 are only permitted to work under certain restricted conditions and regulations complain that they are subjected to unfair competition by manufacturers in States where there are no laws restricting child labour or where

the laws are less comprehensive or not enforced.

The Secretary of Labour holds that a solution must be found, either by providing for the enactment of uniform labour laws in all the States or by the adoption of an amendment to the

Federal Constitution giving Congress executive power to deal with the subject. The latter method is being advocated by the most representative organizations of women, and by trade unions, the National Consumers' League and the National Child Labour Committee.

## MINIMUM WAGES IN ALBERTA AND SASKATCHEWAN.

(a) Alberta Minimum Wage Board issues Orders No. 1 to 6. (b) Amendments to Order No. 4 of Saskatchewan Board.

**T**HE Minimum Wage Board of Alberta issued during January the first six orders under the Minimum Wage Act of 1922, fixing the minimum wage for female employees in the following occupations: 1. Manufacturing; 2. Laundries, dyeing and cleaning; 3. Hotels, restaurants, refreshment rooms, boarding houses, etc.; 4. Personal service; 5. Offices; 6. Shops, stores and mail order houses. Orders number 3, 4 and 5 take effect on April 1, and Orders number 1, 2 and 6 on September 1, 1923. The Board is composed as follows: Chairman, Mr. A. G. Browning, deputy attorney-general of Alberta; employees' representative, Mrs. Harriet J. Ingram, Garment Workers' Union; employers' representative, Mr. James Kellas, secretary of the Retail Merchants' Association. The new orders are as follows:—

### ORDER NO. 1.—FIXING MINIMUM WAGE FOR FEMALE EMPLOYEES IN MANUFACTURING INDUSTRY.

*Wages.*—(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female employee to be employed in any factory or work-room at a rate of wages less than \$14.00 per week.

(b) An experienced female is one who has completed the period of learning in a trade or industry as specified in this order.

(c) Millinery apprentices: A probationary period of one month for which no wages are stipulated is allowed, after which period an inexperienced female employee shall be paid

wages at a rate not less than \$4.00 per week for a period of two months, at a rate not less than \$6.00 per week for the next three months, at a rate not less than \$8.00 per week for the next three months, at a rate not less than \$10.00 per week for the next three months, at a rate not less than \$12.00 per week for the next three months, and thereafter shall be considered an experienced worker and shall be paid not less than the minimum rate of \$14.00 prescribed for experienced workers.

(d) Dressmaking, tailoring and fur-sewing apprentices: A probationary period of one month for which no wages are stipulated is allowed, after which period an inexperienced female employee shall be paid at a rate not less than \$6.00 per week for a period of three months, at a rate not less than \$8.00 per week for the next four months, at a rate not less than \$10.00 per week for the next four months, at a rate not less than \$12.00 per week for the next three months, and thereafter shall be considered an experienced worker and shall be paid not less than the minimum rate of \$14.00 prescribed for experienced workers.

(a) Learners in all other manufacturing occupations: For all inexperienced female employees employed in photographic studios, meat-packing, seed-packing and tea-packing establishments, any business, trade, calling or occupation in which any of the articles or commodities mentioned in the following list are manufactured, prepared or adapted for use or sale, in any business, trade or occupation: awnings, bags, baking powder, bedding, beds, bed-springs, buttons, cans, clothespins, coffee, corn brooms, cream and milk products, drug and toilet preparations, explosives, extracts, gas mantles, honey, ink, jelly powders, macaroni, matches, mattresses, men's neckwear, molasses, munitions, over-

alls, pails, paint, peanut-butter, roofing, sauces, shirts, soap, soft drinks, spices, sugar, sweeping compounds, syrups, tents, toys, umbrellas, varnish, vermicelli, wash boards, water-proof clothing, whisks, window shades, yeast, biscuits, brushes, candy, caps, carpets, cigars, elastic goods, furniture, gloves, hats (other than millinery), hosiery, ladies' and children's wear, leather goods, regalia, rugs, boots and shoes, dipped chocolates, draperies, furniture-covering, men's ready-to-wear clothing, paper boxes, book-binding, embossing, engraving, garment alteration, jewellery, manufacturing, printing, knitting factories, and any other manufacturing industry not enumerated: an inexperienced female employee shall be paid wages at a rate not less than \$6.00 per week for the first three months, at a rate not less than \$8.00 per week for the next three months, at a rate not less than \$10.00 per week for the next three months, at a rate not less than \$12.00 per week for the next three months, and thereafter shall be considered an experienced worker and shall be paid not less than the minimum rate of \$14.00 prescribed for experienced workers.

ORDER No. 2.—FIXING MINIMUM WAGE FOR FEMALE EMPLOYEES IN LAUNDRIES, DYEING AND CLEANING ESTABLISHMENTS.

1. No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a laundry or dyeing or cleaning establishment at a rate of wages less than \$14.00 per week.

An experienced female is one who has completed the period of learning as specified in this order.

2. The rate of wages for learners may be less than the rate prescribed for experienced workers provided that learners shall be paid not less than \$9.00 per week for the first three months, not less than \$10.00 per week for the second three months, not less than \$11.00 per week for the third three months, and not less than \$12.00 per week for the fourth three months, after which period a worker shall be considered experienced and shall be paid not less than the minimum rate of \$14.00 per week prescribed for experienced workers.

ORDER No. 3.—FIXING MINIMUM WAGE FOR FEMALE EMPLOYEES IN HOTELS, RESTAURANTS, REFRESHMENT ROOMS, BOARDING HOUSES, ETC.

1. (a) No person or corporation shall employ an experienced female or suffer or permit an experienced female to be employed

in any hotel, restaurant, refreshment room, boarding house, tea room, ice cream parlor or light lunch stand at a rate of wages less than \$14.00 per week of six days or \$16.50 per week of seven days.

An experienced female is one who has been employed in the industry three months or more.

(b) The rate of wages for learners may be less than the rate prescribed for experienced workers, provided that learners shall be paid not less than \$10.00 per week for the first month, not less than \$11.00 per week for the second month, and not less than \$12.00 per week for the third month, after which period a worker shall be considered experienced and shall be paid not less than the minimum rate of \$14.00 per week prescribed for experienced workers.

2. (a) Where meals are furnished by an employer as part payment of wages of an employee, not more than \$5.00 per week shall be deducted from her weekly wage for a full week's board of twenty-one meals. A fraction of a week's board shall be computed upon a proportional basis.

(b) Where lodging is furnished by an employer as part payment of the wages of an employee, not more than \$2.00 a week shall be deducted from her weekly wage for a full week's lodging of seven days.

ORDER No. 4.—FIXING MINIMUM WAGE FOR FEMALE EMPLOYEES IN PERSONAL SERVICE OCCUPATIONS.

1. (a) No person, firm or corporation shall employ an experienced female, or suffer or permit an experienced female to be employed in any hairdressing or manicuring establishment, beauty parlor, barber shop, theatre motion picture house, shooting gallery, joy parlour, dance hall, cabaret, garage, gasoline service station or any establishment where business of a similar nature is carried on, at a rate of wages less than \$14.00 per week (provided this clause shall not apply to ushers in theatres, motion picture houses, music halls, and cloak room attendants in cabarets and dance halls).

An experienced female is one who has completed the period of learning as specified in this order.

(b) The rate of wages for apprentices or learners in hair-dressing and manicuring establishments, beauty parlours, and barber shops may be less than the rate prescribed for experienced workers and shall be in accordance with the following schedule: One month probationary period for which no wage rate is

stipulated, not less than \$6.00 per week for the next two months, not less than \$8.00 per week for the second three months, not less than \$10.00 per week for the third three months, and not less than \$12.00 for the fourth three months, after which period a worker shall be considered experienced, and shall be paid not less than the minimum rate of \$14.00 per week prescribed for experienced workers.

(c) No learning period necessary for other occupations covered by this order.

(d) Ushers in theatres, motion picture houses, music halls, and cloak room attendants in cabarets and dance halls.

Class A.—Houses where performance is not continuous.

The minimum rate of wages for ushers in theatres, motion picture houses, music halls and cloak room attendants in cabarets and dance halls shall be fifty cents per hour or any fraction thereof with a minimum payment of \$1.00 for period between 9 a.m. and 6 p.m. or between 6 p.m. and 12 p.m.

Class B.—For ushers or cloak room attendants working more than twenty-eight hours and not more than forty-eight hours per week, the minimum wage shall be \$14.00 per week.

#### ORDER No. 5.—FIXING MINIMUM WAGE FOR FEMALE EMPLOYEES IN OFFICES.

1. (a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in an office as stenographer, book-keeper, typist, billing clerk, filing clerk, checker, invoicer, cashier, comptometer operator, auditor, attendant in physicians and dentists' offices, clerical work of any description, cash girl, telephone or telegraph operator, at a rate of wages less than \$14.00 per week.

An experienced female is one who has completed the period of learning as specified in this order.

(b) The rate of wages for apprentices or learners may be less than the rate prescribed for experienced workers and shall be in accordance with the following schedule: One month probationary period for which no wage rate is stipulated, not less than \$7.50 per week for the next two months, not less than \$10.00 per week for the second three months, not less than \$11.00 per week for the third three months, not less than \$12.00 per week for the fourth three months, after which period a worker shall be considered experienced, and shall be paid not less than the

minimum rate of \$14.00 per week prescribed for experienced workers.

#### ORDER No. 6.—FIXING MINIMUM WAGES FOR FEMALE EMPLOYEES IN SHOPS, STORES, AND MAIL ORDER HOUSES.

1. (a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a shop, store or mail order house at a rate of wages less than \$14.00 per week.

An experienced female is one who has completed the period of learning as specified in this order.

(b) The rate of wages for learners may be less than the rate prescribed for experienced workers, provided that learners shall be paid not less than \$7.50 per week for the first three months, not less than \$9.00 per week for the second three months, not less than \$10.00 per week for the third three months, not less than \$11.00 per week for the fourth three months, and not less than \$12.00 per week for the fifth three months, after which period a worker shall be considered experienced and shall be paid not less than the minimum rate of \$14.00 per week prescribed for experienced workers.

#### AMENDMENT OF SASKATCHEWAN ORDER No. 4 (HOTELS, RESTAURANTS, ETC.)

The Saskatchewan Minimum Wage Board, by an order issued in February, further modified the existing Order No. 4, governing the wages of female employees in hotels, restaurants and refreshment rooms. Order No. 4, first issued in March, 1920, was revised later in 1920, and in 1921 and 1922 (LABOUR GAZETTE September, 1920, page 1225; December, 1921, page 1488; June, 1922, page 608). In its original form the order applied only to a week of 6 days or 48 hours, the minimum wage for this period being fixed at \$14.00. Later revisions made provisions for a working week of 7 days, that of May, 1922, fixing the minimum for a 7-day week, at \$16.50 for experienced workers, except kitchen employees, for whom the minimum was \$14.50. The new revision, which takes effect on March 16, 1923, reduces the minimum wage for 7-day employees from \$16.50

to \$15.00 for experienced and from \$14.50 to \$13. for kitchen employees. The minimum of \$14 per week of 6 days (\$12 for kitchen employees) remains unchanged. Hitherto no provision had been made in the order for learners employed for a 7-day week; the

new revision now fixes this minimum at \$13.00. By another amendment to the existing order the minimum wage to be paid to employees working for a less number of days than six is to be calculated definitely on the rates fixed for a week of six days.

### AGREEMENT BETWEEN COAL MINERS AND OPERATORS IN DISTRICT 18 OF THE UNITED MINE WORKERS OF AMERICA.

ON March 14, an agreement was reached between the Western Canada Coal Operators' Association and District 18 of the United Mine Workers of America extending for one year to March 31, 1924, the provisions of the current agreement, the terms of which were given in the issue of the LABOUR GAZETTE for September, 1922, on page 955. The terms of the agreement covering wages and working conditions which were renewed by the last two agreements were given in the LABOUR GAZETTE for August, 1920, on pages 1048-1053 and November, 1920, pages 1047 and 1048.

The text of the new agreement is as follows:

This agreement made this fourteenth day of March in the year nineteen hundred and twenty-three, between the Western Canada Coal Operators' Association and the United Mine Workers of America, District 18.

Witnesseth that it is mutually understood and agreed by and between the parties hereto as follows:

1. That the agreement now in force between the said parties, and expiring on March 31st, 1923, be continued in force in all its terms, provisions and conditions for one year to March 31st, 1924.

2. And that the said parties meet in conference thirty (30) days prior to the expiration of the said agreement on March 31st, 1924, to discuss a renewal thereof.

In witness whereof the parties hereto have hereunto set the hands of their proper officers this fourteenth day of March, nineteen hundred and twenty-three.

THE WESTERN CANADA COAL OPERATORS' ASSOCIATION.

(Sgd.) JOHN SHANKS,  
President.  
(Sgd.) R. M. YOUNG,  
Secretary.

THE UNITED MINE WORKERS OF AMERICA, DISTRICT 18.

(Sgd.) W. A. SHERMAN.  
(Sgd.) R. LIVETT.  
(Sgd.) R. PEACOCK.

Witness to all signatures:

(Sgd.) B. CAUFIELD.

## THE EMPLOYMENT SITUATION DURING JANUARY 1923, AS REPORTED BY EMPLOYERS.

AS anticipated in the last report the volume of employment at the end of January, as indicated by returns tabulated by the Dominion Bureau of Statistics, showed a considerable increase, although recovery from the heavy seasonal losses registered at the close of December was not yet complete. The curve of employment in the accompanying chart gained slightly more than three points in January as compared with a decline of 9 during the preceding month. The situation, however, was very much more favourable than in January, 1922, the curve being on a level some 10 points higher.

A combined payroll of 745,878 workers was reported by the 6,253 employers making returns, of whom 733,063 were actually at work on January 31. At the end of the preceding month these firms had employed 707,859 persons. The index number, which is based on the number of persons working, therefore increased from 86.3 in December to 89.5 at the close of the month under review, as compared with 78.9 on January 31, 1922. The improvement was most pronounced in the manufacturing industries, notably so in iron and steel. Activity in logging and coal mining also

increased, but concerns in the transportation, construction and trade groups reported considerably reduced staffs.

Employment in all provinces except the Maritimes was in greater volume than at the close of December. Heavy contractions in steel works in Nova Scotia, supplementing losses of a more general character in sawmills, in construction and in gypsum mines caused employment in the Maritime section to decline on the whole, in spite of improvement in coal mining, railway transportation, logging and also confectionery factories. The largest increases to staffs were reported in Ontario, approximately 15,000 persons having been reinstated by the concerns making returns. Renewed activity in railway car, automobile, garment, hosiery, knitting, furniture, container, rubber, brass, bronze and copper works accounted for a large share of the gains. Construction and transportation, on the other hand, continued dull. In Quebec a decidedly favourable tendency was also in evidence, especially in car and locomotive plants, tobacco, garment and cotton concerns. Logging camps were more active but trade declined heavily and building construction did not afford so much em-

ployment. In the Prairie Provinces substantial recovery in railway car shops was partly offset by further curtailment of operations in transportation. Important contractions were also registered in retail trade. The repair departments of the railways reported increased activity in British Columbia, where saw-mills were a good deal busier, but noteworthy losses occurred in shipping and stevedoring and in construction. Employment in all provinces, as may be seen from the following table, continued to be in considerably greater volume than during the corresponding month of last year. The general situation was, however, not quite so favourable as in January, 1921.

District	Relative weight	Jan. 31, 1923	Dec. 31, 1922	Jan. 31, 1922	Jan. 31, 1921
Maritime Provinces..	9.0	93.3	90.8	78.6	96.3
Quebec and Ontario..	69.7	89.1	84.8	77.6	89.0
Prairie Provinces.....	13.4	91.6	90.0	83.0	93.7
British Columbia.....	7.9	88.4	88.3	84.3	87.2
Canada .....	100	89.5	86.3	78.9	90.1

Of the larger cities Montreal, Toronto and Hamilton recorded substantial improvement in comparison with December 31, while in Ottawa, Winnipeg and Vancouver the trend was downward. The resumption of work in the railway car shops in Montreal, together with increased activity in tobacco, rubber, cotton, garment, tin, brass, bronze and copper factories caused the level of employment to be considerably higher. On the other hand, retail stores and building contractors reported substantial reductions in staff. Statements were tabulated from 754 concerns in Montreal with an aggregate working force of 102,805 persons as compared with 95,828 at the close of December, an increase of 7.3 per cent. In Toronto, lead, tin, box, printing, publishing,

rubber, slaughtering, meatpacking, garment and millinery concerns recorded increased activity, but trade and construction were slacker. A total working force of 104,282 persons was indicated by the 877 concerns from which returns were received, an increase of 1 per cent over their December payrolls. In Ottawa 141 employers registered a staff of 12,326 persons as compared with 12,507 employees in their last report. This slight reduction was mainly due to general shrinkage in trade and construction. Hosiery, knitting, woodworking, agricultural implements, iron, steel, tobacco and electrical apparatus factories in Hamilton afforded considerably more employment than at the close of December. Retail stores and garment manufacturers, on the other hand, were decidedly less fully engaged. The payrolls of the 211 concerns making returns in Hamilton aggregated 27,039 persons, an increase of 1,084 workers or 4.2 per cent over their December staffs. Curtailment of personnel in retail stores was largely responsible for a 5 per cent reduction in employment in Winnipeg. Dairies and electric current concerns also employed smaller working forces, but, on the other hand, confectionery factories were busier.

Statements were compiled from 382 employers with an aggregate working force of 27,705 persons as compared with 27,288 in the last report. In Vancouver recovery in tin can and gas works was insufficient to counteract declines in building construction, shipping and stevedoring and tobacco factories. The payrolls of the 275 concerns making returns in that city aggregated 19,993 persons as compared with 20,783 in the preceding month. The following table gives the index numbers in these cities as compared with the preceding month and with the corresponding month of 1922.

City	Relative weight	Jan. 31, 1923	Dec. 31, 1922	Jan. 31, 1922
Montreal .....	14.0	86.2	79.8	73.6
Toronto .....	14.2	88.5	84.7	81.8
Ottawa .....	1.7	95.7	94.4	.....
Hamilton .....	3.7	86.0	81.5	.....
Winnipeg .....	3.8	89.0	92.6	84.1
Vancouver .....	2.7	85.8	87.7	88.7

#### The Manufacturing Industries.

The manufacturing industries, in which the heaviest reductions had been recorded at the close of December, registered especially marked revival in January, the index number gaining almost 9 points. Railway car, locomotive and automobile works in particular reported substantial recovery while the improvement in garment, knitting, cotton, furniture, sawmilling, rubber, tobacco, lead, tin, brass, bronze and copper plants was also noteworthy. All provinces except the Maritimes shared in the favourable movement, the extension of operations in Quebec and Ontario, however, being more decided than elsewhere. The only manufacturing industries to register curtailment were dairies, confectionery, steel, fur, brick, tile, glass and electric current concerns. Statements for the month under review were tabulated from 4,071 manufacturers employing 418,780 persons as compared with 384,494 workers on December 31, an increase of 34,286 employees or 8.9 per cent. The index number, therefore, reached 85, standing approximately 8 points above that for the end of December 1922, and some 12 points higher than on January 31, 1922. The general improvement during the month under review was considerably more pronounced than during the same month of last year, although the tendency had also been favourable at that time.

**ANIMAL PRODUCTS, EDIBLE** — Reductions in staff in dairies caused employment in this group to be further depressed, although meat packing plants

and abattoirs were slightly busier. The Prairie Provinces, Quebec, and the Maritime district registered moderate declines in personnel, while improvement was reported in Ontario and British Columbia. Statements were compiled from 155 employers with a total working force of 12,471 persons as compared with 12,653 on December 31, a decline of 1.4 per cent. Contractions on a larger scale had been indicated during January, 1922, and the index number then stood a few points lower than for the month under review.

**LEATHER PRODUCTS.**—A steadily upward tendency was indicated in this group from the end of July to the close of December, when shut downs for inventories and other purposes caused a break in the series of increases. During January however the favourable movement was resumed, 485 persons being added to the staffs of the 204 concerns making returns. Their total payrolls included 18,614 persons as compared with 18,129 in January, an increase of 2.7 per cent. A large majority of these workers were reinstated in boot and shoe factories, but tanneries and works producing harness and other leather goods were busier also. Practically all the expansion occurred in Ontario; in Quebec small reductions in staff were reported while elsewhere the changes were insignificant. Activity in the leather industries in January of last year had also shown improvement and the index number then stood very slightly higher than for the month under review.

**LUMBER PRODUCTS.**—Increased operations were reflected in every branch of this group, sawmills, furniture, container and vehicle works particularly registering large additions to staff. The gains in sawmills which are the first to be recorded since July are especially interesting since they mark the commencement of seasonal activity after a period of pronounced curtailment. The majority of the additionally employed workers were recorded by Ontario factories although considerable improvement was indicated also in Quebec and British Columbia. In

New Brunswick on the other hand the trend continued downward. Statements were tabulated from 716 firms employing 39,990 persons as compared with 37,607 on December 31. The difference represented an expansion of 6.3 per cent. The movement during January 1922 had also been favourable, but employment this year is on a very much higher level.

**PLANT PRODUCTS, EDIBLE.** — Moderate recovery was indicated in this group, espacially by biscuit factories. On the other hand, the production of confectionery declined to some extent. An aggregate working force of 24,269 persons was shown by the 342 manufacturers making returns who had provided work for 23,461 workers during the preceding month. All provinces shared in this gain of 3.4 per cent. Increases in employment on a rather larger scale had been indicated during January 1922 but the index numbers for the two periods were practically the same.

**PULP AND PAPER PRODUCTS.** — Some expansion was indicated in this group also, 431 persons having been added to the staff of the 492 concerns making returns. Their total payroll comprised 49,559 workers as compared with 49,128 in December. Ontario recorded practically all of this increase, while in Quebec reductions in personnel were indicated. Manufacturers of pulp and paper and of paper goods were busier than in the preceding month but printing and publishing concerns reported minor declines in activity. A rather more pronounced revival of activity had been reported during January of last year, but conditions for the period under review were decidedly better than at that time.

**RUBBER PRODUCTS.** — Rubber footwear and tire factories in Ontario and Quebec registered substantial improvement. The 30 manufacturers making returns, whose payrolls aggregated 11,045 persons, reported that they had enlarged their staff by 2,595 persons or over 30 per cent. This gain caused the index number to be 5 points higher than

during the corresponding month of last year, when the tendency had also been progressive.

**TEXTILE PRODUCTS** — Resumption of work in a large number of factories which had been temporarily closed down over Christmas and the New Year caused employment in this group to be on a much higher level than in the preceding month. Cotton, hosiery, knitting, garment and personal furnishing manufacturers were decidedly busier, while additions to staffs on a somewhat smaller scale were registered in headwear factories. Practically all the gain was recorded in Ontario and Quebec, the changes elsewhere being slight. Reports were compiled from 580 concerns in the textile division with a total working force of 70,053 persons as compared with 66,231 in December. There was therefore, an increase of 3,822 employees or 5.8 per cent. The volume of employment during the month under review was slightly greater than in January, 1922, although the improvement reported at that time had provided work for a slightly larger number of workers.

**TOBACCO, DISTILLED AND MALT LIQUORS.** — Partial recovery from the losses recorded at the end of the preceding month was indicated in this group during January, when 1,188 persons were added to the staffs of the 99 employers making returns. Their total working force of 10,402 persons was 12.9 per cent larger than in December. The greater part of the increase occurred in tobacco factories in Quebec and Ontario. Additions to payroll on a somewhat larger scale had been registered during January of last year, when the level of employment was rather higher than for the month being surveyed.

**CHEMICALS AND ALLIED PRODUCTS.** — The production of drugs and medicinal preparations in Ontario and Quebec employed more workers than in December, when there had been considerable reductions owing to shutdowns over the holiday season. An aggregate payroll of 6,624 workers was reported by the

118 manufacturers making returns, who had employed 6,432 persons in their last report. The difference represented an increase of 3 per cent. The index number of employment stood several points higher than in January of last year when the trend had also been upward.

**CLAY, GLASS AND STONE PRODUCTS.**—Continued curtailment of operations was indicated by brick, tile and glass works, especially in Quebec. Returns were received from 116 concerns whose staffs totalled 8,277 persons as compared with 8,704 in December, a contraction of 4.9 per cent. The movement in January, 1922, had also been retrogressive, but since employment had increased steadily during the greater part of 1922, the index number stood some 14 points higher than at the end of January of last year.

**ELECTRIC CURRENT.**—Employment in this industry declined in Quebec, Ontario and the Prairie Provinces, there being a 2 per cent reduction in the staffs of the 97 concerns reporting. Their aggregate working force stood at 10,387 persons as compared with 10,597 in December. The situation during January of last year had shown practically no change; the volume of employment during the period under review, however, was considerably larger than at that time.

**ELECTRICAL APPARATUS.**—Substantial improvement was recorded by manufacturers of electrical appliances during January, 478 persons having been added to the staffs of the 34 concerns making returns whose payrolls comprised 7,331 workers. This increase of 7 per cent was reported almost entirely in Quebec and Ontario. Practically no change in the situation had been indicated during January of last year and the level of employment for the month under review was nearly 23 points higher than at that time.

**IRON AND STEEL.**—Complete recovery from the losses reported at the close of

December was indicated in this group, the increases in January being, in fact, somewhat larger than were the declines recorded during the month before. Railway car and locomotive shops registered especially pronounced increases in staffs; the gains in automobile general plant machinery, shipyards, heating appliance and iron and steel fabrication works were also important. In addition, minor gains were shown in a number of the smaller divisions of the industry. The only significant declines occurred in steel plants in Nova Scotia. All provinces except Maritimes shared in the upward movement, the additions to staffs in Ontario, however, exceeding those in other provinces. A combined working force of 121,239 persons was indicated by the 719 concerns making returns, who had employed 99,954 workers at the close of December. There was, therefore, an increase of 21.3 per cent. The reaction during the early part of January, 1922, from the losses reported at the end of the year had been largely offset by shutdowns in the railway car shops at the close of the month. The index number at that time stood over 23 points lower than for the month under review.

**NON-FERROUS METAL PRODUCTS.**—The reinstatement of large numbers of workers temporarily laid off at the end of the year caused employment in these industries to be on practically the same level as in November. Statements tabulated from 122 concerns showed a combined working force of 10,980 persons, an increase of 1,485 persons or 15.6 per cent over their December staffs. Practically all this recovery occurred in lead, tin, zinc and copper works in Ontario, although moderate improvement was also indicated in Quebec and British Columbia. Employment during the month under review was in considerably greater volume than during January of last year when increased activity, though on a rather smaller scale, had also been indicated.

### Logging.

Logging camps in Quebec, New Brunswick, and British Columbia continued to absorb additional employees, while elsewhere employment remained unchanged. Approximately 1,400 persons were added to the payrolls of the 206 concerns making returns, whose staffs totalled 34,828 persons as compared with 33,439 workers in December. This gain of 4.2 per cent caused the index number of employment to be higher than any period of 1922 and 1921. Increases on a slightly smaller scale had been indicated during January of last year, but the situation then was very much less favourable than for the month being reviewed.

### Mining.

**COAL MINING.**—Considerable expansion was reported in this industry during January, the improvement occurring in the Maritime and Prairie Provinces, while in British Columbia some curtailment was shown. Reports were received from 91 operators employing 31,753 persons as compared with 30,758 in their last report, a gain of 3.2 per cent. Contractions had been registered during the corresponding month of 1922 and the index number at that time stood some 9 points lower than during January of this year.

**NON-METALLIC MINERALS OTHER THAN COAL.**—Further losses were reported in this group; activity in asbestos and gypsum mines in Quebec and Nova Scotia respectively declined. A combined working force of 4,948 persons was indicated by the 65 concerns making returns, the payroll showing 417 workers or 7.8 per cent less than in December. Minor contractions had been recorded during the corresponding month of last year although employment then was in smaller volume than for the period under review.

### Communication.

Employment in both telephone and telegraph divisions showed a further falling off, although the decreases were on a much smaller scale than in December. Returns compiled from 197 concerns showed a total payroll of 20,186 persons as compared with 20,428 in the month before. This decline of 1.2 per cent was fairly evenly distributed over the country. Much heavier losses were recorded in January, 1922, but the index number of employment for the month under review was only slightly higher than at that time.

### Transportation.

**STEAM RAILWAYS.**—Continued curtailment of operations was indicated in this group during January. Quebec, Ontario and the Prairie Provinces reported reduced activity; in the Maritime district additions to staff were registered, while in British Columbia the situation remained stationary. Statements were tabulated from 125 concerns and divisional superintendents employing 73,597 persons as compared with 75,562 workers on December 31, a contraction of 2.6 per cent. This movement repeats that evidenced during the corresponding month of last year when the index number had stood approximately 4 points lower.

**SHIPPING AND STEVEDORING.**—Employment in this industry showed a further though much smaller decline than in December, 982 persons having been released from the staffs of the 56 concerns making returns. Their payrolls aggregated 9,555 workers as compared with 10,537 in December. Approximately 60 per cent of this decline of 9.3 per cent occurred in British Columbia, but the tendency in all provinces was unfavourable. Contractions had also been registered during January, 1922, and the index number of employment at that time stood slightly lower than for the month being surveyed.

## Construction and Maintenance.

**HIGHWAY CONSTRUCTION.**—The number of men employed on highways and roads continued to decline during January, mainly in Ontario. Returns were compiled from 31 employers whose staffs aggregated 2,424 persons as compared with 4,706 in December; the difference represented a shrinkage of 48.5 per cent. Losses on a rather larger scale had been indicated during the same month of the preceding year, but the level of employment was somewhat higher for the month under review than at that time.

**BUILDING CONSTRUCTION.**—Statements received from 328 building contractors showed that their payrolls aggregated 12,966 persons as compared with 16,005 at the close of December, a decline of 19 per cent. All provinces shared in the downward movement which, however, was more pronounced in Quebec and Ontario than elsewhere. Considerable curtailment had also been indicated during January, 1922, although the losses were not so large as for the month being surveyed. The index number then stood several points lower than on January 31, 1923.

**RAILROAD CONSTRUCTION AND MAINTENANCE.**—A rather slight increase in personnel was shown in this industry during January, 134 persons being added to the staff of the 31 concerns and divisional superintendents reporting. Their payrolls comprised 28,480 persons as compared with 28,346 at the end of the preceding month. This increase of .5 per cent is interesting because it is the first favourable tendency that has been indicated since the beginning of August, large declines having been shown in each of the intervening months. The improvement was confined to the Maritime district and Quebec and was partly a result of heavy snow falls. The movement during January, 1922, had been retrogressive and the index number then stood about 7 points lower than for the month under review.

### Trade.

Marked reaction from the activity due to Christmas buying was evident in returns from retail establishments, while wholesale dealers were somewhat slack-er also. The declines were generally distributed. A total sales force of 55,960 persons was indicated by the 694 concerns making returns who had employed 58,616 workers at the close of December. Of this reduction of 2,656 employees, or 4.5 per cent, approximately 2,300 were let out by retail stores. The declines recorded during January, 1922, had been

rather more extensive and employment then was in slightly smaller volume than for the month being reviewed.

The table on page 302 gives the index numbers of employment in the various industries as at January 31, 1923, as compared with December and January, 1922, and January, 1921. As is custom-ary, the first column indicates the pro-portion of workers in each industrial group in relation to the total number of workers in all groups for the month under review. (Number of workers em-ployed on January 17, 1920 equals 100).

## EMPLOYMENT OFFICE REPORTS FOR JANUARY, 1923.

**T**HE business of the offices of the Employment Service of Canada for the month of January, 1923, was greater in volume than during the preceding month and during the corresponding period of 1922. The accompanying chart, which presents the returns from the offices on the basis of daily aver-ages over half-month periods, indicates that during January there was a notice-able recovery after the depression of the holiday season in December, em-ployment as represented by the curves of applications, vacancies, and place-ments, being on a higher level than during January, 1921 or 1922. This was due chiefly to the large number of workers employed casually at work in-cident to the heavy snow storms ex-perienced in all parts of the Dominion. The reports from the offices show that an average of 1,919 and 1,650 applica-tions daily were received during the first and second half of January, respectively, as compared with 1,810 and 1,595 during the same period of 1922. The average number of applica-tions received daily during the latter half of December, 1922, was 1,219. Em-ployers notified the Service of an average of 1,298 vacancies daily dur-ing the first half of January as com-pared with 1,007 during the preceding period and 1,001 during the same pe-

riod in 1922. During the latter half of the month under review vacancies averaged 1,273 daily as compared with 856 during the same period a year ago. Placements effected during the first half of the month averaged 1,142 daily as compared with 821 during the pre-vious period and 910 during the first half of January, 1922. During the lat-ter half of the month, the average number of placements daily was 1,159 as compared with the average of 781 during the same period of last year. The placements in regular employment averaged 634 and 566 daily, while the average number of placements in casual work was 507 and 592 daily during the first and second half of the month respectively. The following table presents the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,264	445,811
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923 (1 month)	15,539	14,385	29,924

During the month of January, 31,822 persons were referred to vacancies

while a total of 29,924 placements were made. Of these, the placements in regular employment numbered 15,539 (12,827 of men and 2,712 of women) and 14,385 were in casual work. Vacancies reported at the offices by employers numbered 33,388, of which 25,700 were for men and 7,688 for women. Applications for employment registered at the offices totalled 46,131, of which 36,841 were from men and 9,290 from women.

Placements in regular employment by provinces were as follows: Nova Scotia: 300 men, 120 women; New Brunswick: 362 men, 96 women; Quebec: 555 men, 400 women; Ontario, 5,926 men, 792 women; Manitoba: 1,676 men, 428 women; Saskatchewan: 1,008 men, 364 women; Alberta: 1,283 men, 281 women; British Columbia: 1,627 men, 231 women.

#### MARITIME PROVINCES.

Little improvement was noted in the employment offered in the construction groups in the Maritime Provinces, the colder weather and recent snow storms causing curtailment of all outside

work. A few plasterers and carpenters were required at Moncton and St. John, while at Halifax several labourers were placed on electric power extension work. Civic relief works such as street grading and the construction of storm sewers, gave employment to numbers of married men at Halifax. A large percentage of workers were placed in casual employment, shovelling snow and clearing the streets, at Halifax, Amherst and Sydney. While no large demand was shown in the logging group, a few choppers, teamsters and swampers were placed at New Glasgow, Halifax, Chatham and Moncton. In the mining industry a number of vacancies for shooters and loaders were registered at Sydney, while at Moncton a few experienced miners were in demand. The calls for domestic workers remained fairly numerous, although fewer requests for institutional help were received.

#### QUEBEC.

Continued slackness was reported in construction operations in the province, although many building tradesmen and labourers were placed on short jobs

from the offices at Montreal and Quebec. In logging an increased number of orders were received from Hull, Montreal and Quebec. Several gangs of bushmen, teamsters and loaders, were sent to camps in the northern part of the province and to Ontario. Requests for resident household workers were received in considerable numbers but the offices reported a slight scarcity of trained applicants.

#### ONTARIO.

In the agricultural localities a slightly brighter outlook existed, and the offices at Toronto, Belleville, Guelph and Oshawa reported an increased number of orders, mostly for permanent farm work. Weather conditions have effected operations in the building industry and have set back much active construction work. A few calls for carpenters, bricklayers and plasterers were registered at Windsor, Sarnia, Toronto and North Bay, and a few construction labourers were placed with electric power companies at Cobalt and Timmins. Municipal public works such as the construction of storm sewers street repairing and road grading continued to form a large part of the placements in this group. Ice cutting provided temporary employment for many at Sault Ste. Marie, Sarnia and North Bay, while at most of the larger municipalities snow shovelling and clearing the streets gave casual work to many. Section workers were required at Windsor and Port Arthur, and rock cutters and labourers for railway extension work were placed near Timmins. In the logging industry there was an increased number of orders for teamsters, loaders, pulpwood cutters and tiemakers, with a slight shortage of experienced applicants. Placements in this group were made from Port Arthur, Fort William, Ottawa, North Bay, Cobalt, Timmins and Toronto. The office at Cobalt reported a few vacancies for miners. The manufacturing industries, on the whole, showed little improvement and sea-

sonal dullness still prevailed. Orders for sawmill workers and pulp mill workers were filled from Belleville, North Bay and Ottawa. Skilled tradesmen, locomotive pattern makers, tool and die makers, and tool repair men, were required at Windsor and Kingston, while orders for varnish rubbers, auto painters and trimmers were registered at Oshawa. The demand for domestic workers and charwomen continued very active, but the offices were able to fill only partially the calls for resident household workers.

#### MANITOBA.

Despite the slightly increased demand for farm workers at Brandon and Winnipeg on the whole very few placements were made in this group. The reduced activities in the building industry increased the number of unemployed to some extent although temporary work for numbers of married men was provided on various public projects, such as sewer work, salvaging of water pipes and the demolition of ice breakers. The ice harvest created a small demand for cutters, teamsters and labourers, the duration of this work being approximately two or three weeks. Seasonal casual work gave employment to many. Placements in the logging industry continued to form a large part of the business of the offices, and, while experienced applicants were secured with difficulty, large numbers were sent to camps in Northern Manitoba and in Ontario. Several orders for domestic servants were received and in most cases were satisfactorily filled.

#### SASKATCHEWAN.

The slackness in the agricultural group continued, and few workers were placed on farms during the month. Severe weather conditions caused curtailment of operations in the construction groups. A few linemen and groundmen for telegraph work were placed near Moose Jaw, while section work-

ers, bridge builders and steel gangs, were in demand at North Battleford, Regina and Moose Jaw. Ice cutting near Swift Current gave work to a few. Cordwood cutters, tiemakers and teamsters were placed in large numbers from the offices at Moose Jaw, Regina, Prince Albert and Saskatoon, while in the two latter offices vacancies for sawmill workers were registered.

#### ALBERTA.

Apart from a few placements of farm hands at Calgary, Edmonton and Lethbridge, little activity was shown in this group. Operations in the building industry were confined mainly to civic work on sewer and water mains, and clearing the debris from fire-damaged areas. A few labourers were placed on irrigation work near Lethbridge. A slightly increased demand was reported in the logging group, and from Calgary and Edmonton experienced teamsters, loaders, and tiemakers, were sent to the camps. Calls for domestic servants and charwomen remained approximately in the same volume as previously reported with a slight shortage of experienced workers, but very few requests were received for institutional or clerical workers.

#### BRITISH COLUMBIA.

Construction work in this province was suspended on account of weather conditions, and numbers of carpenters and building labourers were registered as unemployed. Some provincial and municipal works were in progress, employing several hundreds of men near Nelson, Vancouver and Victoria, while ice cutting and packing near Revelstoke created a demand for teamsters and labourers. Railway snow clearing service furnished temporary employment for many at various points. Hookers, cawyers and tiemakers, were placed in considerable numbers from the offices at Kamloops, Prince Rupert, Prince George, Revelstoke and Van-

couver, while sawmills, lumber and shingle mills, continued to supply work for many. In the mining group, calls were registered for quartz miners at Vancouver, and for miners and muckers at Cranbrook. The demand for women workers was quiet with few experienced applicants for resident household work, but the number of casual workers registered was equal to the demand.

#### Movement of Labour.

Reports from the offices of the Employment Service of Canada show that 15,539 placements were made in regular employment during January, 1922, of which 9,065 were of persons for whom the employment secured was outside the immediate locality of the offices at which they were registered. Of these 2,230 were granted the Employment Service reduced transportation rate, 1,633 going to points in the same province as the despatching office and 597 to points in other provinces.

The 133 reduced rate transportation certificates issued by the Province of Quebec were to bushmen, 104 of whom were going from Hull and Montreal to points near Sudbury, Pembroke and Sault Ste. Marie. The 29 bushmen sent to camps within the province were going to points north of Quebec City. Ontario offices despatched 786 workers at the special reduced fare, one of whom was a cook going from Ottawa to Temiskaming, Que. Of the remainder, the majority were bushmen, teamsters and camp cooks, going to lumber camps near Timmins, Cobalt, Sault Ste. Marie, Fort William, Port Arthur and Sudbury. From the office at Ottawa, 2 stonemasons were transferred to London, 1 upholsterer to Oshawa and 1 candymaker to Windsor. From Toronto 1 tiemaker, 1 machinist and 1 stationary fireman were transferred to Windsor, 4 pattern makers to Kingston, and 1 musician to Ottawa. Manitoba offices granted 139 certificates to persons going to points within

the province, and 437 to persons going to other provinces. Of those going to employment within the province, 27 were lumber workers and camp cooks, 98 were farm hands and 14 were women household workers. Of the 437 workers transferred to other provinces, 428 were to points in Northern Ontario, of whom 2 were sheet metal workers, 7 were women domestic workers, and the remainder were bushmen, labourers and teamsters for lumber camps and sawmills. Nine workers were transferred to Saskatchewan points, 5 of whom were farm hands and 4 were women household helpers. The offices in Saskatchewan issued 229 special transportation certificates, 174 of which were issued to persons going to points within the province. Of these, the majority were bushmen and camp workers going to points north of Port Arthur, and a few were farm hands and domestic workers. Of the 28 workers sent to points in Ontario, 1 was an elevator operator from Regina to Ottawa and the remainder were bushmen going to points near Fort William and Port Arthur. To Manitoba points

the offices sent 27 bushmen. The Alberta offices despatched 378 workers to various points within the province, the majority of whom were bushmen, sawyers, teamsters and blacksmiths, for the lumber camps north of Edmonton. A few were miners going from Calgary, Drumheller and Edmonton, to the mines near Saunders, Alta., while from all the offices farm hands, household workers, institutional help and a few clerical workers were sent to various points. The persons benefiting by the Employment Service reduced rate in British Columbia numbered 128, the majority of whom were bushmen going to various camps within the province; a few were farm workers, while from Vancouver several labourers, 2 millwrights, 1 engineer and 1 blacksmith were sent to points within the zone.

Of the 2,230 workers who were granted the Employment Service reduced rate, 1,269 were carried by the Canadian National-Grand Trunk Railways, 864 by the Canadian Pacific Railways and 97 by the Temiskiming and Northern Ontario Railway.

---

### BUILDING PERMITS ISSUED DURING JANUARY, 1923.

ACCORDING to reports from municipal officials tabulated by the Dominion Bureau of Statistics the value of building permits issued in 56 cities during January showed a decline from the level of recent months, which was attributed to seasonal slackness in building operations, but the value of building authorized was greater than in the corresponding month of last year. In these cities permits to the value of \$3,705,256 were issued in January, being \$5,353,217, or 59 per cent, lower than in December, 1922, when permits to the value of \$9,058,473 were issued. In January, 1922, the 56 cities had issued permits totalling \$2,933,035. The increase during the

month under review in this comparison was therefore \$772,221, or 26 per cent.

An analysis of the reports shows that Manitoba and British Columbia were the only provinces to report increases in the value of building contemplated as compared with December. In the former province the increase amounted to \$37,000 while in British Columbia; where the situation is not so much affected by the season, there was an increase of \$130,560. The largest declines occurred in Quebec and Alberta, being \$3,378,812, or 85.4 per cent, in the former province, and \$1,408,835, or 97.6 per cent, in the latter.

The accompanying table shows the value of the permits issued during January, 1923, and also during December and January, 1922. The 35 cities for which records are available since 1910 are marked by asterisks.

## BUILDING PERMITS ISSUED IN CANADA DURING 1922.

**R**EVISED statements received by the Dominion Bureau of Statistics from municipal officials show that the value of the building permits issued in 56 cities during 1922 stood substantially higher than in the preceding year and also than in 1920. Building to the value of \$133,812,688 was authorized by these cities as compared with \$106,322,874 in 1921 and with \$109,926,923 in 1920. There were, therefore, increases of \$27,489,814 or 25.9 per cent in the former comparison and \$23,885,765 or 21.8 per cent in the latter. Table I on page gives the value of building permits issued in these cities during the past three years.

Of the total increase over the preceding year, \$17,969,775 was registered by the 25 Ontario cities making returns; the value of their permits aggregated \$67,246,774, or 36.5 per cent more than in 1921. This was the largest actual increase recorded, but the percentage gain was smaller than in some other provinces. British Columbia, with the largest proportional increase, ranked second in actual gain. The 1922 permits in that province were valued at \$14,351,058 and stood \$4,950,002 or 52.7 per cent higher than in the preceding year. Alberta, where the estimated cost of building work exceeded that for 1921 by \$1,552,758 or 37.2 per cent, and Quebec, with an increase of \$1,460,431 or 5.1 per cent, came next in order. The only declines indicated were in Prince Edward Island and Nova Scotia, where the value of prospective building was less by 41 and 28 per cent, respectively, than in the preceding year.

The largest aggregate of building permits issued in any one city during the year was reported in Toronto, where the value reached \$35,237,925, which was \$11,359,679 or 47.5 per cent higher than the total for the year before. In Mon-

treál, building to the value of \$21,132,586 was authorized as compared with \$21,291,273 in 1921. A total of \$8,661,695 was recorded by Vancouver; this sum was \$5,616,563 or 184.1 per cent higher than in the preceding year. In Winnipeg the permits issued amounted to \$6,875,750, an increase of \$1,295,350 or 23.2 per cent as compared with the figures for 1921. In addition to the large totals mentioned above building valued at between one and six million dollars was authorized during the year in Halifax, Moncton, Quebec, Three Rivers, Westmount, Fort William, Hamilton, Kitchener, London, Oshawa, Ottawa, Port Arthur, St. Catharines, Windsor, Regina, Saskatoon, Calgary, Edmonton, Point Grey and Victoria. The totals in all these cities except Halifax, Three Rivers, Windsor, Regina and Point Grey exceeded those for the preceding year. The value of building estimated in Halifax has declined steadily since 1919, when there was unusual activity in an effort to repair the damage caused by the explosion of 1918. The totals since then, however, have been substantially higher than in former years. In Moncton, the permits issued last year stood considerably higher than in 1921, but were lower than in the preceding two years. The value of prospective building in Quebec which was the largest total ever recorded for that city was \$1,702,169 or 46.6 per cent above that for the year before. Permits issued in Ottawa aggregated \$5,021,782 or 14.2 per cent more than the previous high record since 1910, which occurred in 1914.

An analysis of the returns by months shows that the value of prospective building increased steadily from January to June. From then until the end of the year declines were recorded each month with the exception of August, when the total stood higher than for any

for the construction of a pier in Vancouver, which caused the value of the permits issued in that city to be a great deal higher than in any other month of 1922.

Table II on next page shows the value by provinces of the building permits issued during the last nine years in the 35 cities for which records are available since 1910. These cities are marked by asterisks in Table I. In making comparisons the greatly increased costs of building supplies and of labour during and immediately after the war must be remembered. Although there were considerable declines in such prices during 1921 and 1922, it is still true that the total for the latter year does not represent nearly so large a volume of building as it would have done in pre-war years. The total for the 35 cities, standing at \$122,655,581, was 29.8 per cent higher than in 1921 and 21.8 per cent above the level of 1920. Since building material and labour costs, as reflected by the Department of Labour's index numbers, have declined by approximately 32 and 10 per cent respectively from the 1920 levels, the increase in the building represented by the value of permits issued is considerably greater than the percentage gain would indicate. The total for 1922 stood 26.9 per cent above that for 1914, but it is substantially smaller than the values for 1911, 1912, and 1913 which, when prices were very much lower, reached \$138,170,390; \$185,233,449 and \$153,662,852 respectively. Immigration during those three years was on an exceptionally high level, and part of the enormous volume of building indicated by building permits was necessary to meet the housing requirements of the immigrants.

The value of the permits issued in the 15 Ontario cities included in the original tabulations reached a total of \$61,796,676, which was 40.6 per cent higher than in 1921 and 23.5 per cent above the level indicated in 1912, the previous high mark of the record, when the permits

other month of the year except May. The large amount for the former month was due to authority having been given

issued had totalled \$50,022,468. In Quebec the value for 1922 was exceeded only in 1913, which at \$34,893,449 was 13.5 per cent higher than for the year under review. The value of building authorized in the three Prairie Provinces showed the greatest decline from the level of

pre-war years, being over \$33,000,000 less than in 1913 and \$61,000,000 smaller than in 1912, the peak year. The 1922 total for British Columbia, \$10,026,749, was some five millions less than for 1913 but was considerably higher than in any of the intervening years.

### FAIR WAGE CONTRACTS, FEBRUARY, 1923.

**D**URING February the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to three fair wage contracts which were awarded by the Department of Public Works. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

#### DEPARTMENT OF PUBLIC WORKS.

Repairs to the Public Wharf, Port Hood, N.S. Name of contractor, The Sydney Construction Company, Limited, Sydney, N.S. Date of contract, January 20, 1923. Amount of contract, unit prices.

Alterations to Postal Station "B" and installation of elevator therein, Hamilton, Ont. Name of contractor, Kennedy Connor, Hamilton, Ont. Date of contract, January, 22, 1923. Amount of contract, \$6,200.

Construction of wharf, Millhaven, Ont. Name of contractor, Maria R. Midner, Napanee, Ont. Date of contract, February 17, 1923. Amount of contract, unit prices.

#### POST OFFICE DEPARTMENT.

The following is a statement of payments made in February for supplies ordered by the Post Office Department subject to the Regulation for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
Making metal dating stamps and type, and other hand stamps and brass crown seals	\$ 349.00
Making and repairing rubber stamps, daters, etc.....	52.42
Making up and supplying letter carriers' uniforms, etc.....	37,741.40
Repairing letter boxes, etc., and hampers	120.00
Supplying mail bag fittings.....	5,014.39
Supplying ink.....	261.50

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES.

---

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: fur and products.

MONTREAL, QUE. — MONTREAL FUR MANUFACTURERS' PROTECTIVE ASSOCIATION, AND THE JFINT BOARD OF THE FURRIER'S UNION OF MONTREAL, LOCALS No. 66 AND 67 OF THE INTERNATIONAL FURWORKERS OF THE UNITED STATES AND CANADA. Agreement to be in effect from February 1, 1923, until January 31, 1925.

A permanent committee of five members of each party appointed to retain office until January 31, 1925, any vacancy on the committee to be filled in the case of either party by one who has had three years' continuous service in Montreal, as a worker or a manufacturer, as the case may be. The committee to meet weekly if necessary, and oftener if unanimously agreed.

No strikes or lockouts to take place during life of the agreement; all controversies or disputes to be referred to the conciliation committee through its chairman, and to be taken up at the

subsequent regular meeting of the conciliation committee and adjusted within forty-eight hours, unless the time be extended by mutual consent.

In event of the unavoidable absence of one member of either party on the committee the other party to allow one member to withdraw. For the purpose of enabling the committee to proceed to business or in case of absence of more than one member of either side, that side to have power to elect others to bring number up to five.

An open shop to be maintained for the manufacturers.

Both parties to prohibit intimidation, interference or discrimination among employees.

The principle of equal division of work to be adhered to as far as possible. No employee to be discriminated against by an employer belonging to the association on account of being a union member.

Hours per week, forty-four, distributed as agreed upon, but ending at noon on Saturday. Overtime to be permitted only from September to March inclusive, and to be paid time and one-half. Certain legal holidays to be given with pay, provided the employee works the balance of week in which holiday occurs. Work done on said holidays to be paid time and one-half plus the day's pay, but work not to be required.

No work to be done by workers in their own homes. No employee to be permitted to work overtime, in any factory or shop other than the one in which he or she is employed during the day.

No contracting or sub-contracting to be permitted inside of the factory. No work to be sent to any shop where conditions are inferior to those stipulated.

Union side may call a meeting of the conciliation committee when they do not consider the conditions in any shop equal to the average of association shops. The association undertakes to investigate and endeavour to adjust conditions.

**Manufacturing: Iron, Steel and products.**

GUELPH, ONT. — GUELPH STOVE COMPANY AND IRON MOULDERS' UNION, LOCAL 212. Agreement to be effective from January 8, until December 31, 1923, with 30 days' notice of desired change at expiration.

Piece work moulders' wages to be increased 16 per cent. Day work wage to be \$6.

**Manufacturing: Animal Foods.**

VANCOUVER, B. C. — FRASER VALLEY DAIRIES, LIMITED, AND INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL No. 464, MILK DRIVERS AND DAIRY EMPLOYEES. Agreement to be in effect from June 15, 1922, until June 15, 1923.

Members of the union to be employed unless none are available, in which case non-union labour shall have union wages and make application for membership within two weeks. An applicant not to be refused membership by reason of a union man being out of employment. Employer may discharge employees for specified misconduct. Employees to provide suitable working apparel, employer supplying aprons. No workman to be discharged or discriminated against for upholding union principles.

Employees to be allowed one day off in seven, or one week off in seven weeks. A driver's day's work to be considered accomplished when he has finished his route satisfactorily. If an employee's holidays are postponed, he or she may request payment for time due. To help

other than drivers, a day's work to be 8 hours; overtime, time and one-half.

All new employees to sign a copy of this agreement within 30 days. Employees to receive seven days' notice of discharge, and to give employers the same notice.

On certain dates, managements to hold meetings to discuss problems of interest to dairy salesmen. Members to be fined or suspended for drunkenness, dishonesty or incompetency. In case of breakdown of machinery, manager not to be compelled to pay overtime: provided men are notified to lay off during repairs, and men kept standing by are paid overtime, if standing by compels them to work longer than 8 hours. Employees of any firm to perform their usual work and no more in case of a strike of employees of another firm with which the first firm is doing business.

Wages per month: driver salesmen (retail) \$52.25, with additional points according to specified table for wholesale or retail sales, three points representing one cent; truck drivers, \$120; truck helpers, stable helpers and all other inside help, \$110; checkers and inside relief men, \$115; outside relief men, \$150. New employees without experience to receive \$5. less than above rates for first three months. New men on routes not to be paid for the first three days learning. In event of a load being split, driver to receive same monthly wage as the month previous for two months, provided he has increased his own load 12 per cent. The \$52.25 and the rate of commission not to be changed.

There shall be no cessation of work, lockouts or sympathetic strikes during the life of this agreement. Controversies to be adjusted without cessation of work between representatives of both parties, or submitted to a joint arbitration committee; decision to be final.

**Manufacturing: Wood Products.**

HANOVER, ONT.—CERTAIN EMPLOYERS CALLED THE "EMPLOYERS' COMMITTEE" AND CERTAIN EMPLOYEES OF FURNITURE FACTORIES, CALLED THE "EMPLOYEES' COMMITTEE." Agreement to be

in effect from February 20, 1923 to February 20, 1924.

For summary of agreement see article "Strikes and Lockouts in Canada in February, 1923," on page 239 of this issue.

**PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1923.**

THE movement in prices during the month was slight, both the index number of wholesale prices and the family budget in terms of retail prices of foods, fuel and rent being only a little above January levels. The increase in the wholesale prices index was due chiefly to increases in agricultural products and foods and in building materials, though most other groups except dairy products and house furnishings were somewhat higher. The fuel group was lower owing to a decline in the price of Connellsville coke.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.53 at the beginning of February as compared with \$10.52 at the beginning of January; \$10.61 for February 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); and \$7.75 for February, 1914. The total for food, fuel, and rent averaged \$21.23 at the beginning of February as compared with \$21.18 at the beginning of January; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); and \$14.54 for February, 1914. Butter and cheese were substantially higher with smaller increases in beef, milk, flour, sugar, and potatoes. The greatest decline occurred in eggs, though pork, bacon, and lard were slightly lower. Fuel was slightly higher, while rent was unchanged.

A comparison of fuel prices with previous years shows that while prices in February were somewhat higher than a year ago, they were lower than in Feb-

ruary, 1921, the period when fuel prices reached the peak and began to recede.

Anthracite coal averaged \$18.71 per ton at the beginning of February as compared with \$17.44 a year ago and \$19.71 for February, 1921. Soft coal averaged \$11.93 per ton in February, 1923, \$11.28 in February, 1922, and \$14.63 in February, 1921.

In hardwood, stove lengths averaged \$15.05 per cord in February as compared with \$14.72 in February, 1922, and \$16.25 in February, 1921. Soft wood, stove lengths, averaged \$11.78 in February, 1923, \$11.30 in February, 1922, and \$12.85 in February, 1921.

In wholesale prices the Departmental index number stood at 224.3 in February as compared with 223.0 for January; 229.5 for February, 1922; 270.1 for February, 1921; 356.6 for May, 1920 (the peak); and 136.6 for February, 1914. The most important increases were in wheat, oats, flaxseed, bran and shorts, cattle, sheep, butter, sugar, raw cotton, linseed oil, paint, and raw rubber, and small increases in fowl, fruits, vegetables, raw silk, some metals, nails, copper wire, silver plated cutlery, and in furniture. The most important declines occurred in Ontario barley, live and dressed hogs, eggs, bar silver, Connellsville coke, and in crockery. Compared with a year ago dairy products, miscellaneous groceries, textiles, hides and leather, metals and implements, and fuel were higher.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of

the percentages of current prices for the several commodities in relation to the average prices for the base period, 1890-1899, these being, therefore, made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

A special index number (comprising fifty of the more important commodities select from the 271 in the Departmental list) including twenty foods, fifteen raw materials, and fifteen manufactured good, based upon price levels in 1913 as 100, advanced to 155.2 in February as compared with 153.1 in January; 148.4 in February, 1922; 192.2 in February, 1921; 237.0 in February, 1920; and 102.9 in February, 1914. The increase was due mostly to advances in wheat, oats, cattle, sheep, butter, potatoes, sugar, cotton, and linseed oil.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board which includes thirty three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, and based upon price levels in 1913 as 100, stood at 149 in January as compared with 147 in December, 1922; and 144 in January, 1922. Goods produced, goods imported, goods exported, raw materials, producers' goods, and consumers' goods were all higher.

The Canadian Bank of Commerce index numbers of imports and exports both declined due to seasonal changes. The former now stands at 165.11 as compared with 165.29 in January and the latter at 150.70 as compared with 151.97 in January. The combined index of imports and exports fell from 158.63 in January to 157.90 in February.

Professor Michell's revised index number of wholesale prices in Canada from 1919 to date based on forty articles, twenty foods and twenty manufacturer's goods, with prices during 1900 to 1909 as 100, advanced to 176.3 in February as compared with 171.9 in January; 170.2 in December, 1922; and 163.7 in February, 1922. Both foods and manufacturer's goods advanced.

#### Retail Prices.

Beef again averaged higher. Sirloin steak advanced from 26.7c per pound in the average to 27.3c, being higher in all provinces except Quebec and Manitoba. Round steak advanced from 21.7c per pound to 22.3c. The advance was general in all provinces. Shoulder roast was  $\frac{1}{2}$ c per pound higher in the average at 14.9c. Stewing beef was up slightly at 11.3c per pound. Veal was unchanged in the average, advances in some localities being offset by declines in others. Mutton, leg roast, averaged 27.4c in February as compared with 27.2c in January. Fresh pork, roast, declined slightly from an average of 26.7c per pound to 26.6c. Salt pork and bacon also were lower, the former at 25.3c per pound and the latter at 40.6c per pound. Boiled ham declined from an average of 60.5c per pound in January to 60.1c in February. In fresh fish, cod declined while halibut advanced. Salt herring and salt cod advanced slightly. Lard was practically unchanged.

Fresh eggs averaged considerably lower in February at 55.3c per dozen as compared with 63.3c in January and 60.3c in December, 1922. Prices in nearly all localities were lower. Cooking eggs similarly declined from 46.6c per dozen to 43.2c. Milk advanced at Three Rivers, Sherbrooke, St. Hyacinthe, and Stratford, but declined slightly at New Westminster. Butter showed a general advance, dairy being up from 40.5c per pound in January to 41.2c in February and creamery from 45.5c per pound in January to 47.2c in February. Cheese

\*Preliminary figures. †Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.

noted in the market for pickled fish. European demand for canned lobsters continued dull and no improvement in prices was noted. Whitefish advanced from 12c per pound to 14c.

**FRUITS AND VEGETABLES.**—Bananas at Toronto were slightly lower at 8½c per pound. Lemons advanced from \$4.50 per box to \$6, and oranges from \$5 per box to \$5.75. Evaporated apples declined from 18c per pound to 14½c. Currants were slightly higher at 17c per pound. Potatoes at Toronto advanced from 90c per ninety pound bag to \$1.10. Onions advanced 50c per hundred pound bag to \$2. Turnips were up from 50c per seventy-five pound bag to 70c.

**MISCELLANEOUS FOODS.**—Most grades of tea were up about 5 per cent. Granulated sugar advanced from \$8.54 per hundred pounds to \$10.39. Barbados molasses rose 7c per gallon to 80c.

**TEXTILES.**—Woollens were steady. Raw cotton advanced from 27.75c per pound to 28.20c. Woven coloured fabrics showed an average advance of 1c per pound to 79.85c. Other lines of manufactured cottons showed advances of from 7c to 10 per pound. Raw silk at New York was 20c per pound higher at \$8.70. Jute was slightly lower at 10.15c per pound.

**HIDES, LEATHER, BOOTS, AND SHOES.**—Hides were steady.

**METALS AND IMPLEMENTS.**—Pig iron at Montreal advanced \$1 per ton to \$35.95. Bar iron rose from \$3.40 per hundred pounds to \$3.50. Wrought iron, old material, rose \$1 per ton to \$14. Steel bar advanced 30c per hundred pounds to \$3.45. Aluminum, lead, and tin advanced. Roll brass rose from 29½c per pound to 30c. Quicksilver declined \$2 per seventy-five pound flask

to \$70. Bar silver at New York declined from 67½c per ounce to 63⅞c. Solder bar advanced from 26½c per pound to 27½c.

**FUEL AND LIGHTING.**—Connellsville coke at the ovens declined from \$9.00-\$9.25 per ton to \$8.00-\$8.50. Coal was steady.

**BUILDING MATERIALS.**—Spruce deals at St. John were up \$1 per M to \$28. Red oak declined from \$135 per M to \$130. Rough lumber at Victoria rose from \$16 per M to \$19 and flooring from \$55 per M. to \$60. Shingles were 25c per M higher at \$4. Iron pipe rose from \$12.75 per hundred feet to \$13.26. Wire nails advanced 10c per keg to \$4.10. Sash cord was up from 61c per pound to 64c. Copper wire at New York advanced from 16¾c per pound to 17½c. Iron wire at Montreal was 20c per hundred pounds higher at \$4. Linseed oil rose from \$1.09 per gallon to \$1.15. Paint was up from \$3.70-\$4.05 per gallon to \$3.85-\$4.20. Putty advanced from \$4.45 per hundred pounds to \$4.95.

**HOUSE FURNISHINGS.**—Kitchen chairs declined, but furniture with mirrors advanced somewhat due to advances in plate glass because of the demand for plate glass for automobiles. Earthenware declined from ten per cent to twenty per cent, while silver-plated ware advanced from ten per cent to fifteen per cent.

**DRUGS AND CHEMICALS.**—Most lines of chemicals remained steady.

**MISCELLANEOUS.**—Raw furs were steady. Binder twine advanced from 11½c per pound to 11⅝c. Raw rubber at New York advanced from 27c per pound to 30¼c.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES.

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number of wholesale prices (1913=100) stood at 157.1 for January, an increase of nine-tenths of one per cent as compared with the average in December. Food prices rose by 0.5 per cent and materials by 1.2 per cent. All groups showed increases with the exception of "metals and minerals other than iron and steel", and the miscellaneous group. Compared with prices in January one year ago, foods dropped 7.2 per cent, the largest decrease being one of 14.3 per cent in "foods other than cereals, meat and fish," due to the fall in prices of potatoes and onions. During the same period industrial materials decreased 2.4 per cent, decreases in metals and minerals being largely offset by increases in the textile groups.

The *Economist* index number of wholesale prices on the base 1901-05=100, was 78 points or 1.8 per cent higher at the end of February than at the end of January, and reached the highest point recorded since the end of November, 1921. Cereals and meat decreased in price, 1.5 per cent, while other foods, tea, sugar, etc., increased 4.8 per cent; textiles decreased 0.4 per cent; minerals rose 7.8 per cent, and the miscellaneous group rose 0.02 per cent.

The *Statist* index number, in continuation of Sauerbeck's figures showed

a slight upward turn in January, registering 130.2 as against 129.1 at the end of December and 130.6 at the end of November. During January, foodstuffs declined in price 1.3 per cent, animal and vegetable foods contributing to the decrease but sugar, coffee and tea advancing 1.6 per cent. Materials advanced 2.4 per cent after the decline of 2.5 per cent in December. All three groups contributed to the advance, the strongest being minerals, which rose 3.3 per cent.

**COST OF LIVING.**—The index number compiled by the Ministry of Labour was 177 at February 1, a decrease of one point from the level of January 1, and the lowest figure since May, 1917. Foods decreased 2 points during the month and all other groups showed no change.

### Austria

**COST OF LIVING.**—The cost of living in Austria continued in November and December the decline begun in October following the signing of the protocols by the sub-committee of the League of Nations on Austrian finance, the budget of one person at Vienna, according to the index number of the Paritätische Kommission decreasing from 1,036,308 in October to 970,083 in November and 937,528 in December. In these two months the index number for foods declined from 1,188,575 to 1,051,900, and that for clothing from 1,761,600 to 1,582,900. Heat and light was 7 per cent cheaper in November and 5 per cent dearer again in December. Rents were stabilized until quite recently by law, so that even in September rentals were only 33 times the pre-war level. By a new bill enforced in the autumn, however, the raising of house rentals was legalized to the extent that owners might demand 250 times the pre-war rent in paper kronen. The index number

then rose to 6300 in October, 11600 in November and 16600 in December.

#### Belgium

**WHOLESALE PRICES.**—The official index number of wholesale prices of the Ministry of Industry and Labour showed that prices were firmer during December with a slightly lowering tendency. The total index (April, 1914=100) was 407, or one point above the November level. Increases were shown in the groups—tar and its products, chemical products, fertilizers, construction materials, and rubber. Decreases were shown in foods, petrol and its products, clay products, textiles, and resin products, and the following groups showed no change from the level of the previous month: fuel, metals, glass products, fats, hides and leather, tobacco, and paper and paper products. The most noticeable increases were one of 5 per cent in chemical products, and one of 10 per cent in raw rubber, the latter of which was more than doubled since June, 1922. The greatest drop during the month was one of 9 per cent in resin products.

**RETAIL PRICES.**—Among the index numbers compiled by the Ministry of Industry and Labour for January the simple index for the Kingdom declined one point to 383 (April, 1914=100), and the weighted index of 30 foods showed a decrease of 4 points, to 425.

#### Bulgaria

**WHOLESALE PRICES.**—The index number published by the Director General of Statistics (1913=100) showed an increase of 2.6 per cent or 66 points during December, reaching the level of 2630. The average for the year 1922 was 2473, as compared with 2006 for 1921.

**RETAIL PRICES.**—The official index number of retail prices of 47 articles (foods, with some items for fuel, soap and tobacco), on the base average of prices in 1901-1910=100, was 3520 in November, an increase of 0.5 per cent

on the revised figure of 3501 for October.

#### Czecho-Slovakia

**WHOLESALE PRICES.**—The index number of wholesale prices published by the Narodni Listy (July, 1914=100) dropped 0.8 per cent during December to 949.

**COST OF LIVING.**—The index number calculated by the Government statistical office showed for the group foods, fuel and soap, a decline of 2.2 per cent, to 962, and for the textiles group, a decline of 4.2 per cent to 1107.

#### Denmark

**COST OF LIVING.**—The official index number of cost of living of a working-man's family in Denmark is compiled by the Department of Statistics and is for a standard budget for a family of five, on the base July, 1914=100. The index number is published half yearly and is the average of two successive quarters for food, heating and lighting, and clothing, and a half yearly statement for the other groups. The figures for January, 1923, are as follows: food, 180; clothing (including footwear and laundry), 220; housing, 155; fuel and lighting, 277; taxes and subscriptions, 269; sundries, 203, and the total budget, 198. Thus food shows a decline of 2.2 per cent; and fuel and light of 8 per cent; clothing has advanced 1.4 per cent and taxes 5.5 per cent. Housing and sundries show no change from the July level. The total index number has declined one point or 0.5 per cent.

#### France

**WHOLESALE PRICES.**—The index number of the Statistique Générale (1901=100) rose to 447.3 or nearly 6.9 per cent on the previous month's level at the end of January. All groups showed large increases in price with the exception of animal foods, which rose only 0.9 points. The combined figure for foods rose 5.1 per cent and that for industrial materials rose 8 per cent. By the end of

February the prices continuing to increase sharply had reached the level of 487.6, or 9 per cent above the January level.

### Germany

WHOLESALE PRICES.—Prices rose in January with great rapidity, as shown by the *Frankfurter Zeitung's* wholesale prices index number, the all commodities index showing prices in paper marks to have increased from 205,417 at January 1 to 715,881 at February 1, or 248 per

cent on the former level. In the following table prices by groups are given, together with the index of the gold dollar in marks. By dividing the gold index into the commodity indexes relative gold prices of commodities may be obtained from the table. It will be seen that the gold prices of manufactured goods were at February, almost 50 per cent less than pre-war gold prices. The gold prices of all commodities at February 1 were about 75 per cent of pre-war gold prices.

	Gold	Food	Textiles and leather	Minerals	Miscel- laneous	Manu- factured goods	All 98 commo- dities
July, 1914.....	100	100	100	100	100	100	100
January 1, 1920.....	1,190	1,972	2,611	2,749	1,101	1,465	1,965
January 1, 1921.....	1,771	2,019	2,325	2,780	1,776	1,704	2,130
January 1, 1922.....	4,476	3,840	5,789	5,178	3,149	3,847	4,217
January 1, 1923.....	204,464	175,845	320,632	262,212	177,752	151,793	205,417
February 1, 1923.....	952,381	555,005	1,431,673	931,239	534,734	476,564	715,881

COST OF LIVING.—The official index number calculated by the Federal Statistical Office (1913—14=100) for all items (including clothing) increased from 68,506 in December to 112,027 in January, or 63.5 per cent. Foods rose from 80,702 to 136,600 or 69.2 per cent, and the cost of food, heat and light and rent combined rose 69.1 per cent. The rent restriction law still operative in Germany forbids the raising of rents (except for new houses) to more than thirty times the pre-war price. Consequently the index number of rents is only a small fraction of the other items in the budget, being 1133 in November and December.

### Spain

WHOLESALE PRICES.—The new official index number of the Institute of Geography and Statistics is based on prices in 1913=100. It is for 74 commodities—36 foods and 38 industrial materials, and is weighted indirectly. The groups are as follows—foods: animal foods; vegetable foods; other foods and drink—industrial materials: fuel, gas and electric current; textiles and leather; metals; construction materials; chemical

products and miscellaneous. The general index is the simple average of the indexes of the two subdivisions.

1913=100

	Foods	Industrial materials	General Index
1914.....	101	100	101
1915.....	104	125	119
1916.....	122	158	141
1917.....	137	194	166
1918.....	165	247	207
1919.....	179	228	204
1920.....	205	237	221
1921.....	181	199	190
1922—January.....	175	184	180
April.....	179	181	180
July.....	172	178	175
October.....	171	173	172
November.....	174	173	174
December.....	173	171	172

RETAIL PRICES.—The new index number of the Institute of Geography and Statistics is compiled for Madrid and Barcelona separately. The index for Madrid includes 10 animal foods, 9 vegetable foods, and for fuel and sundries, 8 articles. The index for Barcelona

\* For South Africa, Australia and New Zealand base is taken as 1000 instead of 100. *a*. Average for year. *b*. Quarter beginning in specified month. *c*. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. *d*. New index number is joined to old index number (38 commodities) and all converted to base 1913-100. For the years 1920 and 1921, 76 quotations are included, and from January, 1922, 100 quotations. *e*. The commodities in these two index numbers are in the one case, articles chiefly exported, in the other case, articles chiefly imported. *f*. First of month. *g*. Middle of month. *h*. End of month. *j*. Monthly average. *k*. Now Göteborgs Handels och Sjöfartstidning.

#### India

**COST OF LIVING.**—The official index number of cost of living at Bombay compiled by the Bombay Labour Office fell 5 points in January, to 156 on the base July, 1914=100, which brings it nearly down to the level of August, 1918. There was during the month under review a fall of 6 points in food articles, all food grains declining with the exception of gram which showed no change. Sugar, salt, potatoes and onions all decreased in price. Fuel and lighting declined one point, clothing showed a slight advance, and house rent remained unchanged from the previous month.

**WHOLESALE PRICES.**—Bombay — The Labour Office Secretariat publishes in the *Bombay Labour Gazette* an index number of wholesale prices in Bombay. It is "based on carefully collected market prices and is indirectly weighted. Food articles number 15 and non-food 28. The base is the pre-war month, July, 1914. The index is published at the request of business firms in Bombay in

such a way as to show the relative level of average wholesale prices, and the groups have been selected primarily with a view to suit the conditions of Bombay's trade." The index number is also published each month expressing the price levels as percentages of the twelve monthly averages of 1921. For food articles, non-food articles, and all articles at intervals during the past year the index is as follows:—

	15 foods	28 non-foods	General average
1920—January.....	215	241	331
July.....	216	222	220
1921—January.....	185	195	191
April.....	199	198	198
July.....	191	203	199
October.....	189	199	195
1922—January.....	188	190	190
April.....	193	185	188
July.....	188	188	188
October.....	178	172	174
November.....	176	177	176

#### United States

**WHOLESALE PRICES.**—The index number calculated by the Federal Reserve Board, with prices in 1913=100, was 163 for January, an increase of 1.2 per cent on the December level. Goods produced rose  $1\frac{1}{4}$  per cent, and goods imported rose 0.7 per cent. Goods exported increased 3.4 per cent. Raw materials increased 3 per cent and producers' goods increased 0.7 per cent. Consumers' goods decreased in price 0.6 per cent.

The index number of the Bureau of Labour Statistics was at the same level for January as for the two previous months. All groups advanced with the exception of farm products, which declined  $1\frac{1}{4}$  per cent and foods, which declined 2 per cent. Prices in January, 1923, as compared with those of a year

ago show increases in building materials of  $19\frac{3}{4}$  per cent; metals and metal products,  $18\frac{3}{4}$  per cent; farm products,  $7\frac{1}{4}$  per cent; fuel and lighting materials,  $11\frac{3}{4}$  per cent; cloths and clothing,  $11\frac{1}{4}$  per cent; while foods, chemicals and drugs, house furnishing goods, and miscellaneous commodities showed smaller increases.

*Gibson's* average index number of wholesale prices of twenty-two articles of food decreased 0.1 points or one-seventh of one per cent for February, reaching the level of 71.9.

*Dun's* index number of wholesale commodity quotations which reached \$185.462 at December 1, increased slightly in the two following months, reaching \$185.637 and \$186.250 at January 1 and February 1 respectively, advances of 0.1 and 0.3 per cent. In the breadstuffs group there were two suc-

cessive decreases, as was also the case with dairy and garden produce. Meat rose slightly in December and fell in January, and other foods showed two slight rises. Clothing and the miscellaneous group also rose twice. Metals declined slightly in December and rose again to a level at February 1 higher than that of December 1.

**COST OF LIVING.**—The index numbers of cost of living in Massachusetts compiled by the Special Commission on the Necessaries of Life were as follows for January, 1923, prices in 1913 being equal to 100. Food, 139.3; clothing, 178.0; shelter, 162.5; fuel, etc., 184.8; sundries, 168.8; combined, 157.1. Thus food, and clothing show decreases, and the other groups, no change from the level of the previous month. The combined index number has dropped one-quarter of one per cent.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA, IN 1922.

**T**HE present article contains tables with respect to fatal industrial accidents that occurred in Canada in 1922 with comparative figures for the year 1921. While an effort has been made to have the record as complete as possible it should be understood that it does not necessarily include all the fatal industrial accidents that may have occurred in the course of the year.

During the year reports of industrial fatalities were received by the Department from a number of sources, among which may be mentioned the following: For Canada, the Board of Railway Commissioners and the Explosives Division of the Department of Mines, Ottawa; for Nova Scotia, the

Workmen's Compensation Board, and the Department of Public Works and Mines; for New Brunswick, the Workmen's Compensation Board; for Quebec, the Department of Public Works and Labour, and the Bureau of Mines; for Ontario, the Factory Inspector, the Workmen's Compensation Board, the Ontario Railway and Municipal Board, the Algoma Central and Hudson Bay Railway, the Algoma Steel Corporation Limited, and the Lake Superior Paper Company; for Manitoba, the Bureau of Labour, and the Workmen's Compensation Board; for Saskatchewan, the Bureau of Labour; for Alberta, the Workmen's Compensation Board; and for British Columbia, the Department

of Mines, and the Workmen's Compensation Board.

According to the record, 1,107 deaths were due to industrial accidents in 1922 as compared with 922 in 1921. The transportation and public utilities group had the largest number of fatalities, there being 317 deaths, or 28.6 per cent of the total for all groups. Of these 141 or 12.7 per cent, occurred on the steam railways, and 88, or 7.9 per cent in water transportation. Seventy-one deaths occurred in the steam railway service through being struck by, run over or crushed by or between cars or engines, 24 were due to derailments and collisions, and 24 to falls from cars and engines. In the mining, non-ferrous smelting and quarrying group, there were reported 168 deaths, of which 97 occurred in the coal mining industry; falls of rock, stone, etc., and cave-ins accounting for 65 deaths, 37 deaths were due to explosions and 19 to mine and quarry cars. In the manufacturing industry there were 159 deaths recorded, 43 of which occurred in saw and planing mills, 39 in the industries of iron, steel and their products, and 10 in the vegetable foods, drink and tobacco group. In the saw and planing mills, 20 deaths were due to machinery and "prime movers" used in the working of machinery and 9 were due to "flying objects" including wood rebounding from saws, etc. In the iron, steel and their products group, 7 deaths were due to trains and 5 were caused by infection. In the lumbering industry, 147 deaths were reported, of which 36 were due to falling trees, branches, etc., and 37 were due to

drowning. In the construction group, there were 145 deaths, 40 of which were due to falls and 32 to falling objects. The record of all the industries shows 69 deaths due to machinery and "prime movers", 39 due to hoisting apparatus, and 118 to dangerous substances, among which are included steam escapes and boiler explosions, 6, explosive substances, 58, and electric currents, 41. There were 124 deaths due to drownings, 26 to infection and 17 to asphyxiation.

The distribution according to provinces showed Ontario with the highest record, 469, while in British Columbia and Quebec there were 190 and 155 deaths respectively. In the monthly analysis the largest number was shown in December, there being 119 fatalities reported in that month, while in August there were 116. In the third quarter of the year there were 335 deaths reported and in the last quarter 326. Further particulars of these fatalities can be obtained from the quarterly statements appearing in the issues of the LABOUR GAZETTE for June, August and November, 1922, and February, 1923. In addition to the fatalities given in these quarterly statements five others have since been reported, all of which occurred in Ontario. These comprised a bushman killed by being struck by a tree, a motorman with a mining company killed by the overturning of a car, an engineer with a manufacturing company who fell through a trap door, a labourer at a creamery who received a fractured skull, and a sailor who was drowned.

## FATAL INDUSTRIAL ACCIDENTS DURING 1922, BY MONTHS.

## RECENT LEGAL DECISIONS AFFECTING LABOUR.

---

**T**HE legal decisions which are summarized below relate respectively to a case involving the appointment of medical practitioners under the Master and Servant Act of British Columbia, and two cases of Workmen's Compensation in Quebec. On page 288 of this issue.

the text of an important decision of the Judicial Committee of the Privy Council is given with reference to the power of the British Columbia Government to forbid the employment of Chinese and Japanese in lumber camps on lands leased from the province.

### **B. C. Master and Servant Act does not apply in appointment of physician if procedure laid down by Act is not followed.**

A physician in British Columbia brought an action against a fellow practitioner claiming a sum of money that had been paid into Court, which had been deducted from the wages of certain employees of the Western Fuel Corporation of Canada for medical attendance. The action was based on the Master and Servant Act of British Columbia, which provides that whenever 30 or more workmen or servants of any master shall request in writing that the master should deduct from the wages a sum to be paid to a medical practitioner for attendance upon them, it shall be the master's duty to give effect to the request. The Act further provides that before the above request is made a medical attendant shall be selected by such workmen, either present or represented by proxy at a special meeting of such workmen called for the purpose. The chairman and secretary of the meeting shall certify in writing the name of the physician selected and the amount to be deducted from the wages of each workman, and the certificate shall also be signed by the medical practitioner selected. It is also provided that workmen may change the physician at a like special

meeting, and that a certificate by the chairman and secretary signed by the new medical practitioner selected, shall be furnished to the employer.

The sum of money in dispute was awarded to the plaintiff in the County Court, and the defendant appealed against the decision. It was held by the Court of Appeal that the course adopted by the employees in selecting the plaintiff was not that pointed out by the Act. The course pursued was described as follows:

"A meeting of employees of the coal company was called at which a draft agreement with the plaintiff was approved. It does not appear what number of the employees were present, or whether of those present, all or only a majority approved the agreement. The agreement, when engrossed was signed by the president of the Miners' Committee and the president of the Artisans' Committee and by fifteen individuals. This agreement appears to have been acted upon from January 1, 1922, to the time when this dispute arose, apparently in March of the same year, since on March 21, a meeting of some of the employees was convened

and a resolution passed in the terms of the said amended Act of 1915. This meeting selected the defendant as their medical attendant and specified the sum to be deducted from their wages by the employer as remuneration for his services. These employees, to the number of 161, signed the request mentioned in said sec. 12. It therefore appears that on this date, March 21, 1922, these 161 employees made the statutory request and forwarded it and the requisite certificate mentioned in sec. 13 of the Act of 1915, to the employer, requesting that the sums therein mentioned should be deducted from their wages, and paid to the defendant Lane as their medical attendant."

The plaintiff admitted that the sum in dispute was money retained from

the wages of certain men whose names appeared on the notices purporting to appoint the defendant. It was held by the Court that the appointment of the plaintiff as medical attendant was not made in accordance with the provisions of the Act, in fact it appeared to have been made entirely outside the Act as a matter of agreement between himself and a meeting of some employees. When the procedure pointed out by the Statute is departed from, arrangements between men and physician have not the sanction of the Act and must stand or fall by the rules applicable to mere private arrangements.

The decision of the Court was therefore in favour of the defendant and his appeal was allowed.

(*British Columbia—Hall vs. Lane.*)

**Meat-cutting department of cold storage plant falls within Quebec Workmen's Compensation law.**

A workman who was employed in a cold storage plant in the province of Quebec met with an accident when filling a meat-cutting machine operated by electricity, losing all the fingers of his right hand. He brought an action against his employer under the Workmen's Compensation law of Quebec claiming the capital sum of an annual payment of \$800. The Superior Court awarded the workman a sum of \$3,081. The employer appealed against this award claiming among other things that his plant did not come under the law of Workmen's Compensation as it was a commercial not an industrial establishment.

In the judgment of the Court of King's Bench it was held that the storage and sale of food conducted by the employer was a commercial business but there was also carried on at the plant the work of converting the carcasses of animals into bacon, sausages, etc., and this part of the establishment where the workman was injured was industrial and came under the law of Workmen's Compensation.

The appeal of the employer was therefore dismissed with costs.

(*Quebec—E. P. Dupuis & Fils vs. Laplante.*)

**The work of loading and unloading freight cars falls within scope of Quebec Workmen's Compensation Act.**

An employee of a contractor for loading and unloading freight cars at Montreal fell when carrying a case of

sugar. He bruised his cheek and suffered shock. After his cheek was healed he continued to suffer from heart

disease. He brought an action in the Superior Court against his employer under the Workmen's Compensation Act, and was awarded the sum of \$2,008.80. The employer appealed against this judgment and the case was heard in the Court of King's Bench. The employer based his appeal on the ground that the case did not fall within the scope of the Workmen's Compensation Act, and further that the plaintiff's heart trouble did not result from the accident.

The Court declared in its judgment that the appellant was a contractor for loading and unloading freight cars, and

that this was an industrial enterprise within the meaning of the Workmen's Compensation Act. After the employee's cheek was healed the heart disease that remained diminished his working power by 30 per cent. The Court held that the proof was against the appellant in his contention that the heart trouble did not result from the accident as it was shown that the workman's incurable illness must be attributed to this cause.

The judgment of the Superior Court was therefore confirmed and the appeal was dismissed.

(*Quebec.—Gilbert vs. Scott*).

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.

DEPUTY MINISTER—F. A. ACLAND.

Volume 23

APRIL, 1923

Number 4

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

### This issue in brief

This issue of the LABOUR GAZETTE contains, in addition to the regular monthly articles, a statement made to the Dominion Parliament by the Minister of Labour in connection with the Draft Conventions and Recommendations of the third and fourth Sessions of the International Labour Conference; a comparative review of Workmen's Compensation legislation as existing in the various provinces at the present time; the text of the decision given by Mr. Justice Galt on March 10 affecting the legal status of the Brotherhood of Locomotive Engineers; and summaries of recent Minimum Wage orders in Ontario and Alberta.

Increasing activity was noted at the end of March in the general volume of employment throughout Canada. This was shown in the resumption of a demand for farm labour, especially in the Prairie Provinces. Building and construction work was delayed by the late winter, but some activity was already apparent. The manufacturing group also showed some improvement. Logging operations were suspended in many districts pending the opening of spring drives, but in British Columbia conditions in this group were gradually improving. At the beginning of March the percentage of unemployment among members of trade unions was 6.4 as compared with 7.8 at the beginning of Feb-

ruary and 10.6 at the beginning of March, 1922. The employment situation at the close of February as reflected in reports from employers showed a further increase in the number of employees, though additions to staff were much smaller than in January. Marked improvement was indicated in the manufacturing industries, but the gains were largely offset by continued curtailment of operations in transportation, construction and trade. The offices of the Employment Service of Canada reported that the increased activity noted in the previous month was maintained throughout February.

The average cost of a weekly family budget of 29 staple foods was \$10.79 at the beginning of March, as compared with \$10.53 in February, \$10.54 in March, 1922; \$13.23 in March, 1921; \$16.92 in June, 1920 (the highest point reached); and \$7.68 for March, 1914.

The time loss due to industrial disputes during March was less than in the previous month, or than in March, 1922. Fourteen disputes began or were in progress during the month, involving 1,416 employees and a time loss estimated at 33,824 days. These figures compare with 19 disputes in the previous month, involving 5,007 employees, or a time loss of 51,675 working days, and with 20 disputes in March, 1922, the latter involving 2,569 employees, with an

estimated loss of 62,737 working days. At the end of March twelve disputes, involving 1,305 employees, were in progress.

**Proceedings  
under the  
Industrial  
Disputes  
Investigation  
Act**

No reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received during March by the Department of Labour. Three applications for the establishment of Boards were received, and three Boards were established during the month.

**Jottings**

Conventions of the following international and Canadian labour organizations will be held during the months of May and June:—

United Cloth Hat and Cap Makers, of North America, at New York, N.Y., on May 1.

International Longshoremen's Association, at Boston, Mass., on May 14 to 21.

American Federation of Musicians, at St. Louis, Mo., on May 14 to 21.

Boot and Shoe Workers' Union, at Montreal, Que., on May 18.

Canadian Association of Stationary Engineers, at Toronto, Ont., on June 26 to 28.

Dominion Postal Clerks' Association, at Kingston, Ont., in June.

The tenth annual convention of the Association of Governmental Labour Officials of the United States and Canada will be held at Richmond, Virginia, on May 1 to 4.

The agreement between the Western Canada Coal Operators' Association and District 18 of the United Mine Workers of America, which was signed by representatives of the two organizations on March 15, was submitted to a vote of the members of the Union and on March 26 it was announced that the result of

the referendum was 4,769 votes in favour of the new agreement and 341 against it. The text of the agreement appeared in the March issue of the LABOUR GAZETTE on page 295.

It was stated in the Ontario legislature recently that the provincial government had in its employ 1,057 returned soldiers, 127 of whom were partially disabled cases. The salaries paid to them range from \$500 per annum for part time work to \$5,400.

During March proposals for securing immigrants for the province in co-operation with the Dominion Department of Immigration and Colonization were laid before the legislature of New Brunswick. It was suggested that the province submit to the Dominion Department a statement of its requirements both as the number of immigrants and their country of origin, and further that the province assume all responsibility for the immigrants after their arrival. The feeling of the House on these proposals was that the province at the present time has no need of immigrants, but rather requires a revival of industry which would "provide employment for the hundreds of young people now leaving practically every locality in the province."

According to an official statement in the Alberta legislature during the present session 5,976,195 tons of coal were mined in the province in 1922 as compared with 5,937,195 tons in 1921. A provincial tax of five cents per ton was levied during 1921 on coal removed from the mine premises, the rate of taxation remaining unchanged for the first three months of 1922, after which it was raised to 10 cents per ton. Coal which is given or sold by mine owners to their employees for domestic consumption, and coal passed through a screen with holes of a diameter of one inch or less, or through a screen with bars three-quarters of an inch apart, or less, provided that such coal is sold at the rate of \$1 per ton or less, is exempt from taxation. The sum realized from the

tax was \$282,690 during 1922 and \$275,928 during 1921.

The Alberta Department of Education, in order to facilitate the placing of unemployed teachers in positions, provides the teachers with lists of vacancies in schools and supplies school boards with the names of teachers seeking engagements. As appointments are made by the school boards no records exist of the number of teachers placed through this service. The Department, it is stated, has not considered making use of the Government Employment Bureaus for the placing of teachers.

In connection with the relief of distress the Government of Alberta spent during 1922 the sum of \$290,203, including advances for hay, direct personal relief and free freight. It was stated in the Legislature that of this total amount the sum of \$94,873 will be collected from the Dominion Government and the railway companies.

The labour cost of installing rural telephones for the Alberta telephone department is given at \$73 per telephone in 1922, as compared with \$145 per telephone in 1921; \$163 per telephone in 1920; and \$107 per telephone in 1914. The sum of \$445,308 was saved on the 1922 construction program over the prices of 1921.

The Works Committee of the Toronto City Council has decided that in future when a permit for a street corner news stand is cancelled, a disabled returned soldier shall receive the rights to sell papers on that corner thereafter. Three permits were granted to disabled veterans.

A general survey of wage changes in the United States made by the National Industrial Conference Board, New York, shows that the average hourly earnings of all wage earners had increased from \$.238 in July, 1914, to \$.495 in September, 1922, an increase of 108 per cent, and average weekly earnings had increased 95 per cent in the same period or from \$12.27 to \$23.88.

Dr. Royal A. Meeker has resigned his position as Chief of the Scientific Division of the International Labour Organization (League of Nations) at Geneva to take up the office of State Commissioner of Labour and Industry of Pennsylvania. Prior to his appointment to the International Labour Office on August 1, 1920, on a three-year contract, Dr. Meeker was head of the Bureau of Labour Statistics of the United States Department of Labour at Washington.

An agreement recently arranged between a manufacturer and the International Ladies' Garment Workers' Union provides for the arbitration of all disputes by an impartial chairman who has been agreed upon by both parties. The agreement also provides that no strikes or stoppages of work shall take place. This employer had been operating a non-union shop and he agreed to unionize his shop only on the assurance that there would never be any stoppages of work.

A year ago the United States Public Health Service announced that it had completed arrangements to expand the medical aid service to American seamen, by prescribing by radio for any sailor who might be taken ill at sea and who might apply. Messages for aid were to be forwarded to the Service by the ship's radio via the Radio Corporation of America or the Independent Wireless Telegraph Company. Included among the diseases and mishaps for which aid has been invoked during the first year are appendicitis, asthma, cramps, diarrhoea, ear ache, eye injuries, heart disease, hernia, hiccoughs, influenza, infected teeth, malaria, opium poisoning, ptomaine poisoning, and swallowing broken glass.

At the International Trade Union Congress which met at Berlin from December 25, 1922, to January 3, 1923, it was decided to found a new Trade Union International under the title of the International Association of Workers.

A number of laws relating to labour matters are under consideration by the French Chambers of Deputies. A bill for the settlement of collective labour disputes and compulsory arbitration in disputes affecting public services which was introduced by the Government in March 1920 had been placed on the agenda of the Chamber but had been temporarily withdrawn; bills for the ratification of conventions of the International Labour Conference concerning the night work of women and young persons were before the Labour Committee of the Chamber.

The Government of the Esthonian Republic has announced its ratification of the following Conventions adopted by the International Labour Conference (League of Nations) at Genoa in 1920: Fixing the minimum age for admission of children to employment at sea; concerning unemployment indemnity in case of loss or foundering of a ship; establishing facilities for finding employment for seamen. The Esthonian government has also announced its adhesion to the International Convention of September 26, 1906, relative to the use of white phosphorus in the manufacture of matches.

A decree has been promulgated in Japan prescribing the institution of a permanent imperial office to deal with matters relating to the International Labour Organization. The office will be installed at the seat of the International Labour Office and will be under the direction of the delegate of the Japanese Government to the Governing Body of the International Labour Office.

According to recent press despatches, the Swiss Government has appropriated 500,000 francs for the purpose of assisting the emigration of Swiss farmers to Canada, and will spend the appropriation for the establishment of colonies in the Canadian West. A representative of Swiss emigration societies has been

in Canada in the interests of the scheme.

**Agenda for  
fifth session  
of the Interna-  
tional Labour  
Conference**

The Governing Body of the International Labour Office, which, under Article 400 of the Treaty of Peace, is charged with the duty of drawing up the agenda of sessions of the General Conference of Representatives of the members of the International Labour Organization, has decided to include the following items in the agenda of the Fifth Session of the Conference, which will convene at Geneva on October 18, 1923: (1) Development of facilities for the utilization of workers' leisure hours. (2) General principles for the organization of factory inspection. (3) Equality of treatment for national and foreign workers as regards workmen's compensation for accidents. (4) Weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used. At the same time, the Governing Body decided to consider at its eighteenth session, on April 10, whether two further subjects which it was not in a position to deal with immediately, namely, the question of night work in bakeries, and the question of anthrax, should be added to the above agenda.

**Meeting of  
Governing  
Body of  
International  
Labour Office**

Mrs. James Carruthers, of London, England, widely known by her writings as Violet Markham, was appointed as a substitute for the Minister of Labour to attend the eighteenth meeting of the Governing Body of the International Labour Office which opened in Geneva on April 10, 1923. Mrs. Carruthers, although resident in England, has visited extensively in Canada and is the author of a volume dealing with factory and shop legislation of the British Dominions.

**Proposed  
amendments  
to Industrial  
Disputes  
Investigation  
Act**

The Minister of Labour introduced in the House of Commons on March 21, 1923, a bill to amend the Industrial Disputes Investigation Act. The amend-

ments in question relate to three sections of the present Act, namely, 15, 57 and 58 respectively. The proposed changes do not involve any alteration in the purpose of the statute and the intention is, as the matter was explained by the Minister of Labour in Parliament, "simply to convey more clearly the intent of these sections as they now stand and have been understood for a number of years." The amendment to section 15 will involve a slight change in the form of statutory declaration which is required of applicants for Boards of Conciliation and Investigation before such Boards are established. Under the section in its present wording it is required that a declaration shall be made setting forth among other things that the dispute has been a subject of negotiation between the employer and the workers' committee. It has been represented that cases occasionally arise in which no actual negotiations have occurred because of the unwillingness of one of the parties to negotiate. It is proposed in the present bill to deal with this contingency in order that parties may not be prevented from having a dispute referred to a Board under such circumstances. The amendments to sections 57 and 58 relate to the requirements of the statute in its present form that employers and employees in the classes of industry to which the law applies shall give thirty days' notice of any intended change in wages or hours and that in the event of any such intended change resulting in a dispute the change shall not be put into effect until the dispute has been dealt with by a Board and the report of the latter has been communicated through the Department of Labour to the parties affected. Section 57 also forbids the parties from being concerned in either a strike or lockout or a suspension or discon-

tinuance of work and directs that the relationship of employer and employee shall continue uninterrupted by the dispute until the Board has reported. It is proposed in the present bill to introduce the following words after the word "dispute" in the fourth line of section 57: "it shall be unlawful for the employer to make effective a proposed change in wages or hours or for the employees to go on strike," and after the word "affected" in the seventh line the following words: "the application for the appointment of a Board shall be made by the employers or employees proposing the change in wages or hours." The amendment to section 58 dealing with penalties is intended to bring this section into conformity with section 57 in its amended form.

**Railway  
statistics  
for 1922**

A summary report of the Dominion Bureau of Statistics on statistics of steam railways of Canada with annual operating revenues of \$500,000 or over, for the calendar year 1922, gives the ratio of payroll to operating revenues as 51.6 per cent as compared with 53.3 per cent in 1921; and the ratio of payroll to operating expenses as 57.9 in both years. In 1922, the total amount of payroll was \$225,864,428, and in 1921, \$241,319,992, and the number of employees was 155,887 in 1922 and 156,786 in 1921, which shows a reduction of 6.4 per cent in the amount of payroll and a decrease of less than one per cent in the average number of employees. The ratio of operating expenses to revenue was 89.16 per cent in 1922 and 91.95 per cent in the previous year.

The report states that the strikes in union coal mines in the United States between April and August greatly curtailed the imports of coal and threw additional burden on the railways to overcome the lack of storage piles throughout the country when their energies were required to move the huge harvest. There were no strikes, however, on the Canadian railways, working

conditions and wage schedules having been amicably arranged, and the grain was handled expeditiously. Over 12,750,000 bushels of grain moved westward and was exported from Vancouver. During May, 1922, working conditions were rearranged, providing for payment of the ninth and tenth hour on a pro rata rate, instead of a punitive rate, for maintenance of way employees. Also certain federated shop craft employees' pay for holidays other than New Year's, Labour Day and Christmas, were rearranged on a straight time basis instead of on punitive rates. Straight time was also applied to Sunday work under certain conditions. Somewhat similar arrangements were made in June with clerks, other office and station employees and labourers. During July rates of wages of maintenance of way employees were cut one to five cents per hour and in November these were increased one to three cents. In August, federated craft employees' wage rates were cut seven to nine cents per hour, and on November 1 clerks and certain other office and station employees' rates were reduced approximately one cent per hour. The same changes were not made on all roads or at the same time but the above were stated to be the most important alterations.

**Action of  
Alberta  
legislature to  
lower freight  
rates on coal  
for Ontario**

The Legislature of Alberta passed a resolution on March 19 instructing the Provincial Government "to request the co-operation of the Federal

Government in negotiating with the transeontinental railways with a view to securing a freight rate that will enable Alberta coal to enter the Ontario market in competition with American coal, in order that as far as possible the Canadian people may use coal produced in Canada". In the preamble to the resolution it is claimed that Alberta possesses 87 per cent of the coal areas of the Dominion; that the coal mines now operating in the Province have a

capacity for over twice the output demanded by the markets at present available; that considerable unemployment is created by restricted markets and the industry is generally on an unsatisfactory basis; that anthracite is becoming more difficult to secure in the Central Provinces; and that it has been satisfactorily demonstrated that Alberta coal can replace anthracite wherever freight rates will permit of competition.

**Alberta  
government  
instructed to  
urge completion  
of branch  
railway lines**

The Legislature of Alberta, on March 15, passed a resolution instructing the Provincial Government to impress upon the Board of Directors of the Canadian National Railways, and also upon the management of the Canadian Pacific Railway the urgent necessity of laying steel on completed grades and resuming grading operations on the branch lines in the Province which are still incomplete but on which grading work has already been done. The resolution affirmed that "immediate commencement of work on these lines and the completion of the same would place a large number of men who are at present out of employment in a position to be self-supporting, and would give a much needed railway service to a considerable number of farming districts".

**Fishermen  
and workmen's  
compensation  
in Nova Scotia**

The position of the fishing industry under the Workmen's Compensation Act of Nova Scotia is reported to be under consideration by the Provincial Board as a result of representations made to the Board during March that the burdens laid upon the industry under the Act were heavier than it could carry. At a meeting held earlier in the month the captains and owners of fishing vessels at Lunenburg declared themselves in favour of break-

ing away from the Board and forming an independent mutual benefit association whereby the fishermen and their dependants would secure comeprnsation equal to that provided under the Act. Later they decided to seek from the Board a series of concessions, and to await the Board's decision before proceeding to form the proposed association. The concessions asked were as follows: 1. Deferred payments of assessments; 2. Cost of medical attendance upon claimants while in hospital in Newfoundland to be pooled, and paid for by all the vessels in proportion; 3. A more simple audit; 4. A lower rate of assessment; 5. Assessment to be charged against gross stock. The Nova Scotia Workmen's Compensation Act, under an amendment of 1919, provides that an industry carried on out of Nova Scotia may be brought within the scope of the act upon the application of the employer on the issue by the Board of a certificate to that effect, but only during the period of, and subject to the terms stated in such certificate. Under this provision workmen or their dependants are entitled to compensation in connection with accidents which happen outside the Province. Fishermen working on shares are considered as "workmen" for the purposes of the Act.

**Employers criticise workmen's compensation**      The Canadian Lumbermen's Association, at their recent convention at Montreal passed a resolution favouring the amendment of the Workmen's Compensation Acts of those provinces where the acts are administered by Boards, so as to correct certain alleged defects. These defects were stated to consist in (1) Charging the full amount for the accident to the year in which the accident occurred, when payments in permanent disability and death cases are payable in from one to twenty years; (2) Paying of all medical fees by the Board, advantage of which is taken by some unscrupulous doctors to encourage

malingering by the workmen; (3) The absence of the fundamental principle of contribution by the beneficiaries; (4) The injection of class representation into the personnel of the administrative Boards. The resolution further suggested that where inexcusable fault is proved on the part of the employee, the employer be not held responsible providing the employer has used due diligence in providing all the necessary safeguards to protect employees.

**Alberta mine owners and workmen's compensation**      A delegation from the Western Canada Coal Operators' Association waited upon the Provincial Premier and members of the Cabinet of Alberta early in March to protest against the Government proposal to amend the Workmen's Compensation Act by increasing the rate of compensation from 55 per cent to 66 2/3 per cent of wages. The operators represented that while it was claimed that the proposed increase merely brought the Alberta scale to the same level as the scales now in force under the acts of British Columbia, Manitoba, Ontario and Nova Scotia, conditions in regard to wages in Alberta differed widely from those in the other Provinces; in Manitoba and Ontario, for instance, where the 66 2/3 percentage is maintained, there were practically no coal mines, and the average wage of the metalliferous miners was about \$4.50 per day, instead of \$6 per day as in Alberta. In British Columbia, it was claimed, the scale of wages was lower than in Alberta. The statement was made that in the United States, out of forty states with compensation acts only six had the 66 2/3 per cent basis, and in those states the maximum payments were limited to \$16.67 per week, whereas in Alberta, even on the present 55 per cent basis the maximum payment allowed for compensation was \$21.70 per week. The operators further claimed that compensation should not be on the basis of wages but should rather be calculated on the basis of the average amount of money required to sustain the

injured workman in idleness. Premier Greenfield, in his reply, said that the proposed increase would involve an additional charge against industry of only \$10,000 or about one-sixth of a cent per ton of coal mined in the Province, and that the operators themselves admitted that this liability would be passed on to the consuming public. He promised, however, that the Government would take into consideration the representations of the delegation. The proposed amending act will be outlined in a review of the work of the session, in a future issue of the LABOUR GAZETTE.

**Chinese  
workers and  
compensation**

Of the thirty-three men who were killed in the mine explosion at Cumberland, B.C., on February 7, nineteen were Chinese, and several others were listed as belonging to other countries than Canada. Under the Workmen's Compensation Act of British Columbia benefits are paid to the dependants of alien workers, the scale of indemnity being adjusted by the Board so that the amount actually received by such dependants is sufficient to maintain them in a condition of comfort similar to that of dependants in Canada benefitting under the Act. The original Act of 1916 provided the same compensation for the dependants of foreign workers residing abroad, as is allowed to the dependants of Canadian workers. Later it was found that this amount, while barely sufficient to meet the cost of living in Canada, enabled dependants in China to live in affluence. Accordingly, an amendment was made to the Act in 1919 to provide that when the dependants are aliens residing outside of Canada the Board may "award such lesser sum by way of compensation as, according to the condition and cost of living in the place of residence of such dependants, will in the opinion of the Board maintain them in a like degree of comfort as dependants of the same class residing in Canada and receiving the full compensation authorized by

the Act, would enjoy." Under this amendment, which was retroactive to January 1, 1917, the Board investigated the cost of living in China and found that an allowance of \$7.50 per month to a widow residing in China would equal in purchasing power an allowance to a Canadian widow of \$35 per month, and that a child could be maintained in China for \$1.50 instead of \$7.50, as in Canada. The payment of compensation to a widow of any class continues during her life or until she remarries, when she receives \$480 in lieu of further claims; children receive payment till they reach the age of sixteen years, whether or not the mother remarries. In this connection, Mr. E. S. H. Winn, chairman of the Board, recently pointed out that practically all Chinese workers are married, and that Chinese widows never marry a second time. Consequently a Chinese widow remains during her lifetime a charge on the employers of the Province. Mr. Winn also states that the proportion of expenditure tends to be higher on Chinese than on Canadian disability cases because a Chinese worker takes a longer time to recover from injuries.

**Provincial  
loans to student  
teachers in  
New Brunswick**

A marked increase in the number of students attending the Provincial Normal School was noted in the Speech from the Throne at the opening of the New Brunswick legislature in March. This increase, which is attributed to the recent measure authorizing loans to students, promises to make up the former deficiency in the supply of teachers for the public schools. The Schools Act of 1922 (chapter 5, section 6) gives the Board of Education power "to make loans to students who possess the necessary academic standing for admission, and who require financial assistance to enable them to complete a course at the Provincial Normal School, such loans not to exceed \$400 to any one student, to be made and to be repaid by such student in accordance with the

regulations made by the Board of Education; and to make such allowances for the travelling expense of student teachers attending the school as shall be deemed proper, but not exceeding \$24 to any one student teacher." A similar provision for student teachers in Alberta was referred to in the last issue of the LABOUR GAZETTE, on page 222.

Reference was also made in the course of the Speech to the progress of vocational education in the Province, many communities being reported as taking advantage of the assistance available for this purpose. New day schools for industrial training have been established. In furtherance of its policy of promoting vocational training the Provincial government has conducted educational surveys in several of the larger cities and towns.

**Nova Scotia  
miners'  
programme of  
legislation**

Amendments to the  
Coal Mines Regulation  
and the Workmen's  
Compensation Acts of

Nova Scotia were pro-

posed to the Provincial Government in March by a delegation representing District 26, United Mine Workers of America. It was requested that the employment of boys under the age of 16 years be forbidden either below or above ground, the existing permit system being abolished and the prohibition made absolute. (An amendment to the Coal Mines Regulation Act which would prohibit the employment of boys under 16 years of age is now before the Provincial Legislature.) The delegation further proposed that a miners' 8-hour day be established by law, instead of being as at present secured only by agreement with the employer. Other suggestions affecting the mining industry included provision for the election of mine inspectors by the underground workers of the inspection districts; the enlargement of travelling roadways so that workmen would not be required to travel long distances to their place of work in a stooping posture; and that brake straps on drums be provided with

asbestos or other fireproof lining. (The last two proposals are met by a bill amending the Coal Mines Regulation Act, introduced by the Minister of Mines on March 26).

The delegation asked for an amendment to the Workmen's Compensation Act to provide for an upward revision of the existing scale of compensation, and suggested that the various sick benefit funds be consolidated into one fund to which the Government and the employers would contribute 90 per cent and the miners 10 per cent, the Government's share being paid out of the revenues received from royalties on coal. An old age pension scheme which would provide a monthly pension of \$75 for every person over 60 years of age who had resided in the province for five years, was also proposed.

Representatives of the railwaymen's organizations in the Province also laid before the Government proposals for raising the scale of payments under the Workmen's Compensation Act.

**Manitoba  
G. W. V. A.  
convention**

The Manitoba Great  
War Veterans Associa-  
tion at their fifth annual  
convention, held at

Winnipeg in February, protested against the alleged disposition shown in certain quarters to return to the patronage system, against failure to apply the preference clause in civil service appointments, both federal and provincial, and requesting investigation of appointments in certain stated cases. Requests were made for the re-establishment of the system of vocational training by making provision in the civil service and in industrial works, etc., for students; for suspension of immigration from foreign countries until some proper scheme of selection is formed, and that preference be given to members of the Canadian Expeditionary Force who took discharge overseas, and who are desirous of returning; for adjustment of seniority rights of certain employees of Canadian National Railways, who served in the Great War; and for the issuing of

lumber permits to soldier settlers. A resolution was adopted urging the federal government to grant relief for unemployment on the same basis as last year, and a protest was voiced against the present method of the Department of Soldiers Civil Re-establishment in dealing with relief cases. The convention also expressed itself in favour of State Unemployment Insurance.

**British trade union contributions to political funds** A Bill to amend the Trade Union Act, 1913, has been introduced in the British Parliament to provide that when a resolution has been passed by a trade union in favour of contributing towards political funds those members who desire to contribute to the support of political objects shall from time to time indicate in writing their desire so to do. The Trade Union Act, 1913, as it stands provides for a secret ballot of members to decide whether political action should or should not be taken and for the exemption from contribution to the political fund of members who object to paying to the support of such fund.

**British unemployment inquiry proposed** The Industrial League and Council of Great Britain has made an interesting suggestion for an enquiry by industries into unemployment. It is pointed out that the extreme trade depression of the last two years may rightly be regarded as a product of the world war, but that, though the war aggravated, it did not create the unemployment problem; and that in effect alternation of activity and depression is the normal experience of almost all industries. The Industrial League and Council considers that the fundamental causes of this unemployment during normal times have not been sufficiently investigated and proposes that comprehensive enquiries into the problem should be conducted by Joint Industrial Councils and Reconstruction Commit-

tees. Such councils or committees exist at present in more than seventy industries, while even in industries such as mining or engineering which have not established Joint Industrial Councils there is usually machinery for the settlement of wage disputes which could be utilized for purposes of investigation.

The scope of the enquiry as outlined by the Industrial League and Council would include a careful survey of each industry's unemployment experience; an investigation of the causes; an estimate of the sufficiency, insufficiency or excess of capital in the industry; the character of the labour employed, whether regular or casual; the amount of present unemployment resulting from the surplus supply of labour in excess of normal requirements; the proportion of female and juvenile labour; the proportions of home and foreign demand; the percentages of wages to cost of production in comparison with 1913; and the output. The measures adopted in the different industries for preventing unemployment would also be investigated.

**Proposed health regulation in Australian factories** At a conference between commonwealth and state health representatives of Australia resolutions were adopted urging that there should be systematic medical examination of all workers; that all persons employed in factories or workshops should be examined medically before employment, until the person has completed his eighteenth year; that the medical records of the educational departments be made available to the authorized medical inspectors in the case of any child seeking employment in a factory or workshop; that factory medical inspectors be appointed; that the minimum legal working age should be fixed for factories and workshops at not under fourteen years for boys and fifteen years for girls; that each state should have in effective operation legislation controlling occupations dan-

gerous to the health of the employees; "that in view of the importance, as a phase of public health administration, of systematic medical supervision of the health of individual employees, and of the valuable information and results which have been obtained from the introduction by private employers of a medical service for their establishments, every employer, including governments, should be encouraged to provide efficient and regular medical service, which shall keep under review the health of the workers, and shall inquire as to any relation between variations in health and conditions of employment. Moreover, in order to obtain the greatest amount of public benefit from this measure, records of work done should be kept by a standardized method." It was estimated that between 18,000 and 19,000 children under the age of eighteen years are employed in factories in the commonwealth.

#### Children's work accidents in New York State

An analysis of compensable accident cases of children under 18 years of age, in the State of New York, during the year ending June 30, 1920, as prepared by the Division of Women in Industry of the Bureau of Research and Codes, shows 1,983 accidents of a serious enough nature to disable the boy or girl two weeks or more. Over 21 per cent of these children suffered some permanent disability from their accidents; the fatalities numbered 12, and in 214 cases total loss of the use of the part hurt, or dismemberment, was recorded; 173 cases suffered impairment of use, and 32 additional cases had permanent partial injuries. Altogether there were 345,672 industrial accidents reported to the Industrial Commission, of which 51,099 were compensable—47,643 to males and 3,456 to females. According to figures from the United States Census Bureau there were employed in gainful occupations coming under the State compensation law, 248,455 children under 18

years, of whom 135,277 were boys and 113,178 were girls. In addition to these there were employed in agriculture and domestic service, occupations which do not come under the compensation law, 22,091 boys and girls. Information with respect to 1,817 of the 1,983 serious accidents shows that only 8.5 per cent of the accidents occurred to children under 16 years. Nine children under 14 had accident cases, which were compensated on the ground that although they were too young to be employed legally, the fact of their employment gave them a right to compensation; eight of these were boys and one a thirteen-year-old girl. The youngest child to meet with an accident was a boy of eleven whose mitten caught while putting salt into an ice cream freezer which was operated by electricity with gears attached. Four-fifths of the compensated cases were accidents to boys. About 80 per cent of the accidents occurred in the manufacturing group, 313 out of 345 of the injured girls and 1,128 out of 1,472 of the injured boys being in this group. Thirty per cent of these accidents occurred in the manufacture of metal products, 99 accidents or 22.3 per cent resulting in amputations. The manufacture of wood products came second with 122 accidents, 23 of which resulted in amputations. Thirteen accidents occurred during the adjustment of machinery and twenty-four while adjusting and oiling machinery. In 23 cases the adjustment or oiling and cleaning was done while the machine was in motion. In all but two of these cases the children were between the ages of 16 and 18 years. Of the 1,817 accidents tabulated, 1,021 occurred in connection with machines, 3 on prime movers, 22 on power transmission apparatus, 923 from power working machines, 67 from hoisting apparatus, including elevators, and 6 from conveyors. Of the accidents due to power working machines, 392 were caused by metal working machines; 47.7 per cent occurred on presses. After accidents on machines, the next largest group, 280, occurred in the handling of objects and 37 injuries were the result of strain.

The handling of sharp or rough objects caused 135 accidents, 45 from handling sheet metal or sheet metal objects, 20 from handling glass, and 11 and 16 accidents respectively were from metal and wood slivers. The dropping of heavy objects caused 52 accidents, objects falling from piles, 7, and being caught between objects handled and another object, 26. Hand trucks, carts and wheelbarrows caused 11 accidents. Falls of persons caused 151 accidents, 74 being from elevations, 7 into excavations and pits, and 70 on the level. Ninety-four out of 112 accidents due to vehicles occurred in connection with automobile and other power vehicles. Fifty-two out of 68 accidents caused by hand tools were due to the glancing or slipping of the tool in the hands of the worker. Explosions and hot substances (such as hot water, molten metals or flames) caused 48 accidents; stepping on or striking against objects, 39, falling objects, 28; and poisonous and corrosive substances, 10 accidents.

As a result of the analysis, the question arose as to whether the State of New York ought not to penalize the employer for employing a child illegally by the adoption of the treble-compensation plan. It was recommended that placement agencies, employers and factory inspectors pay particular attention to the lifting and pushing of heavy objects by young workers. Other recommendations were to the effect that training should play a large part in the prevention of accidents caused by the handling of tools and that no child under eighteen years of age should be permitted to work on a cutting or stamping machine in the metal industry.

#### Settlement of trade disputes in Spain.

The Spanish government, by a Royal Decree of October 5, 1922, provided for the creation of joint committees for the settlement of disputes between capital and labour in agricultural, commercial, industrial, mining and transport undertakings. The committees will be set up either on the

initiative of the Minister of Labour (or of the provincial authorities or the local offices attached to the Ministry) or at the instance of the interested parties, and may be for an industry, for a group of enterprises, for a particular trade or occupation, or for a single enterprise employing over 500 workers. They will be of two kinds—permanent and *ad hoc*, and they may be either local or regional. Each committee will be composed of an equal number of employers and of workers, who must be actively engaged in the industry or occupation they represent. The chairman is to be non-partisan and chosen by agreement between the two sides, or, in default of agreement, nominated by the Minister of Labour. He has a casting vote only by the unanimous agreement of both sides; otherwise his function is purely conciliatory. The committee may either appoint technical experts, or request the Minister of Labour to nominate them, to assist in its deliberations. The Minister may, of his own accord, appoint technical experts to attend the meetings of the committee. In either case such experts do not vote.

The Permanent committees will be established by Royal Order in the more highly industrialized districts, and their members will be elected by secret ballot among the members of the employers' associations and the workers' trade unions concerned, or, where these do not exist, at separate meetings of employers and employed held for the purpose. These permanent committees are to be renewed every two years.

The Temporary (or *ad hoc*) committees will be set up as occasion arises to deal with particular disputes in the less industrialized districts. The members of the committee will be appointed by the local authorities after consultation with the representatives of employers and employed.

The committees may decide, by a unanimous vote, that the matter in dispute shall be submitted for arbitration to the local authority, to an official

organization or to the Minister of Labour.

#### Draft labour

code of

Roumania.

A draft labour code has been submitted by the Minister of Health, Labour and Social Wel-

fare of Roumania to the Committee on labour legislation attached to the Ministry. The code is based on the following principles: Guarantee of equal protection for the various factors in production; respect for liberty of work and determination of general labour conditions by means of collective agreements; labour conditions established by collective agreements to conform to the provisions of the labour code; equality of rights and obligations of employers and workers without distinction of sex, nationality or religion; equality of rights and obligation of men and women workers in industry and commerce, subject to special protective regulations for women workers; workers from 18 years of age and upwards to be considered as adults; wages to be not lower than the rates fixed by the competent authorities instituted by the labour code; compulsory jurisdiction of conciliation tribunals in labour disputes in private undertakings; prohibition of strikes in public undertakings and compulsory arbitration in case of dispute; hours of work not to exceed eight per day; weekly rest to be compulsory for all wage earners; guarantee of right of association and recognition of trade associations in conformity with the provisions of the labour code; representation of employers and workers on Chambers of Labour, the National Labour Council, the Superior Council of Social Insurance, and on all committees attached to these bodies; representation of the Chamber of Labour in Parliament; compulsory health and accident insurance for all workers in industry and commerce; extension of the

Social Insurance Act to include measures for the prevention of unemployment and the protection of the unemployed.

The code is divided into four parts under the following headings: (1) *Labour Agreements*: individual labour agreements, collective labour agreements, apprenticeship agreements, organization of labour, workers' co-partnership. (2) *Dispute*: right of association, strikes, lockouts, sabotage, representation of workers, compulsory conciliation, penalties, legal procedure and competent legal bodies. (3) *Protection of Labour*: regulation of work of women, young persons and children in conformity with the decisions adopted at the different sessions of the International Labour Conference, regulation of hours of employment, protection of homework, and of work in mines, health and safety measures in industrial undertakings. (4) *Organization of Labour*: regulations concerning trade associations and official organs, institution of a national labour council, organization of a system of private and public employment exchanges.

According to a press despatch this code has been the subject of criticism on the part of members of the Association of Employers in the metal industry of Roumania. The employers declared that the code would involve undue state intervention in industry, and that the provision of a minimum wage in the code could have no practical effect as wages depended on the prosperity of the undertaking and on supply and demand. The employers protested against the introduction of workers' control and the presence of workers delegates on boards of industrial companies as these would constitute an infringement of the authority and independence of the employer on which the success of the undertaking depended.

**Welfare plan**

**of Cosmos Cotton Company, Limited.**

An outline of a welfare plan of the Cosmos Cotton Company, Limited, of Yarmouth, Nova Scotia, is given in the

report of the factories inspector of the province for the year ended September 30, 1922. The report states that the company employs about 500 persons in its cotton duck mill. The mill is brightly painted on the inside, has good washing accommodations, sanitary drinking fountains, and clothes lockers. Their welfare work includes: (1) *Life insurance*—An employee after three months' service is insured for \$500. At the end of one year's service an additional \$100 is added and this is continued each year until the employee is insured for \$1,000. The insurance is only cancelled when the employee leaves the company. The company pays all premiums and the employee selects his or her own beneficiaries. (2) *Sickness and accident insurance*—Each employee is insured against sickness or accident that does not come under the Workmen's Compensation Board. The employee pays ten cents per week and the balance of slightly over 10 cents per week is paid by the company. An employee disabled by sickness or accident is entitled to \$10 per week and this amount is given for a period of twenty-six weeks if the disability lasts so long. Benefits are not paid unless the disability continues for more than one week, and a doctor's certificate is required. (3) *Medical service*—A full-time trained nurse is on duty every working day, and there is also a fully equipped first aid room and a rest room. A qualified physician attends regularly at 2.30 p.m. each day

and is on call when required for emergency cases. Consultation and treatment are free to the employees, and in case of sickness or injury at home the company on notification will send the doctor or nurse to the house free of charge. They do not, however, assume responsibility when another physician is called. (4) *Cafeteria*—Breakfast and luncheon are served in the factory by a private person at prices subject to the approval of the company manager, and employees are permitted to make purchases during working hours of candy, fruit, ice cream, etc. The company are planning to take over the entire operation of this cafeteria. (5) *Boarding-house*—A beautifully located house under the supervision of the mill management is provided for new employees who are strangers in the town. Girls only are admitted and board costs \$5 per week. The house accommodates about thirty girls. (6) *Co-operative store*—The company provides the building, which is located near the mill, and light and insurance free of cost. The store is managed by a committee of employees on a cash and carry basis. One clerk is permanently employed at the store, but during rush hours when the employees are going home, two or three of the clerks from the main office assist without remuneration. The prices are lower than those of the regular town stores, but to guard against trafficking or reselling no employee is allowed to spend more than one-half his weekly wages at the store. The store which was started during the past summer has proven very successful and the company plans to extend its activities by adding lines of clothing and footwear.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION.

### The Labour Situation, Strikes, Prices.

#### The Labour Situation.

THE volume of employment in Canada showed a further increase during February; considerable expansion in manufacturing was partly offset by continued curtailment of operations in the construction, transportation and trade industries. Employment continued on a higher level than during the corresponding month of last year and the situation was also more favourable than in February, 1921.

At the beginning of March the percentage of unemployment among members of trade unions stood at 6.4, as compared with 7.8 at the beginning of February, and with 10.6 at the beginning of March, 1922.

Reports from the offices of the Employment Service of Canada show that the expansion of business reported during January was maintained throughout February, vacancies reported and placements made being approximately the same while applications showed a slight increase.

#### EMPLOYERS' REPORTS

The trend of employment as indicated by reports made by employers of labour to the Dominion Bureau of Statistics was upward, although the gains were very much smaller than those reported at the close of January; these gains, however, had represented chiefly resumption of work after the holiday losses in December. Fluctuations in different industries produced this result. Manufacturing showed decided improvement but contractions in employment were again recorded in transportation, construction and trade. These declines, moreover, were supplemented by decreases in logging, indicating the commencement of season-

al slackness in bush operations, and by reductions in personnel in coal mining. All districts except the Prairie Provinces shared to some extent in the expansion recorded at the close of February, the gains in Ontario and British Columbia largely exceeding those reported elsewhere. In the former Province the bulk of the increase occurred in manufacturing, while in the latter, saw mills, logging, shipping and building construction registered substantial improvement. In the Maritime Provinces lumber mills, sugar refineries, coal mines and shipping showed the largest increases. No significant change occurred in Québec; expansions in manufacturing, on telephones, steam railways and in construction were largely offset by reductions in logging, shipping and trade. The greater part of the decline in the Prairie Provinces was due to curtailment of operations in the Alberta coal fields. Losses were also indicated in iron and steel, steam railway operations, construction and trade. Montreal, Toronto, Ottawa and Winnipeg recorded reductions in employment, while conditions in Hamilton and Vancouver were very much better than in January. The most important declines in Montreal were reported in shipping and long-shore work, in retail stores and in tobacco and glass manufacturing. The only large decreases in Toronto were registered in retail trade, while the manufacturing industries generally showed increased activity. In Ottawa, also, the largest contractions occurred in trade. Renewal of activity in the iron and steel industries accounted for the bulk of the increase in Hamilton. Retail shops in Winnipeg continued to release large numbers of sales persons, these losses counterbalancing moderate gains in employment in several other industries. The most decided expan-

sion in Vancouver was reported in building construction and in sawmilling. As already mentioned, the manufacturing industries manifested marked improvement, especially in the iron and steel, textile and lumber divisions. Although the losses in construction and trade were heavy, they were the smallest that have been reported in any month since September. The commencement of seasonal inactivity in logging caused considerable reductions and coal mining also suffered severe losses in personnel, almost wholly in Alberta. Retail trade continued to show marked curtailment in staffs, but wholesalers were very slightly busier. The level of employment in practically all these groups was higher than in February, 1922, and in many cases it was also higher than in the same month of 1921.

An article elsewhere in this issue gives in some detail the employment situation during February as reported by employers.

**TRADE UNION REPORTS**      The volume of unemployment, as indicated by returns received from 1,435 labour organizations with an aggregate membership of 149,969 persons, was slightly less at the end of February than that reported at the close of the preceding month, the percentage of idleness standing at 6.4 as compared with 7.8 on January 31, 1923, and with 10.6 at the end of February, 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.) New Brunswick, Manitoba, Saskatchewan, Alber-

ta and British Columbia unions registered more employment than in the previous month while in the other provinces less activity was indicated. In comparison with the returns received for February of last year, more favourable conditions were reported in every district. In the manufacturing industries a slightly smaller percentage of idleness was shown than in January, owing to greater employment for iron, steel and textile workers. Within the iron and steel group, moulders, patternmakers and sheet metal workers were busier and in the textile trades employment for bookbinders was on a much higher level. More employment was also afforded furniture, garment, jewelry, brewery and glass workers. Cigar and tobacco workers, on the other hand, were considerably slacker. The mining group, as a whole, reported a smaller percentage of idleness than in January. Coal miners in Nova Scotia were not so busy and a small percentage of unemployment was reported by British Columbia miners. In Alberta, however, the situation was more favourable. Quarry workers in Nova Scotia continued to be fully engaged. Unions in the building trades reported slightly more activity than in January, the increase in Quebec being particularly marked. Carpenters and joiners, granite and stonecutters, painters, decorators and paperhangers and hod carriers and building labourers were better employed than in the previous month but employment for steam shovel and dredgemen, bridge and structural iron workers, bricklayers, masons and plasterers, electrical workers, plumbers and steamfitters and tile layers, lathers and roofers was in lesser volume. In comparison with the returns for February, 1922, all tradesmen except steam shovel and dredgemen, electrical workers and tile layers, lathers and roofers were busier. In the transportation industries the percentage of idleness was practically the same as in the preceding month, the improvement registered in the steam railway division almost counterbal-

ancing the decreases in the shipping and stevedoring division and among street railway workers. Lumber workers and loggers reported a larger percentage of their members out of work than in the previous month. Civic employees were more fully engaged, as were also fishermen, hotel and restaurant employees, barbers and stationary engineers and firemen. Theatre and stage employees, on the other hand, were slacker.

#### EMPLOYMENT OFFICE REPORTS

During the month of February, 1923, the offices of the Employment Service made 28,777 references to positions and effected the total of 27,150 placements. Of these the placements in regular employment numbered 12,013 (of which 9,841 were of men and 2,772 of women) and 15,497 in casual work. The offices received 36,866 applications for employment, 29,243 of which were from men and 7,623 from women workers. Employers notified the Service of 30,939 vacancies, of which 23,531 were for men and 7,408 for women. Compared with the previous month little change is shown in the volume of business, but a comparison with February, 1922, shows a marked increase.

A report in detail of the work of the offices of the Employment Service during the month is given elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during February was considerably higher than in the preceding month and also than in February 1922. The estimated value of the permits issued during the month was \$4,744,478 as compared with \$3,705,256 in January 1923 and with \$4,201,955 in February, 1922.

According to the *Canadian Building Review*, issued by MacLean Building Reports, Ltd., the value of contracts awarded during February amounted to \$13,311,800 as compared with \$9,840,800 in January and with \$10,718,300 in February of last year. There was, therefore, an increase of 35.3 per cent in the former and 24.2 per cent in the latter comparison. Of the total for the month under review, \$253,600, or 1.9 per cent, was to be spent in the Maritime Provinces; \$11,009,100, or 82.7 per cent, in Quebec and Ontario and \$2,049,100, or 15.4 per cent, in the Western Provinces. A further analysis of the total for the month shows that \$2,854,000 was to be spent on residences, \$6,363,800 on business establishments, \$2,997,500 on industrial buildings and \$1,096,500 on engineering contracts.

#### PRODUCTION REPORTS

The Dominion Bureau of Statistics reports that the production of pig iron during February showed a further increase of 3,511 tons or 8.6 per cent over the previous month, the tonnage being 44,250 and 40,739 tons respectively. The cumulative production for January and February of this year was also greater than the comparative figures of a year ago by 19,233 tons or 29.2 per cent. According to grades the February output included 25,421 tons basic iron, 13,129 tons of foundry iron, and 5,700 tons of malleable iron. During the month an additional furnace at Sault Ste. Marie was put in operation and of the seven units in blast at the end of the month three were at Sydney, two at Hamilton and two at Sault Ste. Marie. The production of ferro-alloys declined from 2,093 tons in January to 1,977 tons in February.

Steel production in February showed a decline of 1,424 tons as compared with the previous month, the tonnage for February being 46,537 and for January 47,961. The February production exceeded the production of the

corresponding month of 1922 by 4,149 long tons or 9.8 per cent.

A report from the Department's correspondent at Cobalt states that five cars containing approximately 347,890 pounds of silver ore were shipped during February from the Cobalt camp, as compared with four cars containing 323,149 pounds in the previous month. The Nipissing mine shipped 352 bars containing 404,115.67 ounces of silver, and the Mining Corporation of Canada shipped 211 bars containing 211,253.79 ounces, making a total of 563 bars containing 615,369.43 ounces of silver for the month of February, as compared with 460 bars containing 497,269.09 ounces in the previous month.

A report from the British Columbia Forestry Branch shows that 122,815,059 feet B.M. of timber was scaled in that province during February. The total includes Douglas fir, 53,352,369 feet; red cedar, 30,593,300 feet; hemlock, 11,849,633 feet; spruce, 6,357,563 feet; jack pine, 7,083,460 feet; yellow pine, 5,269,109 feet; white pine, 1,823,822 feet; balsam, 2,581,508 feet; larch, 3,839,550 feet; cotton wood, 35,274 feet; and other species, 29,471 feet.

The gross earnings of the Canadian National Railways (including electric lines) according to a preliminary statement issued, amounted to \$7,558,241 in February as compared with \$7,733,660 in February, 1922. The gross earnings of the Canadian Pacific Railway for February were given in a preliminary statement as \$11,159,865 in comparison with \$11,303,693 for February of last year.

#### Strikes.

The time loss due to industrial disputes reported to the Department during March was less than during February and also less than during March, 1922. There were in existence at some time or other during the month 15 disputes, involving 1,431 employers and a time loss of 33,991 working days, as compared with 19 disputes in February,

involving 5,087 employees and a time loss of 51,675 working days. In March, 1922, there were recorded 20 disputes involving 2,569 employees, with an estimated time loss of 62,737 working days. At the beginning of March there were on record 12 disputes, involving 1,226 employees. Three new disputes commenced during March, involving 205 employees, resulting in a time loss estimated at 2,115 working days. Two of these strikes terminated during the month. At the end of the month, therefore, there were 13 disputes involving 1,303 employees.

#### Prices.

The movement in prices during the month was again slightly upward; both the index number of wholesale prices and the family budget in terms of retail prices showing small advances over the levels in February.

In wholesale prices the index number advanced to 225.7 in March as compared with 224.3 in February; 225.6 in March, 1922; 263.1 in March, 1921; 356.6 in May, 1920 (the peak); and 137.0 in March, 1914. With the exception of dairy produce and fish which advanced, farm products and miscellaneous foods were lower. The advance in dairy products in spite of a substantial seasonal decline in eggs was due entirely to a sharp increase in the price of butter. All other groups except house furnishings and chemicals were higher, the most important advances occurring in textiles, metals, and building materials. Compared with a year ago, grains and fodder, animals and meats, fish, fruits and vegetables, house furnishings, chemicals, and sundries were lower. All other groups were higher.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.79 at the beginning of March as compared with \$10.53 for February; \$10.54 for March, 1922; \$13.23 for March, 1921;

\$16.92 for June, 1920 (the peak); and \$7.68 for March, 1914.

Including the cost of fuel and rent with that of foods, the figures averaged \$21.47 at the beginning of March as compared with \$21.23 for February; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the

highest point reached); and \$14.35 for March, 1914. In foods the only important decline was in eggs, though bacon and evaporated apples were also slightly lower. Nearly all the other items advanced, the most important being in butter, sugar, cheese, meats, and bread. Fuel and rent were practically unchanged.

CANADIAN IMPORTS AND EXPORTS DURING FEBRUARY, 1923.

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of February, 1922 and 1923, and for the eleven months ending in February of these years, and the exports,

domestic and foreign, of similar classes of goods for the same periods.

The following table shows the imports, free and dutiable, and the exports, domestic and foreign, of the various classes of products, for the month of February, 1923:

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
	\$	\$	\$	\$
Agricultural and vegetable products, mainly foods	1,477,498	5,563,986	17,073,102	42,014
Agricultural and vegetable products, other than foods	2,492,038	2,192,195	1,744,808	106,300
Animals and animal products.....	1,411,198	2,110,505	8,473,326	124,028
Fibres, textiles and textile products.....	6,019,804	10,500,247	422,609	223,635
Wood, wood products and paper.....	1,009,461	1,601,211	16,869,580	28,002
Iron and its products.....	1,013,202	9,925,462	5,378,239	209,073
Non-ferrous metals and their products.....	823,757	2,055,077	3,429,250	55,382
Non-metallic minerals and products.....	6,591,179	6,024,800	2,089,057	69,516
Chemicals and allied products.....	705,647	999,954	1,258,861	5,909
Miscellaneous commodities.....	941,507	1,869,468	917,329	135,292
Totals .....	22,485,291	42,822,405	57,656,161	990,151

In February, 1923, the duty collected amounted to \$10,188,481 as compared with \$9,846,731 in February, 1922.

The following comparative table shows the values of merchandise entered for

consumption and the merchandise, domestic and foreign, exported in the months of February, 1922 and 1923, and in the eleven month periods ending February of these years respectively:

	Month of February		Eleven months ending February	
	1922	1923	1922	1923
	\$	\$	\$	\$
Merchandise entered for consumption.....	54,294,255	65,307,696	668,425,606	710,583,616
Merchandise, domestic, exported.....	46,046,449	57,056,161	680,701,367	854,893,844
Total .....	100,340,704	122,363,857	1,349,126,973	1,565,477,460
Merchandise, foreign, exported.....	958,024	990,151	12,378,148	12,615,318
Grand total, Canadian trade.....	101,298,728	123,354,008	1,361,505,121	1,578,092,778

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF MARCH, 1923.

**N**O reports of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, were received by the Department in March. Three applications were received for the establishment of Boards and three Boards were established during the month.

### Applications received.

During March applications for the establishment of Boards were received as follows:

(1) From employees of the Brantford Municipal Railway Commission being street railway workers, members of Local Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America. As this industry did not come directly within the scope of the Act, a Board could be constituted only with the joint consent of both parties to the dispute under Section 63 of the Act. The officers of the Commission in its communications to the Department explained that they had suggested to the employees that the questions involved, namely, wages, should be taken up for consideration in June next and objected therefore to the establishment of a Board. In these circumstances no further action looking to the establishment of a Board of Conciliation could be taken.

(2) From certain employees of the corporation of Prince Rupert, B.C., being members of Local No. 20, Civic Employees Union. As this dispute did not fall directly within the scope of the Act, the consent of both parties was necessary before a Board could be established. The Mayor of Prince Rupert having given his consent, a Board was established and members appointed as follows: His Honour Judge F. Mc.B. Young, Prince Rupert, chairman, appointed by the Minister on the joint

recommendation of the other two members of the Board, Messrs. W. E. Fisher and T. Ross Mackay, both of Prince Rupert, nominees of the Mayor and employees respectively.

(3) From certain employees of the Winnipeg Electric Railway Company, being members of the Gas Workers' Union of Winnipeg. A Board was established and Mr. R. S. Ward, Winnipeg, was appointed on the recommendation of the employees. The two other members of the Board were not appointed at the end of the month.

In the case of a dispute between the Canadian National Railways, Western Lines, and their dining and sleeping car employees, members of the Canadian Brotherhood of Railroad Employees, an application for a Board of Conciliation had been received some months ago and having been taken up by the Department with the employer direct negotiations were reopened. During the month of March a communication from the employees represented that the negotiations had been ineffective in terminating the dispute, and a Board of Conciliation was accordingly established. Messrs. C. E. Dafoe, Winnipeg, and David Campbell, Regina, nominees of the Railways and employees respectively, were appointed members of the Board.

### C. P. R. Clerical and Station Employees.

During March a settlement was reached between the Canadian Pacific Railway and its clerical and station employees on the western lines. Similar settlements had been reached in previous months between other railways and these and the other classes of employees who had been involved earlier in proceedings before Boards of Conciliation and Investigation. The nature of the settlements is set forth in another article in this issue.

## PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT NO. 1.

**S**EVEN new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. (Earlier decisions of the Board appeared in the *LABOUR GAZETTE* for January, 1923, on pages 49 to 51, and in previous issues). Case No. 149 has reference to the dismissal of a locomotive foreman who had formerly been hostler of the Canadian National Railways, Western lines. Case No. 150 has reference to the claim of a yard foreman and crew of the Canadian Pacific Railway, Western lines, for road service when hauling cars between two points. Case No. 151 has reference to the dismissal of a yardman of the Canadian Pacific Railway, Western lines. Cases Nos. 152 and 153 relate to the dismissal of conductors of the Canadian Pacific Railway, Western lines. Case No. 154 has reference to a controversy over the number of hours per day road crews should be required to work in Penticton yard. Case No. 155 relates to the claim of a yardman of the Canadian Pacific Railway, Western lines, for payment for time out of service.

**Case No. 149—The Canadian National Railways, Western Lines, and the Brotherhood of Locomotive Firemen and Engine-men.**

A hostler of the Canadian National Railways, western lines, was appointed acting foreman on August 1, 1914, and foreman on January 1, 1915. In 1920 he was dismissed as foreman for alleged violation of Rule "G". The employees claimed that while they had no jurisdiction in so far as the position of locomotive foreman is concerned, yet they were of the opinion that an investigation should be held and the charges proven before this man could be deprived of his rights as a hostler, and that when removed from the position as foreman he should have been allowed to return to

his former position as hostler unless a direct charge had been made by the Company, an investigation held and charge proven.

The Company refused to allow the Firemen's Committee to be a party to an investigation in this matter on the ground that if such stand was not taken any officer who got into trouble could get some organization to take up his case. The Company also refused to join the firemen in submitting a joint case to the Board of Adjustment on the ground that the latter had no right to appear for an officer.

In its general statement the Board expressed the opinion that as this was a case whereby an officer of the Railways was dismissed and as such positions were not covered by any schedule agreement it was outside of its jurisdiction to pass on the merits of the discipline applied. The claim of the employees was, therefore, dismissed.

**Case No. 150—The Canadian Pacific Railway, Western Lines, and the Brotherhood of Railroad Trainmen.**

A yard foreman and crew were engaged on various dates in handling cars between two points on the western lines of the Canadian Pacific Railway, a distance of 5.4 miles. A difference of opinion arose between the officers of the Company and members of the Brotherhood of Railroad Trainmen as to the jurisdiction of the Company in refusing to pay the same compensation to this yard foreman and crew as would be paid to road crews for this work. The Company contended that, by transferring loads from Hardisty to Rosyth with the switch crew, it was merely carrying on a practice that had been established at that terminal in 1910, and had been carried on from time to time since as traffic conditions required; that

it was in no way different from the practice in effect at Minnedosa, and though the special agreement that was in the schedule of 1911 was not in the present one, by mutual agreement the past practice was carried on. Although Hardisty was not particularly mentioned, no change had been made in the handling of this traffic, and the Company claimed that as the basis was an eminently fair one, there seemed to be no reason why it should not be continued.

The employees contended that the yard foreman and crew should be paid 100 miles for the trips from Hardisty to Rosyth and return to Hardisty, which was what a road crew would be entitled to under the same conditions. Article 8, Clause (a), of the Yard Schedule prohibits yard crews being used outside of yard terminals except for switching or transfer service, and hauling cars from Hardisty to Rosyth is road service and belongs to road crews. Article 8, Clause (b), provides when yardmen are used in an emergency in road service road rates and conditions will apply.

By decision of the Board the contention of the employees was sustained, but with the proviso that the decision should not be construed as affecting in any way established practices at other points.

**Case No. 151—The Canadian Pacific Railway, Western Lines, and the Brotherhood of Railroad Trainmen.**

A controversy arose between the Canadian Pacific Railway and the Brotherhood of Railroad Trainmen over the dismissal of a yardman. According to the joint statement of facts many packages of freight had been pilfered in the yard at Calgary, and a quantity of goods similar to what had been stolen was found in the possession of their yardman. As he could give no satisfactory explanation as to how he came into possession of these goods, he was dismissed from the service. The company contended that the evidence as to this man's implication in the thefts as indicated by the stolen property found in his pos-

session and his inability to give any satisfactory explanation as to his being in possession of it fully justified his dismissal.

The employees contended that this man should not have been dismissed as no evidence was produced either at his investigation or at his trial in the police court to show that any of the articles found in his possession were stolen by him or were articles stolen from the Canadian Pacific Railway cars.

By decision of the Board the claim of the employees was denied.

**Case No. 152—The Canadian Pacific Railway, Western Lines, and the Order of Railway Conductors.**

A conductor of the Canadian Pacific Railway, western lines, was dismissed for the following reasons: "For violation of Rules 87, 99 and 106, resulting in being on the main line of the Taber Sub-division, when conductor on train 3rd 92, on the time of train 511, without orders or proper flag protection."

The employees admitted that train 3rd 92 was on the main line on the time of train 511 without authority, but claimed it was through no fault of the conductor, as his train was too heavy to back into the siding where he should have waited, and consequently he had to let the train go on. They also admitted that proper protection was not arranged as per Rule 99, but claimed that while the rule was not literally carried out, there was no conceivable risk on that account as it was a clear day, and there was a straight track at Coaldale where he stopped to take the train into a siding. The employees contended that the discipline given the conductor was extreme and that it should be changed from dismissal to suspension to date of his return to service.

The Board declared that it admitted that the conductor's train was, with his knowledge, on the time of and running against the rights of a superior train, without protection, and in the

interests of safety it could not see its way clear to condone such a violation of operating rules.

The claim of the employees was therefore denied.

**Case No. 153—Canadian Pacific Railway, Western Lines, and the Order of Railway Conductors.**

A conductor of the Canadian Pacific Railway was dismissed on the charge of violation of Rule 99, resulting in a collision.

The company stated that there was very heavy traffic at the time on the Kenora division where the accident took place, and the men had been repeatedly cautioned in connection with prompt and efficient carrying out of the rules, especially Rule 99. This rule gives definite instructions as to the protection of a train when stopped or delayed on the main track, when it may be overtaken by another train. The Company contended that no attempt was made on the part of the conductor to protect his train in accordance with the rule excepting to throw off a yellow fusee.

The employees stated that this conductor's train was flagged by the flagman of a train that was stalled ahead. The engineer stopped, picked up the flagman and proceeded. The conductor lit a yellow fusee and placed it on the track behind his train when it was starting. The engineer stopped the train again a little farther on, and the conductor sent his flagman back, but was only able to get about sixty car lengths behind his train when another train passing the fusee and the flagman, collided with the rear end of the standing train which was hidden from view by a curve and tunnel.

The Board declared in its statement: "The evidence clearly indicated that a rear end collision occurred through inadequate flag protection. There were, however, circumstances over which McK— did not have full control which contributed to this, and it was evident that he was not entirely neglectful.

The decision of the Board was as follows:

The Board recommends to the Company the consideration of the discipline applied, having in mind that the case might be adequately taken care of if McK— were now reinstated, the time out of service to be recorded as discipline against him.

**Case No. 154—The Kettle Valley Railway Company and the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen.**

A controversy arose between the Kettle Valley Railway Company and its locomotive engineers and firemen over the number of hours per day road crews would be required to work in Penticton yard. From the joint statement it appears there is not enough business at that yard to warrant the establishment of an assigned yard crew, and the yard work is pooled with road work. The disagreement was over the number of hours the crews in this service would be required to work before they might tie up. The Company contended that the men should be required to work twelve hours, while the employees claimed that the men were entitled to tie up at the end of eight hours, or immediately on arrival at South Penticton, if eight hours had expired while on the road.

The decision of the Board was as follows:

Under the conditions stated, and with the existing arrangement in effect, crews would not be justified in tying up until after twelve hours' service.

**Case No. 155—The Canadian Pacific Railway, Western Lines, and the Brotherhood of Railroad Trainmen.**

A yardman of the Canadian Pacific Railway was dismissed early in 1920 for deserting his post as night foreman at Field yard. His case was appealed and he was finally reinstated under an agreement reached by the Assistant General Superintendent of the British Columbia District and the General Chairman of the Brotherhood of Railroad Trainmen. The Company claimed

that the agreement provided for his reinstatement without any demerit marks against his record, the time he was off being allowed to stand as punishment in the case. This employee appealed to the Board of his Brotherhood for pay while out of service. The appeal was sustained by the Board. It was claimed on his behalf that he had never

been promoted to foreman but that he was dismissed for not taking this position.

The decision of the Board was as follows:

An agreement having been reached between the recognized representatives of the employees and of the Company, that agreement should stand.

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1923.

THE following table shows the number of strikes and lockouts in existence in Canada at some time or other during March, 1923, reported to the Department, together with the number of employees involved and the time loss in working days, as compared with the previous month and with March, 1922.

	Disputes	Number of employees involved	Time loss in working days
March, 1923..	15	1,431	33,991
February, 1923..	19	5,087	51,675
March, 1922..	20	2,569	62,737

The record of the department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together.

A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one working day. Disputes of only one day's duration or less and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

During March the group showing the greatest time loss, 29,744 working days, was the printing and publishing group.

This time loss was due to ten strikes of compositors and pressmen, most of which began in May, June and July, 1921. Three new strikes were reported during March, moulders' labourers at Guelph, switchmen at Hamilton and taxi-cab drivers at Montreal.

In addition to the strikes reported as beginning during the month, information was also received in the Department relating to a strike not recorded in the previous issues of the LABOUR GAZETTE. This was a strike of coal miners at Drumheller which commenced on January 29, and terminated on February 3. Information was also received concerning disputes in metal manufacturing shops at Trenton, N.S., and London, Ont., in which there were suspensions of work during disputes as to wage rates. In each case an agreement was reached but the information received indicated that the suspensions of work were not due to the disputes.

Twelve disputes involving 1,226 work-people were carried over from February. Two of those commencing during March terminated during the month. At the end of March, therefore, there were on record 13 disputes: coal miners, Joggins, N.S., (which was later settled about April 3); photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors, Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ot-

## STRIKES AND LOCKOUTS DURING MARCH, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to March, 1923.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING—</b>			
Coal miners, Joggins, N.S. ....	70	1,820	Commenced January 20, against a reduction in wages. Unterminated.
<b>MANUFACTURING—</b>			
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que...	30	780	Commenced May 2, 1921, for shorter hours. Unterminated.
Printing compositors, Hamilton, Ont.	35	910	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Unterminated.
Printing compositors, Montreal, Que.	21	546	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Unterminated.
Printing compositors, Montreal, Que.	205	5,330	Commenced July 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Montreal, Que.	25	650	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Unterminated.
Printing compositors, Toronto, Ont.	501	13,026	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors, Winnipeg, Man.	190	4,040	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Unterminated.
Printing compositors and pressmen, Halifax, N.S.	45	1,170	Commenced May 2, 1921, for shorter hours with same weekly wages. Unterminated.
Printing compositors and pressmen, Ottawa, Ont.	80	2,080	Commenced June 1, 1921, for increased wages and 44-hour week. Unterminated.
Printing compositors and pressmen, Vancouver, B.C.	12	312	Commenced May 2, 1921, for increased wages and 44-hour week. Unterminated.
<b>TRANSPORTATION—</b>			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	12	312	Commenced July 2, 1922, for recognition of the union. Unterminated.
<b>(b) Strikes and lockouts commencing during March, 1923.</b>			
<b>MANUFACTURING—</b>			
<i>Iron, Steel and Products:</i>			
Moulders' labourers, Guelph, Ont..	100	400	Commenced March 14, for increased wages. Compromise arrived at March 19.
Steel yard switchmen, Hamilton, Ont.	28	252	Commenced March 1, for increased wages. Workers replaced by March 10.
<b>TRANSPORTATION—</b>			
<i>Storage and Local Transportation:</i>			
Taxicab drivers, Montreal, Que....	77	1,463	Commenced March 8, against dismissal of employee. Unterminated.

tawa; printing compositors and pressmen, Vancouver; motormen and conductors, Niagara Falls, and taxi-cab drivers at Montreal. In the case of the two strikes of coal miners at Edmonton and Cardiff information received indicated that employment conditions were no longer affected but that the strikes had not been called off.

#### Disputes by Industries.

The following is a review of disputes by those groups of industries in which strikes and lockouts occurred during the month in the order in which they appear in the statistical table.

#### MINING, NON-FERROUS SMELTING AND QUARRYING.

The strike of 70 coal miners at Joggins which began on January 20, against a reduction in wages, remained unternminated at the end of March, but was reported settled in the first week of April.

#### MANUFACTURING.

*Printing and publishing.* — The ten strikes in the printing and publishing

group still remained unsettled. Owing to some of those on strike securing employment elsewhere the number of employees on strike was reduced to 1,144.

*Iron, steel and products.*—Two strikes, involving 128 workpeople and resulting in a time loss of 652 working days, were reported in this group. At Guelph, on March 14, a strike of moulders' labourers took place for an increase in wages and was settled by a compromise. On March 1, a strike of 28 switchmen took place at Hamilton. They demanded an increase in wages which was refused, and the employing company was reported to have replaced the workers by March 10.

#### TRANSPORTATION.

*Street and electric railways.* — The strike of motormen and conductors at Niagara Falls, Ont., which has been in existence since July, 1922, remained unsettled at the end of March.

*Storage and local transportation.*—A strike of 77 taxi-cab drivers occurred in Montreal on March 8, over the dismissal of an employee. This strike remained unsettled at the end of the month.

---

### STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING FEBRUARY, 1923.

**T**HE British *Ministry of Labour Gazette* for March contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland, during February, 1923, based upon returns from employers and workpeople.

**NUMBER, MAGNITUDE AND DURATION.** —The number of trade disputes involving a stoppage of work, reported to the Department as beginning in February, in Great Britain and Northern Ireland, was 41, as compared with 54 in the previous month and 62 in February, 1922. In these new disputes 23,000 workpeople were directly in-

involved and 6,000 indirectly involved (i.e., thrown out of work at the establishments where disputes occurred, though not themselves parties to the disputes). In addition, 11,000 workpeople were involved, either directly or indirectly, in 36 disputes which began before February and were still in progress at the beginning of that month. The number of new and old disputes was thus 77, involving 40,000 workpeople, and resulting in a loss during February of 337,000 working days.

The principal new dispute was one involving 6,147 coal miners, etc., in the South Shields district, who were idle

from February 12 to 23 in sympathy with workpeople at a neighbouring colliery where a dispute was in progress from January 25 to February 23 on a question respecting the payment of the minimum wage. On work being resumed, the question in dispute was settled by an agreement confirming the practice already in force, with certain reservations. A number of stoppages of work occurred in February at collieries in South Wales and Monmouthshire to compel non-members of the South Wales Miners' Federation to join the Federation. In most cases the object was attained after a brief stoppage of work, but one dispute involving 2,300 workpeople was still in progress at the time of going to press. The dispute which began on January 20, involving about 4,000 workpeople in the bookbinding industry in the London district, terminated on February 13, when the matter in dispute was submitted to arbitration. The arbitrators decided that the bookbinding employers (whose refusal to adopt the rates of wages for warehousemen, packers, porters, etc., agreed upon by the London Master Printers' Association occasioned the dispute) were parties to the agreement in question.

CAUSES.—Of the 41 disputes beginning in February, 8, directly involving 4,000 workpeople, arose out of proposed reductions in wages; 11, directly involving 1,000 workpeople, on other wages questions; 14, directly involving 9,000 workpeople, on questions of unionism and non-unionism; one, directly involving 6,000 workpeople, in sympathy with workpeople involved in another dispute; and 7, directly involving 3,000 workpeople, from other causes (in-

cluding one dispute as to the landing of fish from German trawlers).

RESULTS.—Settlements were effected during February in the case of 29 new disputes, directly involving 17,000 workpeople, and 15 old disputes, directly involving 9,000 workpeople. Of these new and old disputes, 19, directly involving 12,000 workpeople, were settled in favour of the workpeople; 8, directly involving 2,000 workpeople, in favour of the employers; and 17, directly involving 12,000 workpeople were compromised. In the case of 7 disputes, directly involving 3,000 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in February in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all the disputes in progress:

Groups of industries	Number of disputes in progress in February			Number of workpeople involved in disputes in progress in February.	Aggregate duration in working days of all disputes in progress in February.
	Started before February 1.	Started in February.	Total		
Mining and quarrying.....	5	19	24	23,000	199,000
Metal, engineering and shipbuilding	14	5	19	1,000	13,000
Textile and clothing.....	1	7	8	6,000	28,000
Printing, paper, etc., trades.....	3	.....	3	5,000	64,000
Other trades.....	13	10	23	5,000	33,000
Total, Feb., 1923..	36	41	77	40,000	337,000
Total, Jan., 1923..	17	54	71	19,000	117,000
Total, Feb., 1922..	44	62	106	30,000	269,000

## DRAFT CONVENTIONS AND RECOMMENDATIONS OF THE THIRD AND FOURTH SESSIONS OF THE INTERNATIONAL LABOUR CONFERENCE BROUGHT BEFORE THE PARLIAMENT OF CANADA.

**T**HE Draft Conventions and Recommendations of the third session of the International Labour Conference (League of Nations) which was held in Geneva, Switzerland, from October 25 to November 19, 1921, were brought before the Dominion Parliament by the Minister of Labour on March 23, 1923. The text of these Draft Conventions and Recommendations appeared in the LABOUR GAZETTE of January, 1922.

On March 28, 1923, the Minister of Labour brought before Parliament the Recommendation which was adopted at the fourth session of the International Labour Conference, held in Geneva, Switzerland, October 18 to November 3, 1922. The text of this recommendation appeared in the LABOUR GAZETTE of December, 1922.

In both cases the documents referred to were laid on the table of the House of Commons. The statement made by the Minister of Labour in connection with the Draft Conventions and Recommendations of the third session was as follows:—

I beg to lay on the Table of the House the authentic texts of the Draft Conventions and Recommendations adopted by the International Labour Conference (League of Nations) at its third session held in Geneva, Switzerland, October 25-November 19, 1921.

Under Paragraph 5 of Article 405 of the Treaties of Peace:

Each of the Members undertakes that it will, within the period of one year at most from the closing of the session of the Conference, or if it is impossible owing to exceptional circumstances to do so within the period of one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the session of the Conference bring the recommendation or draft convention before the authority or authorities within whose competence the matter lies, for the enactment of legislation or other action.

When the authentic texts of the Draft Conventions and Recommendations of the 1921 Conference were received from the Secretary General of the League of Nations they were referred to the Department of Justice for consideration of the question whether the proposals involved were to be regarded as within Dominion or Provincial legislative competence. The report of the Minister of Justice on this subject was approved by Order-in-Council on June 27, 1922, and a copy of the Order-in-Council is attached to the texts of the Draft Conventions and Recommendations for the information of the House. It will be observed that most of the proposals were found to be within provincial jurisdiction. Copies of the Order-in-Council of June 27, 1922, and of the authentic texts of the Draft Conventions and Recommendations were transmitted subsequently to the different Lieutenant-Governors for the consideration of their respective Governments with a view to such legislative or other action in line with the proposals involved as each Provincial Government might be advised to take. The obligations of the Government of Canada under the Peace Treaties have thus been fulfilled in respect of the individual measures of the 1921 Conference which were found to be within Provincial sphere.

With respect to those Draft Conventions and Recommendations which were found to be within Federal legislative competence, the authentic texts are being brought before Parliament in conformity with the requirements of Paragraph 5 of Article 405 of the Treaties of Peace and are being laid on the Table of the House. The questions involved in these latter Draft Conventions and Recommendations are also receiving the attention of the Government. The Dominion Government has proposed to the several Provincial Governments that a Dominion-Provincial Conference should be held for the purpose of considering certain aspects of matters arising out of the relations between Canada and the International Labour Organization. Most of the Provinces have already expressed their assent in this suggestion and it is expected that the meeting will be held in the early part of next summer.

The statement made by the Minister of Labour in connection with the Re-

commendation of the fourth session of the International Labour Conference was as follows:—

I beg to lay on the table of the House the authentic text of a recommendation concerning communication to the International Labour Office of Statistical and other Information regarding Emigration, Immigration and the Repatriation and Transit of Emigrants which was adopted by the International Labour Conference at its fourth session in Geneva, October 18 to November 3, 1922.

No draft conventions were adopted at this session of the Conference and the only recommendation was the one to which I have just referred.

I may add with reference to the recent enquiry of the Rt. Hon. Leader of the Opposition (Mr. Meighen) on this subject that the authentic text of this recommendation reached the Labour Department on March 26. The same is being brought before Parliament in conformity with the requirements of Paragraph 5 of Article 405 of the Treaty of Versailles and the analogous provisions of the other Treaties of Peace.

### ANNUAL CONVENTION OF NEW BRUNSWICK FEDERATION OF LABOUR.

THE tenth annual convention of the New Brunswick Federation of Labour was held at Fredericton on March 13 to 15. The president Mr. J. E. Tighe occupied the chair. There were 37 delegates present.

The financial statement submitted by the secretary-treasurer showed receipts amounting to \$630.84 and expenditures of \$509.44 leaving a balance of \$121.40.

The executive reported that on March 8, 1922, a committee had submitted a legislative programme to the provincial government, and that as a result the government had promised to appoint a commission on the Mothers' Allowance and Minimum Wage Acts, to pass regulations under the Public Health Act providing for the examination and licensing of master and journeymen plumbers and to call a conference of mine owners and miners to draft regulations governing the mining industry in the province. The executive reported that these promises had not yet been carried out and recommended that the convention take some definite action on the matter.

It was reported by the executive that the employers had submitted to the Government amendments to the Workmen's Compensation Act which they claimed if adopted would take away

many of its beneficial features. The executive had suggested to the Government that a conference be held between representatives of the Government, employers and labour to discuss these amendments.

Resolutions were passed dealing with the following subjects among others: Expressing confidence in the personnel and administration of the Workmen's Compensation Board; endorsing the action of Local No. 825, International Longshoremen's Association, Miramichi, in their efforts to secure a shorter work day; urging the Government to develop the Grand Falls water power as soon as possible and to take up with the Dominion Government the prohibition of the export of pulpwood; requesting the Dominion Government to amend the Canada Shipping Act so as to give gear inspectors further power in cases of unsafe gear; and requesting the Government to provide free school books, and to make all text books and equipment a part of the regular equipment of all grammar and high schools.

Another resolution provided for the appointment of members of a joint committee in conjunction with the Provincial Legislative Board of the running trades to deal with and carry through negotiations relating to the Workmen's Compensation Act and to

submit to the Government for enactment certain amendments if conditions warrant such action. This committee which was subsequently appointed, recommended for submission to the Government, a request for amendments to the Act as follows: That in total permanent disability cases the compensation payable be 66  $\frac{2}{3}$  per cent of the average wage but not less than \$10 per week unless the wages are less than \$10, in which case the compensation should be the amount of the wages; that the monthly allowance under the Act to a widow of a deceased workman be changed from \$30 to \$35; that the amount payable to a widow or invalid widower with children be changed to read \$10 instead of \$7.50 for each child under 16 years of age, and in addition \$35 for the widow or invalid widower, the compensation for the children, at the discretion of the Board, to be continued until they reach 18 years of age, for educational purposes, and that when the dependants are children only, the compensation be \$15 a month until they reach the age of 18 years, but in the whole not to exceed 75 per cent of the workman's average wages; an invalid child to receive compensation until it ceases to be an invalid or dies; that the minimum monthly allowance to a widow be \$30 and for each child \$7.50.

A committee was appointed by the convention to interview the executive council of the Government on March 15 in co-operation with representatives of the running trades. The president subsequently reported on the results of this interview, and stated that the replies of the Premier with reference to the various items of the programme were as follows: With reference to the request for the establishment of a Department of Labour the Premier stated that no action would be taken at present. He informed the committee that arrangements were being made for a Dominion-Provincial conference, as requested in the resolution adopted by the legislature last year, in connec-

tion with decisions of the International Labour Organization and that the Minister of Health was making arrangements for the protection of women before and after childbirth. With regard to the Election Act, he stated that as several places were experimenting with proportional representation, it was felt that it would be better to wait and see what the results would be. It was pointed out by him that there were no property qualifications now in provincial elections or in most civic elections, and as to election days being made public holidays, it was felt that the Dominion Government should act first and the provinces would follow. With regard to the Mining Act, he said that it was the intention of the Minister of Lands and Mines to visit the Minto district, and if found necessary to hold a conference as suggested last year. With regard to employment agencies, it was pointed out that where municipal authorities were willing to pay 25 per cent of the cost of the Dominion Government Employment Service offices, they would be established, but the Government could not see their way clear to abolish the private agencies yet. It was pointed out that the control of the storage of food stuffs came under the Dominion Government. Regulations providing for the examination and licensing of plumbers were now before the Government and would be passed soon. The premier announced that the Government had the question of the development of Grand Falls power under consideration and their policy would be announced later. With regard to the export of pulpwood, this was already prohibited so far as Crown Lands were concerned but it was considered a poor policy at present to have the export from private lands prohibited because of the amount of dead wood in the forest due to the bud worm, causing rot if not taken out at once. With regard to the request for free school books, it was pointed out that the Government was supplying school books at a loss now, having

had a deficit of some \$3,000 last year. It was stated that a Commission on the Mothers' Allowance and Minimum Wage Acts, which was promised last year, would be appointed during the present session of the legislature. With regard to the Workmen's Compensation Act, it was stated that many complaints were being made about the working of the Act, and in order to find out where the trouble lay, the Government intended to hold a conference of representatives of the Government, the Compensation Board, employers and

labour. This conference would be held either during the present session or immediately after.

It was decided to hold the next convention in Fredericton at a time to be fixed by the executive board.

The following officers were elected: President, J. E. Tighe, St. John; first vice-president, Dan Cripps, Chatham; second vice-president, J. A. Godfrey, Moncton; third vice-president, Harry Ryan, Fredericton; secretary-treasurer, George R. Melvin, St. John.

## STUDIES BY INTERNATIONAL FEDERATION OF TRADE UNIONS.

A SERIES of pamphlets on various industrial topics is in course of publication by the International Federation of Trade Unions ("The Second International"). Of this series Publication No. 3, dealing with the "Protection of Young Workers throughout the World," and Publication No. 4, on "Women and Children in the Textile Industry," have been received recently.

### Protection of Young Workers in Various Countries.

The first of these two pamphlets contains a summary of the existing protective laws for young workers. The aim of the compilers is to show how far some countries have gone along the path of reform and thus establish a general standard. They admit, however, that the publication is not to be considered as final or complete, but rather as a first attempt, to compile on an international basis a body of facts and data for the benefit of workers' organizations. A comparison of the laws in the wide field covered by the report presents great difficulties, owing in part to the continuous accumulation of amendments to existing legislation. Moreover, even the laws, if they could be fully presented and compared, would not be a full measure of the protection given in the various countries to young workers, since

such protection is afforded not only by legislation, but also under the terms of private agreements, or by a body of rules and regulations established by social custom or laid down by boards, councils and other extra-legal or semi-official bodies.

Tentative tables, however, are presented, showing the laws of twenty-nine countries governing the hours of labour of young persons in industry, minimum age of their employment, rules regarding dangerous trades, apprenticeship, public inspection and education. The first table sets forth the various existing provisions to regulate working hours. The regulations apply in most countries to young persons between the ages of 14 and 18 years. The countries which are at present below this standard age for admitting children to industry are France, Italy, Poland, Portugal, Roumania, Sweden, Argentine, British India and Japan, all these countries permitting children to be employed at a lower age than fourteen. Russia and some parts of Canada are shown as belonging to the most advanced class, the employment of boys and girls under 16 years being forbidden, and regulation continuing up to the age of 18 years.

The 8-hour working day for young workers is stated to prevail in Austria,

Belgium, France, Germany, Jugo-Slavia, Lithuania, Luxemburg, Poland, Portugal, Sweden, Spain, Czecho-Slovakia and Argentine. Russia goes still further by limiting the working day to 6 hours, and in Finland the legal day ranges from 6 to 8 hours. On the other hand Great Britain, Canada, and the United States have as yet no general limitation of the working day to 8 hours. The prohibition of night employment for young workers is fairly general, and most countries also impose strict limits on the employment of young workers below ground and in dangerous occupations.

In all countries the necessity of adjusting the antiquated system of apprenticeship to modern conditions is recognized, and workers are recommended to concentrate their efforts on securing the fundamental reform of the existing practice. In regard to the enforcement of the laws the report points out that in only ten countries are the workers directly associated in the work of the actual application of the laws to industry. The report contains a résumé of the conventions adopted at the various meetings of the International Labour Organization (League of Nations) and a table of the most important laws and orders of the various countries on the subject dealt with.

#### Women and Children in the Textile Industry.

Publication No. 4, giving the results of a survey of the hours of work and age of entry of women and children in the textile industry, was prepared by Dr. Marion Phillips, secretary of the International Federation of Working Women. Examination of the laws of the various countries shows little difference, the writer states, between the hours of women and those of children and young persons. "Nor is there any important difference between the hours of women and men. This is so in spite of the fact that in many countries, of which Great Britain may be taken as one of the chief examples, protective legislation as to hours has not affected

men." Men, it is claimed, have obtained similar conditions through trade union agreements rather than by means of legislation. The principal difference between laws as affecting men and women, respectively, is that night work is mostly forbidden for women and sometimes (as in Great Britain and Switzerland) Sunday work also. In France, where three shifts are worked in the textile trade, women may work only on the middle or day shift, while in several countries overtime is not permitted to women in certain processes.

The pamphlet concludes with an "International Programme" embodying the views of the trade unions in the various countries in regard to the work of women and young persons and conditions of their admission to the textile industry. The proposals as to the admission of children are mostly based on the programme submitted to the Washington Conference by the Joint Committee of industrial women's organizations in Great Britain. The "International Programme" proposes an 8 hour day and a 44 hour week for women, with two shifts throughout the industry and no overtime save in breakdowns, when only adults should be employed: minimum rest periods of one hour at mid-day, fifteen minutes in the morning and the same in the afternoon, or any other arrangement of the rest allowance preferred by the workers; payment for statutory holidays, and at least twelve days holiday in each year after six months' service; provision for maternity according to the Washington Convention; total prohibition of employment of children under fourteen years of age, this age to be raised within the next three years to sixteen; compulsory half-time attendance at continuation schools from the ages of sixteen to eighteen years within working days, that is, for twenty-two hours out of a 44 hour week; every child to pass medical and educational tests before admission to the industry, with remedial treatment until the normal standard is reached.

## DECISION OF JUDGE GALT RESPECTING LEGAL STATUS OF TRADE UNIONS.

**I**N view of the wide interest in the issues raised by the decision of Mr. Justice Galt in the Court of King's Bench at Winnipeg, in March, in the case of Chase and others vs. Starr, the full text of the judgment is printed below. The action was brought by Howard B. Chase and Wilmot H. Nash, general chairman and secretary treasurer respectively of the Canadian Division of the International Brotherhood of Locomotive Engineers, against Samuel Starr, former secretary of the same organization, to compel him to give an accounting of funds in his possession when he was relieved from office at the triennial convention held at Cleveland in May, 1921. Mr. Starr refused to surrender his office, claiming that he had not received notification that his services were dispensed with. The case came to trial in December, 1922, and was adjourned until January 15, 1923, when counsel for Mr. Starr asked leave to amend the statement of the defence in order to attack the legal status of the labour organization, claiming that it was operating in restraint of trade, and moving for non-suit. After three days of argument the judge reserved his decision. In the judgment, which was delivered on March 10, he non-suited the plaintiff.

The text of the judgment, which is of wide interest on account of its bearing on the legal status of trade unions in Canada, is reproduced in full herewith. It is stated that steps are being taken to carry the case to a higher court in appeal.

The text of the decision of Mr. Justice Galt is as follows:

This action is brought by Howard B. Chase and Wilmot H. Nash on their own behalf and on behalf of all members of the Brotherhood of Locomotive Engineers, and

of all other members of the General Committee of Adjustment in the employ of the Canadian National Railways. The plaintiffs allege amongst other things:

"2. The plaintiffs together with some two thousand other Locomotive Engineers in the employ of the Canadian National Railways, are members of a trade union known as the Brotherhood of Locomotive Engineers.

"3. The said membership of the said Brotherhood on the said railways compose nineteen Lodges or Divisions which are part of the parent organization known as the Brotherhood of Locomotive Engineers. The Brotherhood is a voluntary association or trade union with its headquarters at the City of Cleveland, in the State of Ohio, one of the United States of America, and it has a code of by-laws and regulations for the internal government of the said Brotherhood and its members to which as a condition precedent to membership and official position in the said Brotherhood and General Committee of adjustment, its members are bound to observe and conform.

"4. The said General Committee of Adjustment on the Canadian National Railways is composed of a Chairman, a Secretary-Treasurer and a Delegate from each of the said nineteen Lodges or Divisions of the said Brotherhood.

"5. The defendant was a member of the said Brotherhood and for several years prior to the 25th day of May A.D. 1921, was the Secretary-Treasurer of the said General Committee of Adjustment and as such was the custodian of the funds, vouchers, books, records and accounts of the said General Committee of Adjustment.

"6. Among other things it was the duty of the defendant to receive in trust from the various Lodges or Divisions of the said Brotherhood, the monies contributed from time to time by the membership for the expense, salaries and maintenance of the said General Committee of Adjustment and of its General Chairman and Secretary-Treasurer. It was also the defendant's duty during the time that he was the Secretary-Treasurer of the said General Committee of Adjustment to pay out the said money only when properly authorized by the said General Committee of Adjustment for the proper and legitimate purposes of the said General Committee of

Adjustment and to keep a true and correct accounting thereof and to turn over to his successor in office all the said monies, vouchers, books, records and accounts. On December 31st 1919, the defendant held in trust for the said purposes of the General Committee the sum of \$6,180.78.

"14. On or about the said 25th day of May A.D. 1921, the defendant was removed from his office of Secretary-Treasurer and the plaintiff Wilmot H. Nash, was elected pursuant to the said by-laws of the said Brotherhood as from the 29th day of August, A.D. 1921."

The plaintiffs allege that since the 31st December 1919, the defendant has received large sums of money, amounting in all to \$26,409.18, which he has failed to pay over or account for to the plaintiffs. The plaintiffs claim the above monies and an account.

The defendant denies most of the allegations made by the plaintiffs and alleges that he is not in default as regards his payments or accounting, but on the contrary he counterclaims for the sum of \$5,747.50 received by him from certain Lodges which had been suspended, and for himself the sum of \$389.70 as balance of account.

It is noteworthy in the above pleadings that the plaintiffs do not allege that the Brotherhood of Locomotive Engineers is registered as a trade union under the Dominion Trades Union Act, nor does it appear that any order was made appointing the plaintiffs Chase and Nash to represent the Brotherhood. On the other hand, the defendant has not denied the right of these persons to sue in the representative capacity alleged, and so under King's Bench Rule 335 the propriety of the representation is admitted. The defendant has not set up in his defence any allegation challenging the legal right of the plaintiffs to bring the action.

At the trial before me, commencing January 15th 1923, Mr. David Campbell, counsel for the plaintiffs, filed the constitution of the Brotherhood of Locomotive Engineers (Exhibit 2). During the discussion of the pleadings which took place on January 16th Mr. McArthur, counsel for the defendant, asked leave to amend the statement of defence by setting up the illegality of the plaintiff Brotherhood and Committee. No ruling was given at the time with regard to this request and the plaintiffs proceeded with the evidence and showed that although the plaintiffs had received from the defendant, after his dismissal, the sum of \$5,289.62, there were several thousand dollars not accounted for according to the view which the plaintiffs took of the defendant's account.

At the conclusion of the plaintiff's case, Mr. McArthur moved for a non-suit, basing his argument upon the contention that the plaintiffs were admittedly an unregistered trade union with a constitution which included many purposes and objects in restraint of trade; and consequently they were an unlawful organization and could not enforce any rights in a Court of Justice. Mr. David Campbell argued against the motion and quoted many of the leading English authorities in answer to this charge of illegality. As I have said, the defendant had failed to set up this defence. But on the other hand, the plaintiff had put in the constitution of the organization and consequently the question of illegality was plainly brought before the Court.

The conditions under which a defendant may or may not rely upon the plaintiff's illegality are carefully dealt with in *North-western Salt Co. v. Electrolytic Alkali Co.*, (1914) A.C. 461. Lord Moulton says at p. 475: "It is conceded that if a written contract is *ex facie* in restraint of trade so as to be against public policy, the judge is entitled and, indeed, bound, to take the point, and the decision is for him, and not for the jury."

If it should be considered necessary, in the present case, to plead the illegality relied upon, I think that the defendant should have that right. My own impression is that it is not necessary.

I reserved judgment on the motion for non-suit and the defendant proceeded with his evidence, but it was found advisable to adjourn the conclusion of the case until the results of a reference to the Master as to the accounts should be obtained.

The parties have both agreed to treat the Master's report as final in so far as his findings are concerned. I make the following extracts from it:

"1. The monies received by the defendant as referred to in paragraph 16, subsection C of the Statement of Claim amounted to \$29,602.95, and were paid to him as Secretary-Treasurer of the General Committee of Adjustment of the Grand International Brotherhood of Locomotive Engineers on that part of the Canadian National Railway formerly the Canadian Northern for the following purposes.

(A) The sum of \$375.00, part thereof, was paid as an assessment of \$2.00 per member for the payment of the expenses of delegates to the wage enquiry which resulted in the McAdoo award and and supplements thereto. These assessments were to have been remitted by the defendant to the Grand International

Headquarters and should not have been deposited with the funds of the General Committee of Adjustment.

(B) The sum of \$29,227.95, the remainder thereof, was received by the defendant from the twenty-two divisions of the Brotherhood of Locomotive Engineers, nine of which were suspended in May, 1920, and all but three since reinstated, and that all said money was paid to the defendant for the legitimate purposes of the General Committee of Adjustment.

"2. Out of the said sum of \$29,227.95, the defendant has properly paid out for the legitimate expenses of the General Committee of Adjustment sums amounting in all to \$20,348.70 for which amount and also for the sum of \$5,510.62 handed over by the defendant to his successor in office, the plaintiffs are willing that the defendant should be credited making a total credit to defendant of \$25,859.32."

Thirdly, the Master finds that the defendant was removed from office as Secretary-Treasurer on 25th May, 1921, but after his removal he paid out of the said funds sums amounting in all to \$3,155.93, for purposes connected with the establishment of a Canadian Association of Enginemen, which was to be altogether independent of the Brotherhood of Locomotive Engineers.

As a result of the Master's findings, Mr. Campbell claims that the plaintiffs are entitled to judgment for \$3,743.63.

I am indebted to the learned counsel on both sides for the able and comprehensive manner in which they presented their clients' cases.

I know of no case in the Canadian Courts defining the respective rights of a registered and non-registered trade union. The English decisions are almost our only guide. The subject is full of complexity, and I can see no escape from the necessity of tracing up the history of trade unions and the laws applicable to them, both in England and in Canada.

Among the outstanding authorities on trade union law is *Hilton v. Eckersley*, (1855) 8 E & B, 47. That happened to be a trade union of employers. A bond was made by eighteen employers, each binding himself in the sum of \$500, subject to certain conditions with regard to the conduct of their business. The bond recited amongst other things that there were certain societies or combinations of workmen who interfered with the property and establishments of the obligors; and whereas the said combinations were sustained by funds arbitrarily levied and extorted by

way of tax or rate on the persons employed by the said obligors respectively, and receiving wages from them, and it had become necessary to take measures for vindicating their legal rights for the control of their property, which would also best sustain the rights of the laborer to the free disposal of his skill and industry, etc., the Court of Queen's Bench decided that the bond was void as being in restraint of trade, and judgment was given for the defendant. Crompton, J. in delivering judgment, says, at p. 53; "The plea then stated that, except as it appeared by the condition, there was no consideration for the execution of the bond by the defendant: and that the bond was in restraint of trades, illegal and void." Page 54: "By recent enactments, carefully worded, combinations to raise or lower the rate of wages, and to regulate the hours of labor, are made no longer punishable. But those enactments do not make such combinations legal agreements in the sense that the breach of them can be enforced at law, and still less do they apply to make enforceable at law an agreement, not being a mere stipulation among the parties themselves which any one might withdraw from at his pleasure, but binding and tying themselves up, under a penalty, to close their works if a majority of a particular body shall dictate to them so to do. I think this bond void, as being in restraint of the freedom of trade, and from its mischievous and dangerous tendency, pointed out in the argument, with respect to strikes and combinations. The general principle of contracts in restraint of trade being void is perfectly well established, and this case does not appear to me to fall within any of the exceptions and relaxations which have been allowed as to that principle."

Page 55: "One of the most objectionable parts of this bond is that it takes away the freedom of action of the individual to carry on the trade, and to open and close his works according as it may be for his interest or that of the public. It appears to me obviously mischievous that the parties should give up this right of judging for themselves, and place themselves and their trades under the dictation either of a majority or of a committee of delegates, which seems the same in principle."

Page 56: "The same observation applies to the case of the workmen themselves. If this bond is legal, in the sense of being enforceable at law, a promise on the part of any individual workman not to retire from the strike, or to pay a weekly subscription to it, or to pay a penalty if he went to work without the leave of a majority of the meeting, or disobeyed the dictation of the delegates, would be binding upon him; and no workman would be able to free himself from the tyranny of such dictation, whatever might

be the state of his family, however reasonable he might think the offer of his masters as to wages, and although he might be perfectly satisfied, in his own mind, that the longer continuance of the strike was ruining himself, his family and his fellow workmen, and was doing incalculable injury to the public.

"It is said, indeed, that the object of the bond is to defend the parties, and to enable them to meet the combination of workpeople. But I think agreements of this nature, on the one side or other, or both, really tend to prolong the mischief; and, however right it may be that the masters or workmen should respectively stand by and assist each other in resisting what they consider unfair demands, yet that the giving up their individual right of judging and acting for themselves in matters so greatly affecting the public is mischievous and dangerous in the extreme I think it not to be endured that majorities and delegates, of workmen or masters, should in effect be allowed to legislate upon questions immediately affecting the happiness of the working classes and the prosperity of the trade and commerce of the whole nation."

Page 57: "It was contended on the part of the plaintiff, by Mr. Cowling, that some part of this agreement might be good, and that the bond, with reference to such part, would not be invalid. But I think that the illegality pervades the whole agreement, and that, part of the consideration of the bond being that the works should be closed according to the dictation of the majority, the whole instrument is illegal, even if part of the engagement of each obligor were held according to Mr. Cowling's argument to be legal."

The plaintiff appealed to the Exchequer Chamber, alleging error in the above judgment. The appeal was heard before six judges, and the judgment of the Court was delivered by Alderson B., affirming the judgment of the Queen's Bench. Alderson B., at p. 75: "*Prima facie*, it is the privilege of a trader in a free country, in all matters not contrary to law, to regulate his own mode of carrying it on according to his own discretion and choice. If the law has in any matter regulated or restrained his mode of doing this, the law must be obeyed. But no power short of the general law ought to restrain his free discretion. Now here the obligors to this bond have clearly put themselves into a situation of restraint.

"First: each of them is prevented from paying any amount of wages except such as the majority may fix, whatever may be the circumstances of the work to be done and his own opinion thereon. Secondly, they can only

employ persons for such times and periods as the majority may fix on, however much the minority may deem it for their own interest to do otherwise. The hours of work, the suspending of work, partially or altogether, the discipline and management of their establishments, is to be regulated by others forming a majority, and taken from every individual member. And all this for a fixed period of twelve months. All these are surely regulations restraining each man's power of carrying on his trade according to his discretion, for his own best advantage, and therefore are restraints on trade not capable of being legally enforced.

"We do not mean to say that they are illegal, in the sense of being criminal and punishable. The case does not require us and we think we ought not to express any opinion on that point."

To the same effect are the decisions respecting labour unions: See *Hornby v. Close*, (1866) L.R. 2 U.B. 153; and *Farrer v. Close* (1869), L. R. 4 Q.B. 602.

Such combinations, whether of employers or employees, being considered unlawful the parties to such combinations found themselves powerless to enforce their rights. Then followed the passing of the Trade Union Act, 1871. Its material provisions are as follows:

"2. The purposes of any trade union shall not by reason merely that they are in restraint of trade, be deemed to be unlawful, so as to render any member of such trade union liable to criminal prosecution for conspiracy or otherwise.

"3. The purposes of any trade union shall not, by reason merely that they are in restraint of trade, be unlawful so as to render void or voidable any agreement or trust.

"4. Nothing in this Act shall enable any Court to entertain any legal proceeding instituted with the object of directly enforcing, or recovering damages for the breach of, any of the following agreements, namely,—

(1) Any agreement between member of a trade union as such, concerning the conditions on which any members for the time being of such trade union shall or shall not sell their goods, transact business, employ, or be employed;

(2) Any agreement for the payment by any person of any subscription or penalty to a trade union;

(3) Any agreement for the application of the funds of a trade union,—

(a) To provide benefits to members; or,

(b) To furnish contributions to any employer or workman not a member of such trade union, in consideration of such employer or workman acting in conformity with the rules or resolutions of such trade union; or,

(c) To discharge any fine imposed upon any person by sentence of a Court of Justice; or

(4) Any agreement made between one trade union and another; or,

(5) Any bond to secure the performance of any of the above mentioned agreements.

But nothing in this section shall be deemed to constitute any of the above mentioned agreements unlawful."

Under section 5, all real and personal estate belonging to any union could be vested in trustees for the union, who would have power to sue and be sued in regard to it.

"23. The term 'trade union' means such combination, whether temporary or permanent, for regulating the relations between workmen and masters, or between workmen and workmen, or between masters and masters, or for imposing restrictive conditions on the conduct of any trade or business, as would, if this Act had not passed, have been deemed to have been an unlawful combination by reason of some one more of its purposes being in restraint of trade; Provided that this Act shall not affect:—

(1) Any agreement between partners as to their own business;

(2) Any agreement between an employer and those employed by him as to such employment;

(3) Any agreement in consideration of the sale of the goodwill of a business or of instruction in any profession, trade, or handicraft."

Shortly after the passing of the Act, Jessel, M.R., in 1880, was called upon to construe the Act, which he did in *Rigby v. Connol*, 14 Ch. D. 482. It appeared that the union there in question, like most other unions, provided certain benefits for its members in addition to its trade purposes. Jessel, M.R. says at p. 489; "It is under the first portion of the rules that the plaintiff has a direct interest, that is, he has a right to participate in benefits by virtue of having paid his subscriptions. That being the position of the plaintiff, we must consider what the Trade Union Act, 1871, provides. That Act, no doubt was passed primarily with a view to preventing the treasurers and secre-

taries and officers of these societies from robbing them; that was the chief object. It was discovered that some of these men abusing the confidences reposed in them, took advantage of the law which made these societies illegal, by appropriating their funds and property to their own use. That, no doubt, was one of the principal objects and therefore the Act was passed to get at these men. Another object was this; there was a great difficulty in suing and getting their property from third person, and one object of the Act was to enable these societies to sue in respect of their property, and also to enable them to hold property, such as a house or office, but it was not intended that the contracts entered into by the members of the society should be made legal contracts *inter se*, nor that Courts of Justice could interfere to enforce them. If that had been intended the result would have been this, that an agreement between a number of workmen once entered into, compelling them to work in a particular manner, or to abstain from working in a particular manner, would have been enforceable according to law, and to a certain extent would have reduced some portion of the workmen to a condition of something like serfdom and slavery. Of course, the Legislature, by interfering, had no idea of doing anything of that sort."

In the year 1872, (35 Vict. cap. 30) this Trade Union Act was introduced into Canada almost in *ipsissimis verbis*, except that, under sec. 5, the Act should not apply to any trade union not registered under the Act.

In 1876, it was found advisable in England to correct certain defects in their Act. One of them was the definition of a trade union.

In *Russell v. Amalgamated Society of Carpenters*, (1912) A.C. at p. 440, Lord Robson gives the following explanation of the defect: "This definition gave rise to the anomalous situation that, before a trade union could take advantage of the benefits of the Act with regard to registration &c., it had to prove that its rules were in restraint of trade, for it was only to such combinations that the Act applied. This was remedied by the amending Act passed in 1876, whereby the definition was made to include trade unions whether they were in restraint of trade or not, but this amendment does not substantially detract from the force of the foregoing observations as to the assumed state of the law prior to the passing of the principal Act."

In Canada we have retained the Act of 1871 (passed in 1872) with its original defects, and the provision which was not in the English Act, that our Act should not apply to any trade union not registered under the Act. The only change made in the Revis-

ed Statutes of 1886 and 1906 (cap. 125) was to transpose sec. 22 into sections 2 and 3. Under sec. 2 of our Act, it would appear that Parliament considered all trade unions, *eo nomine*, to be unlawful combinations "but for this Act."

In Fry on Specific Performance, 5th ed., sec. 486, it is said: "Trade unions being, apart from the Trade Union Act, 1871, illegal associations, the Court will not by reason of the terms of section 4 of that Act, at the instance of a member of such an union enforce a contract contained in its rules for providing benefits for its members."

In Yorkshire Miners' Association v. Howden, (1905) A.C. 256, Lord Lindley says at p. 279: "My Lords, before the Trade Union Act, 1871, was passed, trade unions were unincorporated societies not recognized as legal, and in that sense, at least, they were held to be illegal on the ground that their objects were to restrain freedom of trade and were against public policy. Neither Courts of Law nor Courts of equity would recognize or enforce the rules of such societies or the trusts on which their funds were held. By the Act in question trade unions were freed from the illegality which was the consequence of being regarded as against public policy. Their rules and trust can no longer be treated as invalid by reason of their being in restraint of trade. They may be illegal or unenforceable on some other ground, and if they are the Act of 1871 does not in any way legalize them or affect them."

In Russell v. Amalgamated Society of Carpenters, (1912) A.C. 421, the respondent society was held, notwithstanding its registration to be an illegal association at common law, inasmuch as its main purposes were in unreasonable restraint of trade and the rules relating to those purposes were not separable from the rules relating to its provident purposes. At p. 429, Lord Macnaghton says: "A trade union is merely an unincorporated society of individuals. The designation does not of itself import illegality. There have been many and probably there may be still some trade unions lawful in every point of view, and not depending for their legality or for their immunity on the Act of 1871. This proposition is recognized plainly in the definition of a trade union contained in the Act of 1876. In the case of a trade union not dependent on the Trade Union Acts for its legality or immunity the law is open to the members of the society just as it is in the case of other voluntary societies for the purpose of enforcing contractual rights and trusts against the association.

"The only question, therefore, seems to be this: Is this trade union, apart from the Act

of 1871, a lawful association? The answer must depend on a consideration of its purposes as manifested in its rules."

It would appear from Lord Macnaghton's judgment, that there actually were many trade unions not depending for their legality on the Act of 1871, and it would seem to follow that "the law is open to the members" of such societies for the purpose of enforcing their contractual rights. This is an important point to bear in mind having regard to section 5 providing that our Act shall not apply to any trade union not registered under the Act. To such a society registration would impose shackles instead of removing them, for when once such a society became registered no Court could entertain any of the legal proceedings set forth in section 4.

The views expressed by Lord Lindley and Lord Macnaghton are widely divergent, but they are both *obiter dicta*. Lord Lindley's view has been adopted by Lord Justice Fry in his work above quoted, and it corresponds with the apparent meaning of our Trade Union Act. If this view be correct, the plaintiffs in this action are out of Court, for being an unregistered trade union they are wholly incapacitated from enforcing any legal rights. The Brotherhood of Locomotive Engineers is said to have been organized in or about the year 1864, and it is recognized throughout the continent of North America as one of the most reputable and honorable organizations. Counsel say that they know of no case in which the plaintiff Brotherhood has ever had its legality challenged in any Court. For this reason I prefer to adopt Lord Macnaghton's view, and to deal with this particular trade union as one which may or may not be able to enforce its rights in Court. Whether it can do so or not depends upon the construction to be given in its purposes as disclosed by its constitution (Exhibit 2). I extract the following: Page 5, sec. 3. "The G. I. D. (Grand International Division) shall have exclusive jurisdiction over all subjects pertaining to the Brotherhood, and its enactments and decisions upon all questions are the supreme law of the Brotherhood, and all divisions and members of the Order shall render true obedience thereto."

"Sec. 4: The meeting of the G.I.D. shall be held triennially in May at Cleveland."

"Sec. 8: The Grand Chief Engineer shall devote his whole time to the interests of the Brotherhood. He shall be official head of the Order, and have the general direction of the Assistant Grand Chiefs in their work, and shall exercise full control over the Grand Office in general."

Page 15, sec. 31: "The Grand Dues shall be six dollars (\$6.00) per year, payable as per section 33, and every member shall be considered a subscriber to the Journal. One dollar of the Grand Dues will be applied to the Journal; one dollar applied to the Reserve Fund; two dollars to be placed in the General Fund to defray the expenses of the organization; two dollars to be placed in the Indigent Fund."

Page 18, sec. 39: "All brothers engaged in a legalized strike, and all brothers who lose their positions on account of the interest they take in Brotherhood matters, upon satisfactory evidence of such facts being presented to the Grand Officers shall receive \$40.00 per month for a period of six months, unless they get employment sooner."

Page 33, sec. 28: "All candidates before being initiated into the Brotherhood shall take the required examination and fill out the application for one or more policies in the B. of L. E. Mutual Life and Accident Insurance Association, etc."

Page 38, sec. 46: "Should it become known to any member of this Brotherhood that a member thereof has been guilty of having in any way violated any law, rule or regulation of the order, it shall be his duty to at once bring charges in writing against such member before the Division to which said offending member belongs, and the Division shall proceed as per section 49. Section 49 prescribes the mode of trial."

Page 39, sec. 50: "Should any member of the Brotherhood be found guilty of any offence described in sec. 46, of the Statutes, he shall be subject to the following penalties; First, expulsion; second, suspension; third, reprimand; fourth, censure. The ballot to be taken on the severest penalty first, and so on down until the penalty is fixed on the offender."

Sec. 51: "Any member of the B. of L. E. who takes the place of anyone engaged in a strike recognized as legal by the B. of L. E. shall be expelled when proven guilty, and shall forever be ineligible for readmittance to this Brotherhood."

Sec. 57: "Any member refusing to sustain the action or to carry out the instruction of the General Committee of Adjustment of the system on which he is employed, shall, upon conviction by his Division as per sec. 49, be expelled for violation of obligation."

Sec. 83: "There shall be a card termed a Withdrawal Card, for the use of members who are permitted to withdraw from the B. of L. E. It shall state the name and age of the member to whom it is issued; also his reasons for desiring it, and shall bear the

signature of the C. E. and Secretary-Treasurer and bear the seal of the Division.

"Any member requesting such card shall state to his Division, in writing, the reasons why, and his age and present employment, which statement shall lie over to the second regular meeting before final action upon it can be taken. If at the expiration of that time the member receives a two-thirds majority vote of the members present in favor of his request, it shall be granted, and he shall be declared no more a member of the B. of L. E.; provided that under no circumstances shall a withdrawal card be granted a member during a strike of the B. of L. E., or who retains his seniority, or to one who is in or intends to engage in a business forbidden by the laws of the Organization."

I quote the following provisions from the Standing Rules, on page 77, sec. 33: "Members are prohibited from signing any contracts with a railroad company, or making any verbal agreement without the consent of the General Committee of Adjustment of the system on which they are employed, under penalty of expulsion."

In May 1918, an agreement known as the Chicago Joint Agreement, was entered into between the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Engineers. On page 97 of the Constitution the following Article appears: Art. V (a). When a member of either of these organizations has been expelled for any cause, except non-payment for dues and assessments, the lodge or division shall notify the other organization of such expulsion, together with a statement of the cause. (b) A member or an ex-member of either of these organizations shall not be admitted to membership in the other until he is square on the books of the organization to which he had originally belonged.

Art. VII (a). When a strike is called by one organization, the members of the other organization shall not perform any service that was being performed before the strike was called, by the members of the organization who are on strike.

Under the provisions affecting pensions I extract the following, page 112, sec. 6: Any member who takes a final withdrawal card from the B. of L. E. forfeits membership herein, together with all rights and interests that he may then have, or may have had, in this Association, at once.

Page 118, Art. IX, sec. 2: Any member of this Association, who has been declared a pensioner by the Board, who shall have paid dues shall be entitled to pensions varying with the number of months they have paid their dues, such pensions varying from \$30.00 to \$65.00 per month.

Provisions for insurance are part and parcel of the organization but for business reasons are conducted by a Company incorporated for the purpose.

In addition to the General Constitution, from which I have made the above extracts, the defendant put in portion of a printed document called the ritual of the order (exhibit 18) from which I extract the following, at p. 50, sec. 1: "Resolved, that in the event of a question of wages or other causes, where the Brotherhood is likely to be involved in an issue with a railway company, or its officials, or when a strike is in progress on any road, no one will be permitted to take an active part in the deliberations of any Division while the question at issue is under discussion, unless he be in active service as a Locomotive Engineer or employed exclusively by the Brotherhood. The Engineers on every railroad shall settle their grievances with their own general committee of adjustment, if possible. Failing to do so, however, they may call on the Grand Chief Engineer, who in conjunction with two-thirds majority of said committee, shall have full power to give permission to poll the road; but after such permission has been granted, the Engineers on said road shall decide whether they will quit work or not by a two-thirds vote of all the members who are employed on the system where the trouble exists, subject to the approval of the Grand Chief Engineer. But the Brothers belonging to the Divisions who are not employed on the system where the trouble exists shall not be allowed to vote upon the question, and if it is decided to stop work, they shall be sustained by the Brotherhood, and the executive committee shall be empowered to levy an assessment on all members of the Brotherhood who are earning more than \$50 per month, except honorary members, for their assistance. The Brothers so out of work shall receive \$40.00 per month for six months, if out of work for that length of time."

"Sec. 5: Resolved, that should any member of the Brotherhood disclose in any way or form whatever, to any person or persons not members of the Brotherhood, any of the proceedings of the Division to which he belongs, or to any other Division, or any plan, project proposition, or private matter of whatever nature, concerning the Brotherhood at large, and which if made public, would be calculated to injure in the slightest degree the best interests of the Brotherhood, he shall, on conviction, be considered as having violated his obligation by thus betraying the secrets of the Brotherhood, and shall be ignominiously expelled from the Division and his name, together with the cause of his expulsion, shall be forwarded to the Grand Office. Any member thus expelled shall not

be eligible for membership in the B. of L. E., until after a period of five years from the date of his expulsion when he may be reinstated by a two-third vote of all the members present at a regular meeting of the Division from which he was expelled. The application for reinstatement must lay over two regular meetings."

The question is whether the provisions of the plaintiff's constitution are such as to preclude the plaintiffs from enforcing their claim in a court of law. Many of the points which I have to deal with were carefully considered in *Russell v. Amalgamated Society of Carpenters*, (1912) A.C. 421. The appellant was the widow and personal representative of James Russell, deceased, a carpenter who was for upwards of forty years a member of the respondent Society—a registered trade union. The appellant brought an action for payment of certain monies representing superannuation benefits to which she alleged the deceased was entitled under the rules of the Society at the time of his death. The Respondents resisted the claim and pleaded their own illegality. It was a shameful defence and one which any Judge would be astute to overcome if possible, but the defence was held to prevail. I make the following quotations from the judgment of Lord Shaw of Dunfermline, commencing at p. 433: "The learned judges of the Court of Appeal have made, if I may presume to say so, a most careful analysis of those rules. In view of the importance of the question, and out of respect to these learned judges I have thought it right to make an independent examination of the rules on my own behalf. Having done so, I cannot say that I am free to express any surprise that the counsel for the association should have frankly admitted that they were in restraint of trade, and should upon that have grounded his argument for the exclusion of this action from the cognizance or determination of a Court of Law. They contain careful provisions for the internal government of the society, and there is conferred upon the managing committee, the united trade committee, and the branch committees, powers of command, control, and government which are of the most far-reaching and effective character. Under various rules provision is made for expulsion from the society, and a frequent reference is made to rule 48—rule 4, for instance, providing for a fine, suspension, or expulsion, 'upon satisfactory proof being given that such member has acted contrary to the provisions of rule 48, clause 1'; and by rule 27, which affects the duties and powers of officers conducting trade movements, power is given to those committees to fine, suspend, or expel any member who has refused to comply with the committee's decision, or has violated any of the conditions of the same rule, namely, rule 48.

The last mentioned rule itself provides in most comprehensive terms for fine, suspension, or expulsion of any member upon satisfactory proof being given that such a member has refused to comply with the decision of a managing committee, branch committee, or branch. Under the organization, accordingly, it is apparent that the workman, considered as a free disposer of his own labor, is thus confronted with a situation of great seriousness should his freedom conflict with the decisions of any of the committees referred to. He is further exposed to liability to fine, suspension, and expulsion if he has 'wilfully violated the recognized rules of the district in which he is working' or takes 'a sub-contract or piecework' or is working for those classes of Employers, or fixing, using, or finishing work made under unfair conditions either at home or abroad, the judgment upon this subject being apparently the judgment of the governing bodies referred to."

Almost every word of this extract applies to the case under consideration, but Lord Shaw proceeds to say: "So far as the individual liberty of the worker is concerned, it is accordingly fairly plain that trade in respect of him is restrained, but that would not be sufficient to satisfy the conditions of unlawfulness unless these were also such as to affect trade in general or the public at large. Upon this subject, it, however, appears that provisions are made for granting assistance to other trades and for levies of three pence per week per number 'in the event of any great struggle between capital and labor in our own or any other trade.'"

"My Lords, I have only indicated these points from the rules for the purpose of saying that the course adopted by the counsel for the association was the perfectly natural and proper course of a frank admission that these rules are, in fact, in restraint of trade. They mean, and appear, to provide the materials and machinery under which, according to the decision and at the direction of the officials of the association, a particular trade may not merely be restrained, but, by concerted action with other branches of industry that trade and the trade of the country at large may be actually paralyzed."

Lord Shaw expressed his approval of the analysis made by the Lords Justices of the Court of Appeal in the Court below (1910), 1 K. B. 506. The following extracts from the report in the Court of Appeal will make clear the ground upon which that Court based its finding (page 509).

"Rule 36, which was headed 'Trade Privilege' contained provisions as to allowing the strike pay to members . . . Clause 6 provided that 'all members out of employment previous to or during the progress of a

strike, or lock-out, in the ship or house building trade, where at least one-sixth of the members of any district or branch are affected, if not disentitled in accordance with clause 2 of this rule shall be entitled to trade privileges, irrespective of the branch of trade they were last employed at. Any member in receipt of trade privileges shall be supported as per rule until he again obtains employment, provided that no member shall receive strike pay for more than six weeks after the close of a strike or lock-out, but, should he, during the progress of a strike or lock-out, obtain temporary employment in the district in which the dispute is pending, he shall be entitled to strike pay should he be discharged before the expiration of six weeks subsequent to the close of the dispute.'"

"Rule 43 was headed 'Misconduct of Members'. Clause 1 provided that, It shall be competent for any managing committee, branch committee, or branch at a special or quarterly meeting, to fine (the amount not to exceed £2), suspend, or expel any member from the society upon satisfactory proof being given that such member has refused to comply with their decision, or by his conduct brought the society into discredit, wilfully violated the recognized rules of the district in which he is working, taking a sub-contract or piecework, or working for either of these classes of employers (sub-contractor or pieceworker being defined as a person taking the labor of a job only, and not supplying the material) or fixing, using, or finishing work which has been made under unfair conditions, either in the United Kingdom or abroad, or contrary to the recognized trade rules of the district in which it has been prepared, or has fraudulently received or misapplied the funds of the society, or the monies of any member or candidate intrusted to him for payment to the society; or belonging to any labour bureau, or similar institution, or holding any official capacity in the same."

In considering the purpose of a trade union as disclosed by its constitution, one must judge of those purposes, not by the usual practice of the organization, but by the powers which may be exerted under the rules.

One of the most far-reaching "restraints of trade" is a strike. In England it is well settled that strikes may be legal or illegal, according to their mode of origin, or the methods adopted in carrying them out.

In Canada we have the Industrial Disputes Investigation Act, 1907, which introduces material qualifications affecting the legality of strikes. Sec. 56 provides that: "It shall be unlawful for any employer to declare or cause a lock-out, or for an employee to go on strike, on account of any dispute prior to

or during a reference of such dispute to a Board of Conciliation and Investigation under the provisions of the act, or prior to or during a reference under the provision concerning railway disputes in the Conciliation and Labour Act."

In *Rex v. McQuire*, 16 O. L. B. 522, the Divisional Court of Ontario (Mulock, C. J. Clute and McGee, J. J.) held that the prohibition by the statute of lockouts or strikes "prior to or during a reference" of the dispute to a Board, does not apply only to cases in which one of the parties to the dispute has made application for the appointment of such a Board, but makes all lockouts and strikes illegal until there has been such a reference, and the Board has made its report thereon.

In the constitution of the Brotherhood of Locomotive Engineers the following provisions appear:

1. The Grand International Division, having its head office at Cleveland in the United States, is given exclusive jurisdiction over all subjects pertaining to the Brotherhood, and its decisions are the supreme law of the Brotherhood (sec. 3)

2. All Brothers engaged in a legalized strike (i.e., a strike declared to be legal by the Head Official), and all Brothers who lose their positions on account of the interest they take in Brotherhood matters, upon satisfactory evidence of such facts being presented to the Grand Officers, shall receive \$40 per month for a period of six months, unless they get employment sooner (sec. 39).

3. Any member of the B. of L. E. who takes the place of anyone engaged in a strike recognized as legal by the B. of L. E. shall be expelled when proven guilty, and shall forever be ineligible for readmittance to this Brotherhood (Sec. 51).

4. Members are prohibited from signing any contracts with a Railroad Company, or making any verbal agreement without the consent of the general Committee of Adjustment of the system on which they are employed, under penalty of expulsion (p. 77, sec. 33).

5. Under the so-called Chicago Joint Agreement, entered into between the Brotherhood of Locomotive Engineers and the

Brotherhood of Locomotive Firemen and Engineers, the following provision appears: "When a strike is called by one organization, the members of the other organization shall not perform any service that was being performed before the strike was called, by the members of the organization who are on strike (p. 97, Art. VII 2).

6. The so-called ritual (Exhibit 18) sec. 1, contains a lengthy procedure for declaring a strike, after a two-thirds vote of all members who are employed on the system where the trouble exists. The remaining one-third of the men have no power to continue work, if they so desire, but must join in the strike.

Mr. Campbell strenuously argued that if a member objected to the strike and desired to continue his employment, he could readily withdraw from the Brotherhood.

But under sec. 83 of the Constitution, it is "Provided that under to circumstances shall a withdrawal card be granted a member during a strike of the B.E." nor at any other time without complying with the procedure laid down in that section.

I cannot resist the conclusion that the provisions in the Constitution and Ritual of the Plaintiffs relating to strikes, are open, under our Canadian law, to the same objection as were the Rules of the respondent in *Russell v. Amalgamated Society of Carpenters*. They are in distinct restraint of trade, and render the plaintiffs an unlawful trade union to the extent of preventing them enforcing rights in a Court of Law. It is unnecessary to decide whether, or to what extent, they could have enforced their claim against the defendant, if they had registered their organization under the Trade Union Act.

The defendant's counterclaim is entirely without foundation. The evidence given by him on examination for discovery shows that he had no authority to sue on behalf of those whom he purports to represent; and the Master's report shows nothing due to him.

For the above reasons I allow the defendant's motion for non-suit with costs and dismiss the defendant's counterclaim with costs.

The case was one of importance and difficulty, the argument alone lasting over three days, so I direct that the costs of both parties be taxed irrespective of the statutory bar.

## WORKMEN'S COMPENSATION IN CANADA.

---

### A Comparison of Provincial Laws as existing in 1923.

**A**N outline of the provisions of the Workmen's Compensation Acts of the various provinces of Canada was given in the LABOUR GAZETTE for August, 1920. Since that time many amendments have been made, a tendency towards uniformity being noticeable, and the provincial acts in their present form may again be compared. The previous article reviewed briefly the history of this class of legislation, noting that the principles underlying workmen's compensation passed through three stages before compensation was definitely established by law in the form now widely accepted. These stages were: first, the earliest period, when responsibility for accidents was, under common law, fixed only upon employers directly guilty of negligence, the workers being obliged to take all the other risks of their employment including the risk of injury by their fellow employees; second, the period which began in Great Britain in 1880, when employers, even in cases where negligence was not chargeable, were held liable for injuries resulting to their employees from any unforeseen breakdown in plant, or from the negligence of fellow workmen, with the limitation, however, that the employers were not held liable in cases where the injured employees were guilty of contributory negligence; third, the period, opening with the British Workmen's Compensation Act of 1906, when the right of the worker to full protection against all "professional risks," that is, the risks inherent in his trade and arising out of his employment, was fully recognized. Compensation for industrial accidents has during the latter period been provided by law in all the Canadian provinces, except Prince Edward Island.

The type of Workmen's Compensation now established in six provinces consists of the compulsory insurance of employers in a state fund administered by a Board, the whole cost of compensation to workmen for accidents arising out of and in the course of employment being met by collective contributions to the fund by the employers, the province making annual allowances towards the cost of administration. Ontario was the first province of Canada to adopt this plan, the system of state insurance against industrial risks being embodied in an act passed in May, 1914, on the lines of a report presented by Chief Justice Sir William R. Meredith, who had been commissioned by the province in 1910 to study and report on systems of workmen's compensation existing in other countries, and to draft a bill suitable for the province. In his report the Commissioner said:

"There are two main types of compensation laws. By one of them the employer is individually liable for the payment of it, and that is the British system. By the other, which may be called the German system, the liability is not individual but collective, the industries being divided into groups and the employers in the industries in each group being collectively liable for the payment of the compensation to the workmen employed in those industries—practically a system of compulsory mutual insurance under the management of the State. The laws of other countries are of one or other of these types, or modified forms of them, and in most, if not all of them, in which the principle of individual liability obtains, employers are required to insure against it." The Commissioner came to the conclusion that "a compensation law framed on the main lines of the German law with the

modifications I have embodied in my draft bill is better suited to the circumstances and conditions of this province than the British compensation law, or the compensation law of any other country." He further stated that "it is in my opinion essential that as far as is practicable there should be certainty that the injured workman and his dependants shall receive the compensation to which they are entitled, and it is also important that the small employer should not be ruined by having to pay compensation, it might be, for the death or permanent disability of his workmen caused by no fault of his. It is, I think, a serious objection to the British Act that there is no security afforded to the workman and his dependants that the deferred payments of the compensation will be met, and that objection would be still more serious in a comparatively new country such as this, where many of the industries are small and conditions are much less stable than they are in the British Isles. This objection could, of course, be met by making it obligatory upon the employer to insure his workmen against accident to the maximum amount to which they or their dependants would be entitled under the Act, but if insurance is to be compulsory I see no reason why the cheapest form of it — mutual insurance — should not be prescribed."

The example of Ontario in establishing a system of state insurance was followed by five other provinces as follows: Nova Scotia, 1915; British Columbia, 1916; Alberta, 1918; New Brunswick, 1918; Manitoba, 1920. Manitoba had in 1916 established a Board to administer an accident fund set up by private insurance companies in which employers coming under the act were required to insure, the Board deciding claims and making payments according to the scale fixed by the act. The act of 1920 superseded this system by a system of state insurance similar to that in the five other provinces. Quebec and Saskatchewan still retain the systems instituted under acts of May, 1909 and March, 1911, res-

pectively, which enable workmen to obtain compensation from their employers individually through private insurance companies or by means of actions in the courts. The Quebec Legislature, at the second session of 1922, authorized the appointment of a special commission to consider and report upon the subject of workmen's compensation.

The Dominion Parliament, in 1918, enacted a law providing that Federal Government employees should receive such compensation in case of accidents, as they or their dependents would receive in private employment in the province where the accident occurred, the amount of compensation to be determined by the Provincial Board or other authority in such cases, and paid by the Dominion Government (Employees of the Intercolonial and Prince Edward Island Railways may elect between compensation under this act or under the Intercolonial and Prince Edward Island Railway Employees' Provident Fund Act).

The accompanying table shows for purposes of comparison the chief features of the Workmen's Compensation Acts of the various provinces, as amended to the present time; a similar table comparing the acts as then existing was given in the report of the Dominion-Provincial Commission on the Uniformity of Labour Laws, reproduced in the LABOUR GAZETTE for May, 1920.

*Workmen's Compensation Boards.* — The Boards in the six provinces having "state" systems of workmen's compensation consist each of three members. In British Columbia the term of office is limited to ten years, but in the remaining five provinces the Board members hold office during good behaviour. In Nova Scotia, New Brunswick, Ontario and Manitoba, however, the age limit is fixed at 75 years. The Boards have authority to divide industries into classes according to risks, to fix rates of assessment suitable to each class with preferential or merit rating in favour of industries having good accident records

and to collect premiums, decide claims and pay compensation. On all these matters the Boards of Ontario, Manitoba, Alberta and British Columbia have final jurisdiction, while the laws of Nova Scotia and New Brunswick allow appeals from the Boards' decisions to the Supreme Court, but only upon questions of law or jurisdiction and with the permission of a judge of the Court.

*Industries included.*—The Workmen's Compensation Acts cover practically the whole industrial field, including manufacturing, construction, lumbering, mining and quarrying, transportation, public utilities, together with the various occupations incidental to these main groups. In Ontario however, certain industries (including municipal undertakings, railways and carshops, telegraphs, telephones, etc.) instead of contributing to the general compensation or accident fund, are individually liable to pay compensation. Other occupations, with the exception of those which are specifically excluded, may be brought in on the application of the employers with the Board's approval. In Alberta, moreover, the consent of the employees is also required. The exempted classes in most provinces include travellers, casual labourers, out workers, domestic servants, and farm labourers. Last year, however, Nova Scotia passed an amending act which provided for the admission of farm labourers and domestics, on the application of their employers; while British Columbia admitted farm labourers and repealed a former rule excluding office-workers. The latter class is still excluded in New Brunswick and Manitoba. Quebec and Saskatchewan exclude farm labourers, as well as all employees earning \$1,500 or \$1,800 or more yearly, respectively.

*Waiting Period.*—The minimum period of disability for which compensation is allowed under the various acts ranges from three to seven days. Nova Scotia, New Brunswick, Ontario and Saskatchewan allow compensation only when disability lasts for seven days at least, but

payments date from the date of disability. In Quebec also the waiting period is seven days, with compensation for total and permanent disabilities from the date of injury, and for temporary disability from the end of the first week. In Alberta a workman who is incapacitated for at least 10 days is compensated from the date of injury, but for shorter periods of incapacity the first three days are not reckoned.

*Filing of Claims.*—The time limit for the filing of claims also varies in the different provinces. In Nova Scotia, New Brunswick, Manitoba and British Columbia, claims must be made on behalf of the workmen or their dependents within a year from the date of injury. This period may, in Nova Scotia, be extended at the Board's discretion. Authority to extend the time limit is also vested in the Boards of Ontario and Alberta, where the regular limits are fixed at six months and three months respectively.

*Non-resident dependents.*—Nova Scotia, Ontario and Manitoba allow compensation to dependents residing abroad, but on the condition that in the place or country in which they reside similar provision is made in regard to accidents to foreign workers. An order-in-council to the same effect was issued in 1919 under the New Brunswick Act. The British Columbia Act lays down the principle that "no person shall be excluded as a dependent because he is a non-resident alien"; by an amendment of 1919 the scale of compensation in the same province may be modified by the Board in accordance with the cost of living in the country where the dependents reside, so that the actual benefits given to foreign dependents may not be in excess of those given to dependents residing in Canada. In Alberta foreign workmen after residence in Canada for one year, and British subjects after residence for two years, are presumed to have no dependents in their own country except their parents.

*Accidents outside Province.* — Provision is made in the various acts in regard to accidents which happen outside the province concerned. The Nova Scotia Act, having in view the fishing among other industries, requires employers to apply for certificates authorizing their admission. In New Brunswick, workmen who are paid within the province but perform their work in an adjoining province or country are considered as employees within the meaning of the act. In Ontario, Alberta and British Columbia compensation is payable to a workman if he resides in the province and the employer's chief place of business is in the province, the work being carried on outside as well as within the province. Manitoba provides compensation in cases where the employee's work is performed on both sides of the provincial boundaries.

*Safety Rules.* — Rules for the purpose of diminishing industrial risks may be issued under the various acts, in British Columbia and Alberta by the Boards directly, and in Nova Scotia, New Brunswick and Ontario by authorized employers' associations for accident prevention. Regulations issued by Boards may call for specified safety devices and appliances and proper sanitary arrangements. Employers associations issuing rules must satisfy the Board that they are representative of their industry, and their rules when approved by the Board are held binding on all employers in that class.

*Medical Aid.* — In addition to compensation benefits medical service to injured employees is provided under the acts of Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta and British Columbia. In all these provinces the expenses of such service are met from the Board's accident fund. In British Columbia, however, the workers themselves contribute to the accident fund at the rate of one cent per day, this amount

being retained by the employer from wages and forwarded by him to the Board to be used for the purpose of medical aid. A similar deduction is made in Alberta, the actual amount deducted each day being left to the Board. (At the present time the amount deducted is one cent per day). Employers are authorized to adopt their own methods, subject to inspection and approval by the Board, and are reimbursed from the accident fund. In British Columbia, Manitoba, New Brunswick, Nova Scotia and Ontario medical aid includes medical, surgical, nursing, hospital service and transportation; the Boards of Manitoba and Ontario also provide crutches, artificial limbs and other apparatus. Nova Scotia furnishes medical aid only within a limit of 30 days. All the provinces having boards make provision for the installation of first aid appliances. In Quebec the cost of burial and medical aid in fatal cases may not exceed \$50.

*Scale of Compensation.* — The scales of benefits under the various provincial acts are shown in the accompanying table. During the past three years the maximum amount allowed for burial expenses was raised in Ontario from \$75 to \$125, and in Manitoba from \$100 to \$150. In Saskatchewan the maximum total benefit in all cases of death or disability was raised from \$2000 to \$2500. The amount of funeral benefits in New Brunswick, Alberta, and British Columbia remains at \$100; in Nova Scotia at \$75 and in Quebec at \$50, the latter sum including medical expenses. Nova Scotia has increased allowances to widows from \$20 to \$30 per month, and the allowance for children under 16 years of age from \$5 to \$7.50 per month, the maximum monthly payment being raised from \$40 to \$60. Ontario has increased widows' monthly allowances from \$30 to \$40, adding a further bonus payment of \$100, and has also increased the allowance for children from \$7.50 to \$10, to be increased on the mother's

death to \$15 per month. In the same province the maximum death benefits (excluding burial expenses) were fixed at 66  $\frac{2}{3}$  per cent of the average earnings of the deceased workman, instead of at \$60 per month. In Alberta the allowance to widows was raised from \$30 to \$35 per month, the allowance for children continuing at \$7.50 per month, with a maximum, however, of \$65 instead of \$60 per month for the widow and children. Widows' allowances remain at \$30 per month in New Brunswick and Manitoba, and at \$35 in British Columbia, the allowances in respect to children being still \$7.50 in these three provinces. In New Brunswick total monthly payments must not exceed 55% of the average earnings of the deceased workman; in Manitoba the previous limit of \$60 per month for dependents' allowances was removed, while in British Columbia the allowances must not exceed \$65 per month.

The provisions in cases of total disability also have been modified during the past three years. The proportion of former wages allowed in such cases is 66  $\frac{2}{3}$  per cent in Ontario and Manitoba; 62  $\frac{1}{2}$  per cent in British Columbia; 55 per cent in Nova Scotia, New Brunswick and Alberta; and 50 per cent in Quebec on annual earnings under \$1,000, and 25 per cent on earnings between \$1,000 and \$1,500, with a maximum lump sum payment of \$3,000. In partial disability cases the same percentages of the estimated difference in earnings of the injured worker before and after disability. A bill to increase the percentage of difference in earning power which is allowed in compensation, from 55 per cent to 66  $\frac{2}{3}$  per cent is now before the Legislature of Alberta.

*Industrial Diseases.* — Disabilities due to diseases which are incidental to employment in certain occupations are compensable under the laws of all the at 66  $\frac{2}{3}$ % per cent of the average

in the same manner as accident disabilities. These diseases are enumerated in schedules to the various acts, these schedule being originally identical with the list of industrial diseases contained in the British Workmen's Compensation Act of 1906, as follows: anthrax, lead poisoning, mercury poisoning, phosphorus poisoning, arsenic poisoning, and miners' ankylostomiasis. (This aspect of workmen's compensation was considered in an article in the LABOUR GAZETTE for March, 1920, pp. 304-310). Miners' phthisis was added subsequently in Ontario and Alberta, and in Nova Scotia miners' "beat hand", "beat knee" and "beat elbow" were also included, while British Columbia has recently placed miners' sulphur poisoning on the list of compensable diseases.

*Compensation in Yukon Territory.* — A workmen's compensation act was passed by the Yukon Territory in 1917, covering occupations in which at least five workmen are employed. Disabilities under the act must be such as disqualify a workman from earning full wages for a period not less than 14 days; compensation being payable in such cases from the date of disability. Employers may insure against risk but otherwise are individually responsible for compensation. Disputed claims are settled by a judge in the Territorial Court. In cases of death a workman's dependents may receive allowances up to \$2,500, or if he leaves no dependents burial expenses not exceeding \$150 and the cost of medical and nursing are allowed under the act to the persons to whom such expenses are due, the total amount including burial expenses not to exceed \$500. For permanent total disability a worker is entitled to a sum of \$3,000, while permanent partial disability is compensated according to a schedule of injuries. In cases of temporary disability the employer is required to pay to the injured worker 50 per cent of his average earnings, but not beyond the limit of six months.

TABLE SHOWING PROVISIONS OF WORKMEN'S COMPENSATION LAWS IN THE VARIOUS PROVINCES IN 1923.

	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia
1. Death— Funeral.....	\$75.....	\$100.00.....	\$50 (including medical expense).	\$125.....	\$150.....	Maximum per year.	\$100.....	\$100.
Dependents...	Widow, \$30 per month.	\$30.00 per month..		\$40 per month plus lump sum of \$100	\$30 per month.		\$35 per month.	\$35 per month.
	Child, \$7.50 per month each, up to 16 years. Where sole dependents are children to each child \$15 a month until 16 (if boy) or until 18 (if girl).	\$7.50 per month each up to 16 years. Where sole dependents are children to each child \$15 a month until 16 (if boy) or until 18 (if girl).	Minimum total compensation \$1,500. Maximum total wages up to \$1,000 per year and 25 per cent after up to \$1,500 per year.	\$10 per month each up to 16 years. Where children only, \$15 to each.	\$7.50 per month each up to 16 years.		\$7.50 per month up to 16 years. Where children only \$12.50 to each, up to \$40; up to \$30, if a parent, but altogether not exceeding \$85.	\$7.50 per month up to 16 years.
	Maximum, \$60.00.	Maximum benefits 75 per cent of earnings if ceased.	Maximum total compensation \$3,000.	Maximum benefits 66 2/3 per cent of monthly wages.			Maximum \$65.	Maximum \$65.
2. Permanent total disability	55 per cent of wages.	55 per cent of wages.	50 per cent of wages up to \$1,000 per year and 25 per cent after up to \$1,500 per year.	66 2/3 per cent of wages for life.	66 2/3 per cent of wages.	Maximum per year.	55 per cent of wages with minimum of \$10 per week.	62 1/2 per cent of wages.
	Maximum 55 per cent of \$1,200 per year.	Maximum 55 per cent of \$125 per month.	Maximum amount of lump sum, \$3,000.	Minimum, \$12.50 per week.	Minimum \$6.		Maximum earnings reckoned \$2,000 a year.	Maximum earnings reckoned \$2,000 a year.
	Minimum \$5.00 per week.	Minimum \$6 per week.		Maximum earnings reckoned \$2,000 a year.	Maximum earnings reckoned \$2,000 a year.			
3. Permanent partial disability.	55 per cent of difference of earnings before and after accident.	Amount determined by Board.	50 per cent of difference in earnings before and after accident.	66 2/3 per cent difference in earnings before and after accident.	66 2/3 per cent difference in earnings before and after accident.	Maximum per year.	55 per cent of difference before and after accident.	62 1/2 per cent of difference in earnings before and after accident.
	Maximum 55 per cent of \$1,200 annual income.	Maximum \$2,500.						
	Minimum \$5.	Minimum \$1,500 in case of major injuries.					Minimum \$10 per week.	

4. Temporary total disability	55 per cent of wages.	55 per cent of wages.	50 per cent of wages.	65% per cent of wages, payable only so long as disability lasts.	60% per cent of wages.	Maximum \$2,500 per year.	55 per cent of wages.	62½ per cent of wages.
	Minimum \$5.	Minimum \$0.	Minimum \$1.	Minimum per week.	Minimum \$15.		Maximum earnings \$2,000.	Minimum \$5 per week.
5. Temporary partial disability.	55 per cent of difference in earning power before and after accident.	55 per cent of difference in earning power before and after accident.	50 per cent of wages.	60% per cent of difference in earning power before and after accident.	60% per cent of difference in earnings before and after accident.	Not specified.	55 per cent of difference in earning power where present wage is less than 90 per cent of former wage.	62½ per cent of difference in earning power before and after accident.
6. Medical aid.	Full expense for 30 days taken from accident fund.	Full expenses taken from accident fund.	None.	Full expenses taken from accident fund.	Full expenses taken from accident fund.	Not specified.	Full expenses taken from accident fund.	Full expenses taken from medical aid and accident fund.
7. Special medical aid.	Full expense from accident fund.	Full expenses taken from accident fund.	None.	Full expenses taken from accident fund.	Full expenses taken from accident fund.	Not specified.	Full expenses taken from accident fund.	Full expenses taken from medical aid and accident fund.
8. Contribution to accident fund.	Employer.	Employer.	None.	Employer.	Employer.	None.	Employer.	Employer.
9. Contribution to medical aid fund.	Employer.	Employer.	None.	Employer.	Employer from accident fund.	None.	Employee.	Employee and employer.
10. Administration	Board of three.	Board of three.	Circuit and supreme Court.	Board of three.	Board of three.	District Court.	Board of three.	Board of three.
11. Waiting period	7 days—if longer pay from date of disability.	7 days—if longer pay from date of disability.	7 days.	7 days—if longer pay from date of disability.	3 days.	7 days.	3 days; if longer than 10 days, pay from date of accident.	3 days.
12. Insurance.	Compulsory state	Compulsory state	Employer individually responsible.	Compulsory state	Compulsory state	Employer individually responsible.	Compulsory state	Compulsory state.
13. Election by employer.	Any industry not within scope of Act, unless specifically excluded.	Any industry not within scope of Act, unless specifically excluded.	None.	Election only where 6 or less are employed by either employee, unless specifically excluded.	Any industry not within scope of Act.	None.	Any industry not within scope of Act. With approval of 50 per cent of employees, unless specifically excluded.	Any industry not within scope of Act, unless specifically excluded.

MINIMUM WAGES IN ONTARIO AND ALBERTA.

Recent Orders of Ontario Board.

VARIOUS orders of the Minimum Wage Board of Ontario have been outlined in recent issues of the LABOUR GAZETTE (September, 1922, page 990; April, 1922, page 416; March, 1922, page 320; January, 1922, page 71, etc.). Orders Number 13 to 16 govern female employment in textile factories (which include all weaving, knitting, spinning and allied processes) throughout the Province, minimum wage rates being fixed severally for Toronto, for cities of 30,000 population or over (excepting Toronto), for cities and towns having a population from 5,000 to 30,000, and for the remainder of the Province. Orders Number 21 to 24 similarly fix the minimum rates for female employment in the following trades: drugs, chemicals, pharmaceutical or toilet preparations, cereals, teas, dyes, inks, shoe blacking or polish, mucilage, medicines, non-corrosive acids and non-hazardous chemicals or chemical preparations.

The minimum wages in these two groups of industry, varying according to the population of the district in which the industry is followed, are shown in the accompanying table.

These orders as usual provide that in no case shall any employee of 18 years or over be paid less than the rates fixed for inexperienced adults. The number of inexperienced adults or young girls in any establishment must not exceed one-third of the total female working force, and the number of inexperienced adults and young girls together must not exceed one-half of the total female working force. (This rule does not apply to workers employed for less than a month or to plants where four or less employees are engaged).

Piece work rates are to be obtained by averaging the wages for three months, or for the period of employment. The minimum wage rates are applicable to at least 80 per cent of the piece workers employed. Females working less than 36 hours in any week shall be paid on a proportionate hourly basis. Deductions for absence must not exceed the proportionate value of the

ORDERS OF ONTARIO MINIMUM BOARD GOVERNING TEXTILE FACTORIES AND VARIOUS INDUSTRIES.

	Toronto	Cities of 30,000 population (excepting Toronto)	Cities and towns having from 5,000 to 30,000 population	Rest of Ontario

time lost. An employee required to wait on the premises must be paid for the time thus spent. The orders governing the textile industry took effect on August 1, 1922; while the orders governing the miscellaneous group of industries named above became effective on February 1, 1923. These orders are

subject to annual revision by the Board. Recent orders affecting office workers will be outlined in the next issue of the LABOUR GAZETTE.

#### Revision of Minimum Wage Orders in Alberta.

The first six orders issued by the recently appointed Minimum Wage Board of Alberta were given in the March issue of the LABOUR GAZETTE (pages 292-294). Orders No. 1 (governing the manufacturing industries), No. 2 (governing laundries, dyeing and cleaning establishments), and No. 6 (governing shops, stores and mail order houses), were revised and re-issued during March, the original orders being cancelled. An additional order (No. 7) was also issued, to take effect on September 1, defining an experienced female as one who has completed the period of learning in a trade or industry as specified in Orders No. 1 to 6 inclusive, and providing that "no person, firm or corporation shall

employ an experienced female, or suffer or permit an experienced female to be employed in any factory, workroom, laundry, dyeing or cleaning establishment, shop, store or mail order house, at a rate of wages less than \$14 per week."

Order No. 1 in its new form applies to apprentices in millinery, in dress-making, tailoring and fur-sewing, and to learners in all other manufacturing occupations.

The rates of wages during the probationary period remain as before, but thereafter, until September 1, it is permitted to continue employing the workers at a rate not less than \$12, this being the learners' rate in the final period of apprenticeship.

Order No. 2, as revised, also defers until September 1 the application of the full minimum scale of \$14, a weekly rate of \$12 being permitted until that date for workers who have completed their period of learning.

---

### FACTORY INSPECTION IN NOVA SCOTIA IN 1922.

ACCORDING to the report of the provincial factories inspector of Nova Scotia for the year ended September 30, 1922, in addition to the regular inspection of factories in the industrial centres much time was given to the inspection of small factories mostly saw mills, in remote localities off the main lines of travel. Three fatalities and a number of severe accidents occurred in these mills. One fatality occurred in a mill employing six men on a small cut, another in a mill operated by the two owners, and a third in a small portable mill. Comparatively few of the saw mill acci-

dents occurred in the large stationary mills. The safety organizations in the larger industries continued their activities throughout the year and welfare work was carried on in a number of the establishments.

Only ten per cent of the accidents reported in the province were due to machinery. In some cases there was a lack of co-operation between employers and workers reported as regards the use of guards; employers sometimes feeling that they had discharged their duty when they provided the guard, and some employees discarding a guard

for most trivial reasons. A number of cases of eye injuries were reported. There were also several cases of infection, which it is claimed might be eliminated if managers and foremen would insist upon first-aid treatment. Particular mention is made of an accident in a large confectionery establishment where four women suffered from inhaling ammonia fumes which escaped when an employee in the refrigerator plant was draining an oil trap, the valve of which had become blocked by a lump of solder. Because of the fumes they were unable to reach a gas mask which was kept in a case in the engine room. It is recommended that all such traps should be equipped with two valves and that the mask should be kept outside the engine room.

The records for the year show 1,068 accidents of which 9 were fatal, as against 1,326, including 9 fatalities, in the previous year. The decrease was general in almost all the industries except the saw mills where there were 184 accidents, an increase of 20 including three fatalities although the output was considerably less than in the previous year. Machine accidents in saw mills numbered 109. One fatality was due to a mitten catching on the taper of a carriage, one to a falling sheer leg when the guy rope slipped as it was being lowered, and one when a man's foot caught in a saw while he was holding a log to a carriage which was too short to reach the dogs. In the other wood-working industries there were 124 accidents including two fatalities resulting from being struck by shunting cars in the mill yard. There were 15 cases of infection in this group

and 61 accidents connected with machinery. In the metal trades group there were 66 non-fatal accidents, 18 of which were connected with machinery; in the previous year there were 141 accidents. In the car building industry there were 32 and in the steel shipbuilding and repairing industry 17 non-fatal accidents. These last two groups were not active during the year and showed a falling off of 36 and 87 accidents respectively. The steel works industry had the largest number of accidents of any group, there being 418 including four fatalities, as compared with 518 including three fatalities, in the previous year. Machinery was responsible for 47 or 11.2 per cent of these accidents. One fatality was due to the explosion of a turbine machine, one to a fall down stairs, one to being run over by a car, and one to being crushed between the car body and boiler frame of a locomotive. Of the accidents in this group, 182 or 43.5 per cent disabled the injured persons for a period of not less than three weeks. In the bread, confectionery and biscuit group there was an increase of 11 accidents, 37 non-fatal accidents being reported. Eleven occurred in connection with machinery and 5 were caused by inhaling ammonia fumes. Other groups reporting accidents were as follows: textile mills, 14; fertilizer factories, 9; sugar refineries, 21; oil refineries, 28; cold storage plants, 21; clay, stone and plaster works, 5; aerated water factories, 4; evaporators and canneries, 36; printing establishments, 10; and miscellaneous, 28. The majority of the injuries in these latter groups were of a minor nature.

## MINING ACCIDENTS IN ONTARIO IN 1922.

ACCORDING to the report of the Ontario Department of Mines for 1922, 28 accidents causing the death of 30 workmen and 1,398 non-fatal accidents occurred during the year in the mines, metallurgical works, quarries, clay and gravel pits regulated by the Mining Act of Ontario. There were about 11,000 workmen employed as against 9,436 in 1921, 11,486 in 1920, 12,926 in 1919, 15,226 in 1918, and 17,791 in 1917 (the year of greatest employment in the period 1901 to 1922), and the ratio of fatalities per 1,000 employees for these years was 2.72, 2.54, 2.61, 3.00, 2.10 and 2.02 respectively.

Of the 30 fatalities in 1922, 15 occurred underground, 3 at the surface and 12 in quarries. The classification according to industry shows 13 fatalities at gold mines and mills, 6 at gravel pits, 3 at clay pits, 3 at quarries, 2 at silver mines, 2 at nickel mines and 1 at a talc mine. An analysis for the years 1921 and 1922 gives the causes as follows:

	1921	1922
	Per cent	Per cent
Falls of ground.....	33.33	11.11
Shaft accidents.....	16.66	44.44
Explosives.....	16.66	11.11
Miscellaneous underground	25.00	16.66
Surface.....	8.33	16.66

Nineteen of the workmen killed were English speaking and 11 were of foreign nationalities. One-half of the fatalities occurred to men between the ages of 21 and 30 years, 10 being between 26 and 30, and 5 occurred to men between 41 and 45 years.

There were 809 non-fatal accidents underground and 214 at the surface of the mines, 193 at the metallurgical works, and 182 at the quarries, clay and gravel pits. The highest number of accidents at the mines was caused by rock or ore while loading at face or

chute, 175 being reported; drilling machines were responsible for 120, falls of rock or ore from face or wall for 109, tramping for 96, machinery for 48, falls of persons for 36, falling objects for 36, and tools for 34. At the metallurgical works, falls of persons caused 37 accidents, falling objects, 32; being burned by slag or matte, 29; hand tools, 18; acid, steam or gas, 17; flying objects, 15; being crushed between objects, 14; transportation, 13; machinery, 11; strain, 4; stepping on nails, 2; electricity, 1. At the quarries, transportation was responsible for 26; loading material at face, 25; falls of persons, 25; hand tools, 22; machinery, 19; falling objects, 19; sledging, 13; strain while lifting, 8; drilling machines, 6; burns, 5; falls of rock, clay or gravel, 4; explosives, 4; stepping on nails, 4; and electricity, 2. There were 831 non-fatal accidents to English speaking persons and 567 to men, of foreign nationalities of whom 251 were Italians. Included in the non-fatal accidents at mines were 108 eye injuries and 120 cases of infection.

Dr. J. E. Cunningham, Director of the Division of Industrial Hygiene of the Provincial Board of Health, whose advice was asked with regard to the lowering of infection cases, stated that infection arising in cases of broken skin among miners could be largely eliminated. He advised that provision should be made whereby at least ten per cent of all workmen should have training in first aid; that workers should be trained in the importance of reporting for first-aid treatment at once, every time they receive an injury in which the skin is broken; that first aid men should impress on other workers that first aid does not constitute treatment in most cases and should see that the man later reports to a physician for this treatment; that workers

should be cautioned against contaminating the wound unnecessarily by applying dirty cloths to it; that first aid stations should be provided at conspicuous places both in the mill and underground; that first aid material should be kept in water-tight containers and supplies should be available to keep all first aid boxes up to standard equipment; that one cabinet should be located convenient to the active workings in each section of the mine; that in addition to the equipment suggested in The Workmen's Compensation Act there should be supplied a woollen blanket, a water proof blanket, a set of splints and a stretcher; that a man with training in first aid should be responsible for each cabinet that the equipment may be complete and maintained in good order; that all men trained in first aid should be equipped with sealed, sterile first aid packets, preferably in metal cases, and that these should be replaced at once when they have been used for legitimate purposes. Tincture of iodine of five per cent strength was recommended for use where the skin is broken. The surface to be painted should be covered with the iodine once only before applying the dressing and no water should touch the wound before iodine is applied.

Under the direction of Dr. Cunningham, the Board of Health also assisted in an investigation to determine whether miners' phthisis was being produced among hard rock miners in Northern Ontario. The men chosen for examination met three requirements: (1) Had not mined in any other camp than Poreupine; (2) Had worked in Poreupine from six to ten years; (3) Had worked underground during all or the greater part of the time. The results showed positive diagnosis of miners' phthisis in four cases but none of the cases had advanced enough to necessitate absence from work. Arrange-

ments were made for the transfer of these men to work above ground. The following means for prevention of the disease were recommended: (1) That fluoroscopic examination of all men employed by the mine for underground work be conducted at the time of employment, if they have been employed at mining in other camps, and that they be examined with the fluoroscope yearly thereafter. (2) That men who enter employment at mining for the first time be examined by the fluoroscope at the end of five years, and that where the fluoroscope reveals possible dust deposit, the case be further investigated by X-ray plates. (3). That the use of the dry drill be discontinued. (4) That all surfaces be kept constantly wet. (5) That provision be made for through ventilation.

The report states that the provision of fluoroscopic examination is not always practicable; that owing to the efforts of the Mine Inspection Staff the use of dry drills has been discontinued throughout Northern Ontario; and that the large mines are now kept sufficiently wet and have provision for adequate ventilation. Because of the present underground conditions, and the small amount of quartz in the ores, about 12 per cent, the dust hazard is not considered serious at present.

As a result of an enquiry into an accident at the main shaft of the Hollinger mine in October when a number of men were injured owing to an empty car, a loaded steel car and a storage battery locomotive being pushed into the shaft on top of a cage holding twenty men, all mines which have motor haulage have been asked to observe the following precautions: (1) To have controller handles so arranged that they can only be removed in the "off" position. (2) To have shaft entrances protected by gates or guards sufficiently strong to stop a car or motor.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports by the Dominion Bureau of Statistics on (a) The Hat, Cap and Fur Industry, 1920; (b) The Leather Industry, 1921; (c) The Rubber Industry, 1921.

THE Dominion Bureau of Statistics recently issued reports on the hat, cap and fur industry, 1920; the leather industry, 1921; and the rubber industry, 1921. Previous reports in this series relating to various industries for the years 1921 and 1920 were outlined in the issue of the LABOUR GAZETTE for February, 1923, and in previous issues.

### The Hat, Cap and Fur Industry in Canada during 1920.

The hat, cap and fur industry is divided into two sections (a) the hat and cap industry, and (b) the fur goods industry. A total of 355 factories was reported during 1920 of which 230 were hat and cap factories and 125 fur goods factories. The following table shows the number by provinces:

Province	Hats and Caps	Fur Goods	Total
Prince Edward Island.....			
Nova Scotia.....	3	1	4
New Brunswick.....	5	1	6
Quebec.....	83	38	121
Ontario.....	106	67	173
Manitoba.....	21	1	22
Saskatchewan.....	2	6	8
Alberta.....	6	7	13
British Columbia.....	4	4	8
	230	125	355

which \$1,533,128 was in Quebec and \$1,382,424 in Ontario. The cost of material amounted to \$12,915,687 in the hat and cap industry, and \$3,727,003 in the fur goods factories. The total value of production in 1920 was \$28,201,826, divided as follows: hat and cap industry, \$22,688,674; fur goods industry, \$5,513,152.

The number of employees of different classes by sex, and the amount paid in salaries and wages is shown in the following table:

Classes of employment	No. of employees		Salaries and wages
	Male	Female	
<i>Hat and Cap Factories:</i>			\$
Officers, managers, etc.	250	14	797,820
Clerks, salesmen, etc...	358	180	703,452
Wage earners, average number.....	1,788	2,285	3,877,560
Outside piece-workers...	32	49	18,945
Totals.....	2,428	2,528	5,397,777
<i>Fur Goods Factories:</i>			
Officers, managers, etc.	77	1	171,726
Clerks, salesmen, etc...	39	33	75,154
Wage earners, average number.....	369	349	784,631
Outside piece-workers...	12	13	10,038
Totals.....	497	396	1,041,549
Grand Totals.....	2,925	2,924	6,439,326

The total capital invested in the hat and cap factories was \$16,594,962 of which \$9,832,193 was invested in Quebec and \$5,411,604 in Ontario. In the factories manufacturing fur goods, the total capital invested was \$3,346,125, of

A classification of employees according to weekly wage payments, as based upon data covering wages paid 4,923 wage earners for the week of December 15, 1920, or the nearest representative date for the plant reporting, is given on next page.

	Male	Female
<i>Hat and Cap Industry:</i>		
Under \$5.....	30	63
\$ 5 but under \$10.....	134	406
\$10 but under \$15.....	295	719
\$15 but under \$20.....	238	686
\$20 but under \$24.....	212	274
\$24 but under \$30.....	278	106
\$30 and over.....	546	83
Totals.....	1,733	2,337
<i>Fur Goods Industry:</i>		
Under \$5.....	7	18
\$ 5 but under \$10.....	39	79
\$10 but under \$15.....	42	99
\$15 but under \$20.....	44	142
\$20 but under \$24.....	52	51
\$24 but under \$30.....	67	28
\$30 and over.....	179	7
Totals.....	430	423

Variations in the number of persons employed from month to month were not very large; in hat and cap factories the increase or decrease did not reach 10 per cent of the average for the year, and in fur goods factories this percentage is only shown for increase of female employment in the months of September, October, November and December and for male employees for the months of November and December. The average monthly employment for the year was as follows; Hat and cap factories—male 1,788; female, 2,285. Fur goods factories—male, 369; female, 349. Total—male 2,157; female, 2,634.

With regard to the length of time worked, the daily average for all factories was 8.1 hours and the weekly average 46.5 hours. The lowest point in daily hours was in Manitoba with 7.7 hours in fur goods factories and the

highest was found in the hat and cap factories of New Brunswick with an average of 8.6. In weekly hours the minimum was 44 for the one fur goods plant in Manitoba and the maximum 51.4 in the hat and cap factories of New Brunswick. The days worked throughout the year averaged 252.9 of full time and 19.3 of part time. In Ontario fur goods factories the idle time averaged 42.1 days and in Quebec 26.2 days. In hat and cap factories the respective averages for these two provinces were 33.7 and 28.5 days.

#### The Leather Industry, 1921.

The report on the leather industry states that there were 119 tanneries in operation in 1921 as compared with 100 in 1920 and 113 in 1919. Five of these industries were in Nova Scotia, two in New Brunswick, 64 in Quebec, 40 in Ontario, two in Manitoba, four in Alberta and two in British Columbia.

The amount of capital invested in 1921 was \$32,137,488 as compared with \$29,739,987 in 1920, and \$34,623,567 in 1919. The value of production was \$22,905,528 as compared with \$39,967,831 in 1920 and \$45,902,082 in 1919. The report states that while the value of products compared with 1919 showed decreases of 13 per cent and 50 per cent in 1920 and 1921 respectively, the actual output showed an increase of approximately three per cent in 1920 and a decrease of 17 per cent in 1921, so that the decreases in values were due almost entirely to lower prices, and not to reductions in quantities.

The following is a summary of some of the principal statistics of the industry by provinces:

Province	Number of plants	Capital invested	Employees		Cost of materials used	Value of product
			Number	Salaries and wages		
Nova Scotia and New Brunswick.....	7	\$ 289,809	65	\$ 54,742	\$ 170,021	\$ 268,192
Quebec.....	64	4,540,978	967	782,827	1,993,190	3,517,555
Ontario.....	40	27,190,722	3,114	3,160,213	12,926,389	18,900,566
Manitoba, Alberta and British Columbia.....	8	115,979	62	83,280	67,758	219,225
Totals.....	119	32,137,488	4,208	4,081,062	15,157,358	22,905,528

The number of employees of different classes, by sex, and the amounts paid in salaries and wages is shown in the following table:

	No. of employees		Salaries and wages
	Male	Female	
Offices, managers, etc....	184	6)	\$
Clerks, salesmen, etc....	137	53	913,787
Wage earners, 16 years and over.....	3,690	120	3,167,275
Wage earners, under 16 years.....	18	.....	

A classification of employees according to weekly wage payments within specified groups is given below:

Weekly wage	Male	Female	Total employees
Under \$5.....	39	4	43
\$ 5 but under \$10....	150	42	192
\$10 but under \$15....	432	56	488
\$15 but under \$20....	1,342	12	1,354
\$20 but under \$25....	1,011	5	1,016
\$25 but under \$30....	466	1	467
\$30 but under \$35....	161	.....	161
\$35 but under \$40....	68	.....	68
\$40 but under \$45....	27	.....	27
\$45 but under \$50....	7	.....	7
\$50 and over.....	5	.....	5
Totals.....	3,708	120	3,828

There were 18 male employees under 16 years of age of whom 6 received less than \$5 a week and 12 from \$5 to \$10.

With regard to the length of time the establishments in the leather industry were in operation during the year, 104 worked 240 days and over, 8 from 180 to 239 days, 2 from 120 to 179 days, and 5 for less than 120 days.

#### The Rubber Industry in 1921

In the report on the rubber industry in Canada for the year 1921, statistics

are given under two heads (a) the rubber goods industry, and (b) the rubber footwear industry. The number of plants manufacturing rubber goods was 23, of which 18 were in Ontario, four in Quebec, and one in British Columbia, while the rubber footwear plants numbered 12, 6 in Ontario and 6 in Quebec. The selling value of the products of the entire industry for the year was \$39,469,786, with \$25,168,042 in the rubber goods section and \$13,851,744 in the rubber footwear section. The capital invested in rubber goods was \$38,420,786 of which \$36,843,978 was invested in Ontario and \$1,576,808 in the other two provinces. In the rubber footwear section, the capital invested was

	1921	1920

## SETTLEMENT OF DISPUTES AS TO CHANGES IN WAGES ON RAILWAYS IN CANADA.

IN the issue of the LABOUR GAZETTE for July, 1922, and in subsequent issues information was given as to disputes between railway companies in Canada and in the United States in regard to proposed changes in certain wages to take effect in July. A strike occurred in the shops of many railways in the United States on July 1 and continued until September, when settlements were reached on many of the railways, while on others settlements have not yet been reached.

These disputes, in Canada as well as in the United States, it will be remembered, arose out of decisions of the United States Railroad Labour Board. Rates of wages of practically all classes of employees on railways in the United States had been reduced in July, 1921.

Similar reductions were also made in Canada. Toward the end of 1921, however, the railway companies in the United States proposed further decreases in wages and also changes in working conditions. The decisions of the United States Railroad Labour Board in the latter part of 1921 and early part of 1922 made changes in the rules and working conditions, chiefly in modifying certain rules as to hours and rates of pay for overtime work in favour of the railway companies. Three decisions in May and June reduced the rates of wages for maintenance-of-way employees and shop labourers, for shop craft employees, and for clerical and station employees. The railway companies in Canada gave notice of similar reductions in wages, and the employees concerned took strike votes and applied

for Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907.

#### **Maintenance of Way Employees and Shop Labourers.**

The settlement of the dispute as to wages of maintenance-of-way employees and shop labourers on the railways in both Canada and the United States was described in the issue of the *LABOUR GAZETTE* for December, 1922, in which the text of a decision of the United States Railroad Labour Board dealing with the wage rate for these classes in the United States was given with the dissenting opinion of one of the labour representatives on the Board. By this decision rates for sectionmen and labourers were increased two cents per hour and the railways in Canada, through the Railway Association of Canada, agreed to a similar increase. The rate for these classes became 37c per hour from November 1, 1922, as compared with 35c from the middle of July, 1922, to the end of October, 40c from July, 1921, to July, 1922, and 48½c from May, 1920, to July, 1921.

#### **Shop Crafts Employees.**

As a result of the negotiations between the shop crafts employees and the principal railways (the Canadian Pacific Railway, the Canadian National Railways, and the Grand Trunk Railway System), following the report of the Board of Conciliation and Investigation given in the issue of the *LABOUR GAZETTE* for September, page 938, an agreement was reached on December 6 adopting the reduced rates of wages tentatively in force from August 16, being reductions of 7c per hour for the seven principal shop crafts, machinists, etc., (from 77c to 70c), 9c per hour lower for the freight carmen, 7c per hour for apprentices and helpers, and 5c per hour for car cleaners. On December 10 an agreement was reached raising the wages of passenger car cleaners by one cent per hour, making the rate 37c per hour.

The shop crafts employees on certain railways in Canada operated as branches of railways in the United States became parties to proceedings before three Boards of Conciliation and Investigation, the reports of which appeared in the issue of the *LABOUR GAZETTE* for October. In each case the Boards recommended the reductions mentioned above, which became effective on the principal railways in Canada as well as in the United States.

#### **Clerical and Station Employees.**

As a result of the disputes as to decreases in wages (2, 3, 4 and 6c per hour, 204 hours per month) proposed by the railway companies for clerical and station employees, four Boards of Conciliation and Investigation were established.

The report of the Board dealing with the disputes between the Père Marquette Railway and its employees of these classes was printed in the *LABOUR GAZETTE* for October. An agreement between the parties to the dispute to reduce wages as proposed after September 15 and to accept the decisions of the United States Railroad Labour Board for the section of the road in Canada, and to refer disputes as to wages and working conditions to such Board, and to refer any disputes not dealt with by that Board to an impartial tribunal was approved by the Board of Conciliation.

In the dispute between the Grand Trunk Railway System and its clerks and station employees, the two parties agreed to accept the decision of the Board as to rates of pay, the rates prior to July, 1922, to be in effect until November 1. This agreement was printed in the *LABOUR GAZETTE* for October on page 1,085. On December 12, an agreement was reached as to a schedule of wages recommended by the Board after the two parties had failed to reach an agreement on all points. The report of the Board and the schedule of wages were given on pages 16-49 of the *LABOUR GAZETTE* for January. The new scale was effective from November

1, 1922, and the reductions put into effect were reported to be considerably less than those proposed by the railway in July, many adjustments being made by grading rates for certain classes.

In the dispute between the Canadian National Railways and the clerical and station employees, the Board's report was published in the issue of the LABOUR GAZETTE for November at page 1160, a minority report by the member appointed on the recommendation of the railway being printed in the December issue at page 1262. The majority of the Board recommended against any decreases in wages, while the minority report was in favour of a tentative decrease as proposed by the railway company. Negotiations were entered into between the employees and the railway authorities in December, and on February 13 an agreement was reached, a slight reduction being made in the scale

of wages with readjustments as to working conditions for certain classes.

In the dispute between the Canadian Pacific Railway and its clerk and station employees the report of the Board of Conciliation and Investigation was published in the issue of the LABOUR GAZETTE for November, page 1164, no change being recommended by the Board, but in a minority report the member appointed on the recommendation of the railway company recommended that a reduction should be made. On December 13 negotiations between the two parties were resumed and on January 17 an agreement was reached providing for smaller reductions than those proposed by the railway, the new schedules being \$2 to \$10 per month higher than those announced in July, which involved reductions from \$4 to \$12 per month. The revised schedules for the Eastern lines were agreed upon on February 6, and those for the Western lines on March 18.

## WAGES AND HOURS OF LABOUR IN VARIOUS COUNTRIES, 1914-1922

THE International Labour Office of the League of Nations has published in the January issue of its official organ, the *International Labour Review*, an article giving information as to the changes in wages and hours from 1914 to 1922 in various countries.

This study includes not only figures showing the rise and fall in *rates of wages* but by using calculations of changes in the cost of living as well as of changes in rates of wages the changes in the *real wages* are shown, that is, the comparative amounts of goods from time to time which might be purchased with the regular wages prevailing.

It is pointed out in the article that in most countries rates of wages rose from 1914 until 1920 and the cost of living was increasing during this time, in most cases the increase in wages lagging behind the increases in the cost

of living, this, of course, being to the disadvantage of the wage earners. In 1920 it appears both wages and prices began to fall in some countries, the fall in wages lagging behind the fall in prices, this being to the advantage of the wage earners, so far as the relation of cost of living to *rates of wages* was involved. On the other hand it is pointed out that falling prices were accompanied by depression in trade and industry, resulting in much unemployment, so that owing to short time, part time and other forms of unemployment even those who were actually receiving wages were on the average not obtaining the full regular rate per week. Again it is pointed out that during a period of rising prices employment is usually good with much overtime work at rates above the regular rates, so that the wage earner on the average suffers much more during a period of falling prices than a period of rising prices.

The following extracts from the article indicate the chief points brought out in the study.

A satisfactory survey on the lines proposed, particularly with regard to real changes, is rendered extremely difficult owing to the deplorable lack of regular series of comparable data and to the inadequacy in many countries of the index numbers of the cost of living for estimating changes in the purchasing power of money. Furthermore, one of the greatest difficulties in making comparisons of an international character is that which arises from differences in the classification of workers in various industries. Thus, for example, in Germany statistics of wages of metal workers are often classified as for skilled, semi-skilled and unskilled workers, while in Great Britain the work actually engaged upon is specified, e.g. that of fitters, turners, etc. Further difficulties arise from the frequent confusion resulting from the use of the general term "wages" instead of distinguishing clearly between wage rates established by means of agreements between employers and workers, and earnings, which are the amounts received as distinct from the rates at which work is undertaken. If wage rates only are considered, no account is taken of the amount of short time or overtime, while actual earnings include both these factors. Neither wage rates nor earnings, however, make any allowance for total unemployment, and to form conclusions as to the welfare of the workers in any country, it is necessary to examine not only the relationship between wages and the cost of living, but to consider also the amount of unemployment which exists. Thus at the present time many countries are passing through a period of severe unemployment while in other countries employment is particularly good, and it is evidently impossible to establish a true comparison between countries where such differences occur, without taking this factor into consideration.

#### FLUCTUATIONS IN PRICES AND WAGES.

From 1914 until 1920 in all countries, prices and wages rose steadily, but subsequently the uniformity of the movement gave place to a remarkable divergency. Thus during 1921 and the first half of 1922 the countries of the world may be divided into two groups, namely, those in which prices, having reached their maximum in 1920, experienced a continuous fall, and those where prices continued to rise. A few countries, however, occupied an intermediate position, prices fluctuating irregularly without any clearly marked general tendency. Those countries in which prices fell, e.g. many of the former

allied and neutral countries, experienced a general wave of business depression, orders fell off enormously, producers became extremely cautious, industry stagnated, unemployment spread rapidly, and, after an interval, wages followed the movement of prices. By the middle of 1922, however, in a number of these countries a tendency to stabilisation of prices began to appear, and it may be expected that, if this tendency becomes established, the reduction of wages, which still continues, may be arrested after an interval, and more settled conditions prevail.

On the other hand, in a number of countries, generally in Central Europe, for example Germany and Austria, the rise in money wages which operated from 1914 to 1920 has continued to September, 1922, and has even increased in its rapidity since the middle of 1921.

#### TENDENCIES IN PERIOD OF RISING PRICES AND WAGES.

There has been a considerable change in the ratio of the wages of skilled and unskilled manual workers, and the real differences as compared with those which existed in 1914 are now very much smaller... or, in other words, whereas in 1914 skilled workers in the building trades received 50 per cent more (in Germany) than unskilled workers, in 1922 they received only just over 5 per cent more. In countries where the price level has moved to a less extent, the change in ratio was not so marked, but exists nevertheless...

A second relative change very similar in character to the one described above is that professional workers, civil servants and other similar groups have received increases in salary much less proportionately than those in the wages of manual labour. Also, among the professional workers themselves, the increases in the salaries of the higher paid groups or officials have been proportionately less than in the case of the lower paid...

A further example of the general tendency is that in a very large number of countries and industries women have received relatively greater increases than men. The general conclusion that women have received greater proportionate increases than men serves to explain why industries in which large numbers of women are employed show relatively greater wage increases than where male labour largely predominates...

A fourth and final example of the general change in ratio in favour of low as compared with high-paid groups is the tendency for a somewhat greater proportionate increase in the wages of workers in small towns and

provincial districts than in the larger towns and capital cities...

In general, during the war period and post-war industrial boom, money wages were raised either by means of regular increases effected in accordance with changes in the cost of living, or by irregular movements resulting from bargaining between employers and workmen. For a time, however, after the outbreak of war, the machinery of adjustment, which was more or less adequate in peace times, was not suited to the abnormal conditions which arose, and there was a "time lag" between prices and wages which involved a lowering of the real wages of the workers. Even when the mechanism of wage change became adapted to the new conditions, a certain "time lag" still existed, as, if prices continued to rise during the operation of a new wage rate, the money wage received by the workers because of continually diminishing value in terms of commodities, and real wages suffered a steady decline. The "time lag" in the adjustment of wage rates to the increasing cost of living, and the consequent lowering of real wages was greatest in a number of countries in 1917, but in the latter part of the war period and in 1919, partly in consequence of more systematic methods of adjusting wage rates, and partly because of the great demand for labour during the extraordinary industrial boom which operated throughout the world during the two years following the termination of hostilities, an improvement in real wages took place, and in many cases there was an approach to the pre-war level. Extra earnings for overtime

were in many industries important in counterbalancing the real loss occasioned by the "time lag."

In such countries as Germany where prices are still rising, the "time lag" in adjusting money wages continues to operate, although it is considerably reduced by the frequency with which wages are raised, increases being made in many industries each month, or even every fortnight. . .

#### RESULT OF TENDENCIES.

The combined result of the tendencies which have operated during rising and falling prices in those countries where such movements have taken place appears to be that in most industries unskilled workers are now receiving a real wage somewhat higher than before the war. Skilled workers in a number of countries are in approximately the same position as in 1914, while professional workers and officials are distinctly worse off.

In the countries where prices have continued to rise, the level of real wages in relation to that before the war is generally lower for almost all categories of wage earners and salaried staffs than in countries where a fall has been experienced during recent months. In such countries as Germany and Austria practically the only workers whose real wages in September, 1922, were equal to or above those in 1914 were the unskilled workers and those in industries where the demand for labour was exceptionally high, while the official classes had suffered severe reductions.

### THE EMPLOYMENT SITUATION DURING FEBRUARY 1923, AS REPORTED BY EMPLOYERS.

**A**CCORDING to reports tabulated by the Dominion Bureau of Statistics, employment at the close of February showed a further increase, though the additions to staff were much smaller than in January, when considerable reaction from the losses reported during the holiday season in the latter part of December had been registered. The bulk of the expansion occurred in the manufacturing division in which marked improvement was indicated, the gains, however, being largely offset by continued curtailment of operations in the out-of-door industries and also in retail trade.

The accompanying chart illustrates graphically the course of employment as reported by employers of labour since 1921. The curve during the month under review rose rather less steeply than in February of last year, although it was on a level some 8 points higher than at that time.

Statements were received from 6,387 concerns whose pay rolls aggregated 755,823 persons, of whom 743,128 were actually at work on February 28, as compared with a working force of 741,511 at the close of the preceding month. This minor increase caused the index number to rise from 89.5 at the end of

February to 89.9 for the period being surveyed. As mentioned above, manufacturing recorded the greatest revival in activity, over 10,000 persons having been added to the staffs of the firms making returns. The improvement was most noteworthy in iron and steel, textiles, lumber and rubber. On the other hand employment in coal mining, logging, construction, transportation and trade declined considerably; the shrinkage in construction and transportation however was on a much smaller scale than in the last few months.

The situation in all provinces except the prairie district was better than in January. The improvement was most pronounced in Ontario and British Columbia in both of which over 2,000 persons were reinstated by the firms reporting. In the former province the largest gains took place in iron and steel. Renewed activity, though on a very much smaller scale was also indicated in textile, rubber, electrical apparatus, lumber and paper factories. The construction and transportation industries, on the other hand, continued slack and further losses in personnel were indicated in logging and retail stores. In British Columbia there was a percentage increase of 3.7 per cent, the greater part of which was recorded in lumber, iron and steel, logging, water transportation and building construction. Varying conditions were noted in Quebec; the sugar, textile, iron and steel and chemical industries were considerably busier and moderate improvement was also registered on telephones, in railway transportation and construction. These increases, however, were counter-balanced by reductions in the lumber, tobacco, logging, shipping, stevedoring and trade divisions. In the Maritime district renewed activity was indicated in lumber mills, sugar, pulp and paper and iron and steel factories. Coal mining also absorbed a larger number of workers and additions to staff were reported by shipping concerns. In logging, however, considerable contrac-

tions were indicated and railway construction afforded less employment. Over half of the decline of 3 per cent in the Prairie provinces was reported in Alberta coal mines. In addition losses were reported in iron and steel, steam railway operation, construction and trade. That conditions generally were much more favourable at the close of February than in the corresponding month of last year may be seen from the following table of index numbers, which also shows that except in the Prairie district the level of employment was higher than in February 1921.

District	Relative weight	Feb. 28, 1923	Jan. 31, 1923	Feb. 28, 1922	Feb. 28, 1921
Maritime Provinces..	9.1	90.7	90.3	89.7	90.7
Quebec and Ontario..	69.8	89.7	89.1	81.3	87.1
Prairie Provinces.....	13.0	88.9	91.6	84.4	91.0
British Columbia.....	8.1	92.0	88.4	85.3	87.3
Canada.....	100	89.9	89.5	81.9	88.0

An analysis of the returns by cities shows that employment in Montreal, Toronto, Ottawa and Winnipeg declined moderately, while in Hamilton and Vancouver considerable improvement was indicated. Water transportation reported the most pronounced contractions in Montreal, but retail trade, tobacco and glass manufacturing also showed curtailment. The iron and steel industries, on the whole were busier, although a few firms reported fairly large declines: sugar refineries were more fully engaged and improvement of a general character was reported in the textile industries. Statements were received from 772 concerns in Montreal with a total payroll of 98,519 persons as compared with 98,572 employees at the close of January. In Toronto also the most pronounced losses occurred in retail establishments, the declines being partly offset by expansion in iron and steel, rubber, musical instruments and textile factories and on telephones. The working forces of the 884 employers making returns in Toronto aggregated

95,845 persons, while in January they had employed 96,638. According to reports from 135 Ottawa firms employing 11,233 persons (or 126 less than in January) the largest individual declines were reported in stores; the changes in other industries were slight and largely counteracted each other. The iron and steel industries in Hamilton were decidedly more fully engaged and further improvement was also indicated in textile and electrical appliance concerns. In that city, 205 employers recorded a combined payroll of 27,108 workers, as compared with 25,732 in the last report. An aggregate payroll of 25,501 persons was reported by the 390 concerns making returns in Winnipeg; in the preceding month they had employed 25,630 workers. The most important single factor contributing to this reduction was continued shrinkage in retail trade. Rather small increases were reported in iron and steel, printing and publishing and in local transportation, but the textile group remained dull. Building contractors and lumber milling concerns in Vancouver reported the bulk of the expansion in that city. The 257 employers reporting whose working forces comprised 19,962 persons, showed that they had enlarged their staffs by 1,163 workers since the close of January. The index numbers of employment in these cities as compared with January 31, 1923, and with February 28, 1922, are given in the following table:

City	Relative weight	Feb. 28, 1923	Jan. 31, 1923	Feb. 28, 1922
Montreal.....	13.3	85.9	86.2	80.5
Toronto.....	12.9	85.7	88.5	81.9
Ottawa.....	1.5	92.2	95.7	.....
Hamilton.....	3.6	89.2	86.0	.....
Winnipeg.....	3.4	86.4	89.0	82.6
Vancouver.....	2.7	90.4	85.8	91.1

The Manufacturing Industries.

A further revival of activity, though on a somewhat smaller scale than in the preceding month, was indicated during February in the manufacturing division. Statements were tabulated from 4,181 concerns whose payrolls aggregated 434,480 persons as compared with 424,096 in January. There was therefore an increase of 10,384 persons or 2.4 per cent over half of which occurred in Ontario. The index number of employment, standing at 87.5, was again considerably higher than during the same month of 1922 and was also several points above that indicated at the close of February, 1921. The additions to staffs reported in February of last year had been much larger, but they had chiefly represented the re-opening of the railway car shops which had been temporarily closed down at the end of the preceding month. The most important increases during the month under review were those in iron and steel, to

which practically every division of the group contributed. The largest increases, however, were registered in the crude, rolled and forged, vehicle and heating appliance branches. The textile trades continued to show recovery notably in the hosiery, knitting and garment divisions. In addition, the lumber, sugar, rubber, pulp, paper, chemical, electrical apparatus, smelting, lead, tin, zinc and copper industries were considerably busier. Employment in meat-packing and slaughtering establishments, boot, shoe, glass and electric current concerns, on the other hand, declined to some extent.

**ANIMAL PRODUCTS, EDIBLE.** — The trend of employment in this industry was again unfavourable, the losses continuing the series of reductions that have been reported practically without exception since the close of June, 1922. The level of employment for the month under review however was slightly higher than at the same period of last year when contractions had also been indicated. At the close of February meat-packing and slaughtering establishments were decidedly less fully engaged and dairies and fish canneries also reported some curtailment. The heaviest declines were indicated in Ontario, but the tendency in Quebec and the Prairie Provinces was downward also. Statements were received from 158 manufacturers employing 12,213 workers as compared with 12,521 at the close of January, a decrease of 2.5 per cent.

**LEATHER PRODUCTS.**—Activity in boot and shoe factories showed a falling off during February, repeating the movement experienced in the same month of last year. The situation for the period under review coincided very closely with that reported at that time. The concerns reporting, 211 in number, employed 18,620 persons while on January 31 they had an aggregate payroll of 18,775 workers. The greater part of this decline of .8 per cent was reported in Quebec, Ontario and the Prairie Pro-

vinces, the shrinkage in no case being large.

**LUMBER PRODUCTS.** — Further moderate improvement of a seasonal character was indicated in saw mills and carriage factories also registered fairly large increases in personnel. The expansion was fairly general except in Quebec where curtailment was reported. A total working force of 42,539 persons was registered by the 732 manufacturers making returns who had employed 41,576 persons at the close of January. Increases on a rather larger scale had been indicated during February, 1922 and the movement continued upward without interruption until August when the period of seasonal slackness set in and caused considerable losses to be recorded monthly until the close of the year. The situation for the period under review, however, was considerably more favourable than during the same month of last year.

**PLANT PRODUCTS, EDIBLE.** — Employment in this group again increased, according to reports tabulated from 350 manufacturers whose payrolls aggregated 25,080 persons as compared with 24,291 employees on January 31. The largest gains within the industry were recorded in the production of sugar, but starch concerns were busier also. On the other hand, chocolate works were slacker. Practically all the expansion was registered in Quebec and the Maritime Provinces, while elsewhere the changes were slight. Minor increases in activity had been indicated during February, 1922, but the level of employment at that time was slightly lower than for the month being surveyed.

**PULP AND PAPER PRODUCTS.** — The tendency in this industry continued to be upward, the gains being general in all provinces except British Columbia, where an insignificant decline was recorded. Pulp and paper factories were a good deal more fully engaged and some improvement was also reported in the printing trades. Returns were com-

piled from 504 manufacturers with a total working force of 50,707 persons as compared with 50,243 employees at the end of January, the difference representing an expansion of .9 per cent. Practically no change in employment had been shown during February 1922, but conditions at that time were very slightly better than for this February.

**RUBBER PRODUCTS.** — A further revival of activity was indicated by manufacturers of tires, footwear and other rubber goods, generally, mainly in Ontario. An aggregate working force of 11,771 persons was indicated by the 30 firms reporting who had employed 11,054 persons at the close of January. This increase of 6.5 per cent caused the index number of employment in the rubber group to be approximately 10 points higher than in February 1922, when the tendency had been slightly upward also.

**TEXTILE PRODUCTS.** — Further gains were reported by textile manufacturers, particularly in the hosiery and knitting, garment and personal furnishing divisions. Ontario and Quebec reported the bulk of the expansion, the situation in the other provinces showing very little change. Statements were received from 624 concerns employing 73,034 workers as compared 71,747 in the last report, an increase of 1.8 per cent. Increased activity providing work for approximately the same number of workers had been recorded during February, 1922, but the level of employment at that time was lower than for the month being surveyed.

**CHEMICAL AND ALLIED PRODUCTS.** — Paint, drug, medicinal preparation and soap concerns in Quebec and Ontario reported moderate improvement, there having been the addition to staff of 257 persons in the group as a whole. An aggregate payroll of 6,968 persons was reported by the 122 concerns making returns, who had employed 6,711 persons in their last report. This expansion of 3.8 per cent caused the index

number to be several points higher than in the same month of last year, although the tendency at that time had also been favourable.

**CLAY, GLASS AND STONE PRODUCTS.** — Further small contractions were indicated in this group during February, mainly by glass manufacturers in Quebec and by glass, brick and tile concerns in Ontario. Statements were tabulated from 119 employers with a total working force of 8,329 persons, which was 104 workers or 1.2 per cent smaller than at the close of January. The movement at the same period of last year had been upward, but the level of employment in February of this year was higher than at that time.

**ELECTRIC CURRENT.** — Continued curtailment of operations was indicated by producers of electric current, chiefly in Quebec and Ontario. Returns received from 98 manufacturers showed that they had released 132 persons, their staffs aggregating 10,341 persons as compared with 10,473 employees on January 31. In spite of this contraction of 1.3 per cent the index number was above that reported during February 1922, when the tendency had been slightly favourable.

**ELECTRICAL APPARATUS.** — Continued expansion was noted in this group, chiefly in Ontario and Quebec. Reports compiled from 35 manufacturers showed that they employed 7,694 persons in comparison with a combined pay roll of 7,339 in the preceding month. The difference represented an increase of 4.8 per cent. The situation continued to be very much better than during the corresponding month of 1922.

**IRON AND STEEL.** — Further improvement was indicated in the iron and steel industries during February, there being a gain of 4.7 per cent, of which the greater part was registered in Ontario. Employment in the Maritime Provinces, Quebec and British Columbia also increased while in the Prairie Provinces reductions in staff were indicated. All

divisions of the iron and steel industry shared in the expansion, which was most pronounced, however, in the crude, rolled and forged, automobile and heating appliance groups. Seven hundred and twenty-seven employers reported a combined working force of 127,375 persons as compared with 121,704 in the last report. Additions to staff on a much larger scale had been indicated during February, 1922; the re-opening of the railways car shops which had been temporarily closed down at the end of the preceding month had accounted for the substantial gains. The index number of employment for the month under review stood some 14 points higher than at that time.

#### NON-FERROUS METAL PRODUCTS. —

Another increase in employment was reported in this group at the close of February although the additions to staff were not nearly as large as those registered in January. Ontario firms absorbed the majority of the additionally employed workers, while in Quebec and British Columbia there were minor gains. Smelters and refineries were busier and the production of lead, tin, zinc and copper articles also showed an increase. An aggregate working force of 11,416 persons was reported by the 125 employers making returns whose payrolls had totalled 11,046 workers in the preceding month. Improvement had also been indicated during February, 1922, but conditions then were not so good as for the month under review.

MINERAL PRODUCTS. — Employment in this group again increased. The gains occurred largely in oil and petroleum product factories and were generally distributed over the country. Statements were tabulated from 98 concerns with a combined payroll of 8,806 persons as compared with 8,615 at the close of January, the difference representing an expansion of 2.2 per cent. Activity in the group continued to be higher than in the same month of last year.

#### Logging.

During February for the first time since the end of July, the trend of employment in logging was downward, indicating that the period of seasonal slackness had again commenced. With a brief interval of activity during river driving operations it is likely that contractions will continue to be recorded until mid-summer. Statements received from 207 employers showed that since the end of January they had released 2,315 persons from their working forces, which aggregated 32,972 persons for the month under review. The Maritime Provinces, Quebec and Ontario reported practically all of this 6.2 per cent decline; in the Prairie Provinces very little change was noted, while substantial improvement was registered in British Columbia. The decrease in February affected approximately the same number of persons as that reported during the same month of last year, but the index number of employment was some 34 points above that indicated on February 28, 1922, employment during the intervening months having been in much greater volume.

#### Mining.

COAL MINING. — Considerable curtailment of operations was reported by the Alberta coal mines. Moderate improvement was noted in Nova Scotia but the gains were not sufficient to offset the heavy losses recorded in the former fields. Returns were compiled from 95 operators whose payrolls, aggregating 31,026 persons, were smaller by 1,358 workers than in January. In spite of this reduction in employment of 4.2 per cent, the index number stood several points higher than during the same month of last year, when conditions had remained stationary.

METALLIC ORES. — Employment in gold mines in Ontario showed some falling off during February. The tabulations indicated that 196 persons had been released by the 47 concerns making returns in this group. As their working

forces comprised 9,665 persons this represented a shrinkage of 2 per cent. The situation during the corresponding period of 1922, had shown some improvement over the preceding month, but nevertheless it was not so good as for the month being surveyed.

#### Communication.

The number of persons employed in this group increased during February, expansion on telephones much more than offsetting minor declines in the employment afforded on telegraphs. A combined working force of 20,376 persons was reported by the 193 concerns making returns, who had employed 20,182 workers in the preceding month. The greater part of this gain of 1 per cent occurred in Quebec and Ontario. Employment was on practically the same level as during February, 1922, when the tendency had also been favourable.

#### Transportation.

**STREET AND ELECTRIC RAILWAYS.** --- Activity in this group declined moderately. All provinces except the Prairies shared in the contraction, which however, was heaviest in Ontario. Reports were made by 112 concerns employing 18,225 persons as compared with 18,454 on January 31. The trend of employment during February, 1922, had also been downward and the index numbers for the two periods were practically the same.

**STEAM RAILWAYS.** --- Further contractions were indicated by the 129 concerns and divisional superintendents making returns, whose payrolls aggregated 73,325 persons. As they had employed 74,094 workers in the last report there was a decline of 1 per cent. The reductions were general in all provinces except Quebec, but the losses in Ontario exceeded those registered elsewhere. An unfavourable movement had also been indicated during February of last year when the level of employment was

slightly lower than for the month being surveyed.

**SHIPPING AND STEVEDORING.** --- Varying conditions in different parts of the country were noted in this group. In the Maritime Provinces and British Columbia improvement was indicated, but heavier losses in Quebec caused the balance of employment to be unfavourable. Fifty-one employers reported 9,349 persons on their payrolls, that number being 186 less than in their last returns. Substantial increases had been registered during February of last year and the index number then stood some 19 points higher than for the month under review.

#### Construction and Maintenance.

**HIGHWAY CONSTRUCTION.** --- Statements tabulated from 30 firms in this group showed that they employed 1,676 persons as compared with a combined payroll of 2,526 in the preceding report. The greater part of this decline of 33.7 per cent occurred in Ontario. Employment on highways during February, 1922, had shown a moderate increase, but the index number then was decidedly smaller than for the month being surveyed.

**BUILDING CONSTRUCTION.** --- The trend of employment in this industry continued downward, although the losses were very much less extensive than any reported since the end of September. Declines were registered in all provinces except British Columbia where substantial additions to staffs were indicated. The payrolls of the 332 contractors making returns aggregated 12,435 persons. As they had employed 12,800 workers in January, the difference represented a reduction of 2.9 per cent. Contractions had also been recorded during the corresponding month of last year and the index number then was several points lower than at the close of February, 1923.

**RAILROAD CONSTRUCTION AND MAINTENANCE.** — The moderately favourable movement manifested in this industry during January continued to be evidenced in February, when 165 persons were added to the working forces of the 32 concerns and divisional superintendents making returns. Their total payroll stood at 28,805 men as compared with 28,640 in the last report. Additions to staffs in Quebec, Ontario and the Prairie Provinces accounted for this slight expansion, reductions having been registered in the Maritime Provinces and British Columbia. Very much more extensive increases had been indicated during February, 1922, but the volume of employment for the month being surveyed was slightly larger than at that time.

#### Trade.

Continued and severe losses in personnel were reported by retailers during February, while wholesale establishments recorded a slight improvement. Statements were compiled from 711 employers in the trade group with a total sales force of 53,972 persons. As they had employed 56,949 workers at the close of January, there was a decline of 5.2 per cent, the greater part of which occurred in Quebec, Ontario and the Prairie Provinces. The seasonal contractions which had been reported during February of last year also had been rather less pronounced than those noted above, but the index numbers for the two periods were practically identical.

The table on this page gives the index numbers of employment in the various industries as at the end of February, January of this year and February 28, 1922, and 1921. As usual the first column represents the proportion of employees in each industrial group in relation to the total number of workers in all groups for the month under review. (Number of workers employed on January, 17, 1920, equals 100).

Industry	Relative weight	Feb. 28, 1923	Jan. 31, 1923	Feb. 28, 1922	Feb. 28, 1921

## EMPLOYMENT OFFICE REPORTS FOR FEBRUARY AND MARCH, 1923

---

THE following is a brief survey of employment conditions at the end of March, 1923, as noted by the Superintendents of the offices of the Employment Service of Canada.

In the Maritime Provinces the spring demand for farm workers has started, notably at Halifax and New Glasgow. Owing to improved weather conditions, logging and the allied industries were again fairly active, and at New Glasgow a shortage of experienced mill men was reported, due to the fact that local industries were operating with increased staffs. Building and construction had not advanced greatly as yet although prospects were bright for renewed activities in this group. In mining, employment was steady, few vacancies or applications being registered, but an expansion in this industry is anticipated when navigation opens on the St. Lawrence river. All offices reported a scarcity of trained women workers for domestic service, while few positions were available for clerical and business workers.

In the Province of Quebec during March and the first days of April no extraordinary changes in the employment situation were noticed. Latterly there was a small demand for farm workers and it is probable that this demand will increase during the following weeks. Orders for bushmen have ceased but on the opening of the spring drive it is anticipated that numbers of men will be placed. There were reported a few requests for building tradesmen, and carpenters and painters for spring repairs, but spring activities for the erection of new buildings were not yet started. On account of the cold weather railway construction work has been retarded. The depression due to winter slackness was not lessened in the manufacturing industries, and in Montreal especially

all trades are waiting for the opening of navigation. On the whole, however, prospects for the coming summer are very encouraging.

In Ontario the spring demand for farm helpers was well under way, particularly in the southwestern sections, near Toronto and in the Niagara peninsula, and slight difficulty was experienced in securing workers in some localities. There was a growing demand for mechanics in the building trades but this as yet was not large, all localities having a sufficient number of unemployed to meet the requests. While little work had been started on railway maintenance the offices at Fort William, Port Arthur and Sudbury, expect a decided increase in activities during April. A marked slump was noted in the logging industry and many workers were returning to the larger centres to await the opening of the spring drive and the beginning of construction on a large scale. Manufacturing industries showed signs of increased activities especially at Hamilton and Kitchener.

In Manitoba there was a further improvement in employment which was a reflection of the continued demand for farm labour and general bushmen. Conditions in the building group were very unfavourable and all offices reported a number of unemployed skilled mechanics. The demand for general bushmen continued steady but not so heavy as formerly reported.

In Saskatchewan there was a decided improvement in the number of workers placed on farms and this group continued to supply a large part of the business of the offices. The outlook in the building industry was good, but no large orders for workers had been received as yet, while railway construction was retarded owing to bad weather. There

was a small demand for bushmen, though on the whole logging operations were suspended until the spring drive, and in consequence saw mills and allied trades were slack. The demand for housekeepers and domestics for farm work increased slightly.

In Alberta little improvement was noticeable in the labour situation, farming and lumbering absorbing the majority of placements. There was an increase in the number of workers placed on farms in Calgary and Edmonton, although on the whole the demand for farm help was not large. There was a shortage of skilled workers in some localities. A slight advance in the demand for bushmen and saw mill hands was reported at Edmonton.

In British Columbia only a small demand for farm workers was felt. The construction groups remained very inactive and numbers of skilled building mechanics and labourers were unemployed, especially at the larger centres. With the opening of spring construction in building, however, the majority of these should be absorbed. Conditions in the logging and lumber-

ing industries were gradually improving, camps and saw mills were busy. The manufacturing industries were steady, mining quiet, while work along shore was very brisk.

#### Report for February.

During February 1923, the offices of the Employment Service of Canada reported that approximately the same volume of business was effected as during the preceding month, a very slight decline in vacancies and placements being evident during the latter half of the month, while applications for work showed an increase. A glance at the accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, shows that the level of employment reached during January was maintained during February and that compared with the corresponding period a year ago, the curves of applications, vacancies and placements were considerably higher. A summary of the reports from the offices shows that an average of 1,484 and 1,588 applications were registered daily during the first and second half of the month respectively,

as compared with 921 and 960 during the same period of February, 1922. Applications for work during the latter half of January, 1923, averaged 1,650 daily. The average number of vacancies notified to the Service daily was 1,288 during the first half and 1,290 during the latter half of the month. This may be compared with a daily average of 1,273 during the latter half of January, 1923, and with an average of 1,138 and 1,183 during the same period as a year ago. Placements made during the first half of the month averaged 1,156 daily, as compared with 1,159 during the preceding period, and with 797 during the corresponding period of February, 1922. During the latter half of the month the average number of placements daily was 1,136 as compared with 839 during the same period a year ago. The average number of placements in regular employment during the period was 494 and 507 daily, while placements in casual work averaged 662 and 630 daily during the first and second half of the month respectively. The following table presents the placements effected to date by the offices of the Employment Service:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months)....	268,001	37,904	305,905
1920.....	366,547	79,264	445,811
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923 (2 months).....	27,552	29,882	57,434

During the month of February 28,777 persons were referred to positions while a total of 27,510 placements were made. Of these the placements in regular employment numbered 12,013 (9,841 of men and 2,172 of women) and 15,497 in casual work. Vacancies reported by employers to the Service numbered 30,939, of which 23,531 were

for men and 7,408 for women. The number of applications for employment registered at the offices was 36,866, of which 29,243 were of men and 7,623 of women.

Placements in regular employment by provinces were as follows:— Nova Scotia, 283 men, 102 women; New Brunswick, 249 men, 76 women; Quebec, 331 men, 331 women; Ontario, 4,838 men, 716 women; Manitoba, 1,045 men, 326 women; Saskatchewan, 854 men, 221 women; Alberta, 804 men, 241 women; British Columbia, 1,437 men, 159 women.

#### MARITIME PROVINCES.

The construction group showed little activity, the work available being confined mainly to municipal sewer construction and public works. A few painters, carpenters and plasterers, were placed from the offices, while latterly at Halifax, St. John and Moncton, several vacancies were offered for building labourers. Casual employment, shovelling snow on streets and railway tracks, provided many with work. In the logging group all vacancies for bushmen were filled without difficulty. The demand, however, was not great. A few experienced machinists, boiler makers, foundry labourers and mill hands, were required and placed from the offices at Halifax, Amherst, Sydney, Chatham and Moncton.

#### QUEBEC.

Building and construction was not very brisk during the month although a number of vacancies for plasterers and carpenters were received and filled at Quebec, Montreal and Three Rivers. A small demand for bushmen and loggers was reported at Montreal and Hull, and experienced applicants were placed without difficulty. The calls for domestic workers were numerous, although fewer requests for institutional help were received.

## ONTARIO.

The increased demand for farm workers continued throughout February, the requests being registered chiefly at Toronto, Brandon, Guelph and Hamilton. The prolonged winter weather retarded operations in the building groups, but a few vacancies for steel construction workers were reported. Bricklayers and carpenters were registered at Chatham, Windsor and Oshawa while labourers for the erection of transmission lines were placed at North Bay. Municipal public works, such as the construction of sewers and roadways, continued to provide the chief employment in this group while many workers were placed in casual jobs. Section men, construction labourers and track men, were placed at North Bay, Pembroke, Sault Ste. Marie and Toronto. During the early part of the month ice cutting provided temporary employment for a few at Sarnia. In the logging group positions for bushmen, tie makers and camp workers, were still available, but placements were not so numerous. In the manufacturing industries the demand was fairly brisk, machinists, foundry labourers and skilled mechanics for the automobile industry, being required at Windsor, Niagara Falls, Oshawa and Guelph. At Toronto a pronounced shortage of women workers was noted, the demand for cooks, cook-generals, and hotel and institutional help exceeding the supply.

## MANITOBA.

The demand in the agricultural group was firmer and in some localities a slight shortage of experienced workers was evidenced. A further increase in vacancies in this group was anticipated for the coming month. In the construction group the slackness previously reported continued, a few public projects providing work towards the alleviation of unemployment. At Portage la Prairie several men were employed casually cutting and packing ice. Notwithstanding the lateness of the season there was a continued demand for bushmen espe-

cially at the offices at Dauphin and Winnipeg, and a few bushmen and tie makers were sent from the latter office to points in Ontario. There was little change indicated in the demand and supply of women workers, the calls for experienced cooks and housemaids being in excess of the supply, while placements in casual work were made without difficulty.

## SASKATCHEWAN.

Many enquiries for farm help for the spring were received by the offices, and placements in this group showed a marked increase. Slight difficulty was experienced in filling vacancies for experienced stock men at Swift Current. Activities in the building and construction group were very slack, only a few vacancies for labourers and carpenters being reported at Estevan and Moose Jaw. The recent snow storms caused numbers of men to be employed temporarily clearing snow from railroads and the city streets. Section workers and track men were required in small numbers at Moose Jaw, Regina and Saskatoon. In the logging group a few orders remained unfilled as owing to the lateness of the season few workers were willing to go to the woods. From Prince Albert, Regina and Saskatoon, however, a number of loaders, teamsters and tiemakers were placed. At most of the offices there was an increased demand for domestic workers for city and country with a shortage of experienced applicants.

## ALBERTA.

Conditions in the agricultural group showed little change since the previous report, although vacancies for farm workers were received in small numbers. Some provincial and municipal works were in progress employing a number of building labourers near Medicine Hat and Calgary, while vacancies for section workers and track men were registered at Lethbridge. The demand for bushmen was fairly brisk, but comparatively few placements were made in this group.

Little activity was reported in the mining group.

#### BRITISH COLUMBIA.

Few buildings were in process of erection during the month but repair and alteration jobs at Nanaimo and New Westminster gave work to several carpenters and labourers. Provincial government road work near Kelowna, Vancouver, Victoria and Vernon, gave temporary relief to the unemployment situation at these points. Additional requests for bushmen, tie makers and saw mill workers, were received at Cranbrook, Nelson, Kamloops, Prince George and Prince Rupert, and little difficulty was experienced in meeting the demand. There was a shortage of metal miners and quartz machine miners near Prince Rupert and Vancouver, a few workers being transferred to the latter points from Nelson. Work along shore was very active, the offices at Vancouver and Vernon supplying large numbers of longshoremen. An advance in the demand for women resident household workers was evident at Vancouver and Victoria, while placements of casual workers remained in approximately the same volume as previously reported.

#### The Movement of Labour

Reports from the offices of the Employment Service of Canada show that 12,013 placements were made in regular employment during February, 1923, of which 6,584 were of persons for whom the employment secured was outside the immediate locality of the offices at which they were registered. Of these 1,345 were granted the Employment Service reduced rate, 1,113 going to points within the same province as the despatching office and 232 to points in other provinces.

Quebec province issued 59 certificates, 26 of which were to bushmen going to points within the province and 33 to bushmen going from Montreal to camps near Sault Ste. Marie. Ontario offices granted 554 certificates to persons transferred to points within

the province and two to sheet metal workers going to Winnipeg, Man. Of the provincial transfers the majority were bushmen and tiemakers going to camps near Ottawa, North Bay, Sudbury, Cobalt and Fort William. A few were carpenters, bricklayers, stone masons, blacksmiths and construction labourers, going from Ottawa and Pembroke to Port Arthur, North Bay, London, Sault Ste. Marie and other points. From Ottawa one colour varnisher was transferred to Oshawa, one machinist from Ottawa to North Bay, and one farm hand from Toronto to Longwood. The Manitoba offices despatched 281 workers, of whom 96 were going to camps within the province and 185 to other provinces. Of the provincial transfers two were bushmen going north from Dauphin, 76 were farm hands going from Winnipeg to Brandon, Le Pas and Portage la Prairie, while the remainder were waitresses, housekeepers and domestic servants, going to various points in the province. Of the workers going to other provinces 167 bushmen and camp workers were sent to camps near Port Arthur, Ont., eight farm hands and one housekeeper from Winnipeg to Regina, two farm hands to Moose Jaw and six domestic servants to points near Yorkton, Estevan and Saskatoon. Of the 51 reduced rate certificates issued by the Saskatchewan offices 42 were to persons going to points within the province and nine to workers transferred to other provinces. Of the latter two miners were sent to Vancouver, B.C., one farm hand and one store hand to Edmonton and Calgary, Alta., and five bushmen from Saskatoon to Dauphin, Man. The majority of the provincial certificates were issued to farm hands, bushmen and a few domestic workers, going to various points near Prince Albert, Saskatoon and Regina. Alberta offices granted 282 certificates, one of which was to a farm hand from Medicine Hat to Moose Jaw, Saskatchewan. Of the Provincial transfers more than 150 were of bushmen and camp workers going from Calgary, Drumheller

and Edmonton to camps north of Prince Albert, and a few were miners going to points near Drumheller. British Columbia offices despatched two farm hands from Victoria and Vancouver to points near Regina and 114 workers to various points within the province. Of these latter, the majority were bushmen, 22 were miners going from Nelson and Vancouver to Revel-

stoke, and the remainder were teamsters, cooks and waitresses.

Of the 1,345 workers who were granted the Employment Service reduced rate, 870 were carried by the Canadian National-Grand Trunk Railways, 381 by the Canadian Pacific Railway, 92 by the Temiskaming and Northern Ontario Railway and two by the Pacific Great Eastern.

---

### BUILDING PERMITS ISSUED DURING FEBRUARY, 1923.

THE value of the building authorized during February as indicated by reports tabulated by the Dominion Bureau of Statistics, was considerably higher than in the preceding month and also than during February, 1922. The 56 cities making returns issued permits valued at \$4,744,478 as compared with \$3,705,256 in January, 1923, and with \$4,201,955 in February of last year. The increase in the first comparison was \$1,039,222 or 28.0 per cent and in the latter it stood at \$542,523 or 12.9 per cent.

Statements were furnished in some detail by 37 of these cities, showing that they had issued permits for slightly over 400 dwellings valued at \$1,323,430. Permits for buildings other than residences, (including garages, stables, stores, factories, etc.) of which 575 were issued, reached a total of \$3,157,308. In a number of centres no permits were issued during February, building being at a low level on account of seasonal conditions.

An analysis of the returns by provinces shows that New Brunswick, Ontario, Saskatchewan, Alberta and British Columbia reported larger totals of authorized building than in the preceding month, while in the other provinces declines were registered. The greatest actual increase occurred in Ontario; the twenty-five cities making returns in that province recorded an estimated building cost of \$3,275,451,

which was \$660,045 or 25.2 per cent above the value for January. The percentage gains in the Western provinces enumerated above and also in New Brunswick were, however, very much higher than in Ontario, although the actual increases were substantially smaller. The losses in the remaining provinces were on a much smaller scale, that of \$80,360 or 14 per cent in Quebec being the most pronounced.

The value of prospective building in Ontario, Saskatchewan, Alberta and British Columbia was higher than in February, 1922, but in the other provinces less anticipated activity was indicated. The largest actual gain in this comparison was that of \$566,505 or 20.9 per cent in Ontario, while the most decided percentage increase occurred in Saskatchewan, where the permits valued at \$75,820, were 182.1 per cent greater than in the corresponding month of last year.

Of the larger cities, Toronto and Vancouver registered larger totals of authorized building than in January, 1923, and also than in February, 1922. On the other hand, Montreal and Winnipeg recorded declines in both cases. Of the smaller centres Quebec, Fort William, Ottawa, Brandon, Calgary, Point Grey and Victoria showed improvement as compared with the preceding month and with the corresponding month of last year.

The following table shows the value of the building permits issued during the month under review as compared with

January, 1923, and February, 1922. The 35 cities for which records are available since 1910 are marked by asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS.

FAIR WAGE CONTRACTS, MARCH, 1923.

**D**URING March the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to eight fair wage contracts, seven of which were awarded by the Department of Public Works and one by the Department of Railways and Canals. These contracts contain the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour and which otherwise prevents

abuses and secures the legitimate rights of the labour employed.

DEPARTMENT OF PUBLIC WORKS.

Docking, renewals, repairs, painting, etc. at Dredge "P.W.D. No. 117." Name of contractor, The Toronto Dry Dock Co., Limited, Toronto, Ont. Date of contract, February 23, 1923. Amount of contract, \$10,675.

Alterations, etc. to Post Office, — Dominion Land Office and Telegraph Office building, Grande Prairie, Alta. Name of contractor, H. L. Shaver,

Grande Prairie, Alta. Date of contract, February 22, 1923. Amount of contract, \$11,680.

Construction of one complete hopper dump scow of 135 cubic yards to be known and numbered as "P. W. D. No. 311" and complete launching of same in West Arm of Kootenay Lake (near Nelson, B.C.). Name of contractor, D. C. Fraser, Nelson, B.C. Date of contract, March 5, 1923. Amount of contract, \$4,892.

Supply and installation of heating apparatus in Administration Building and heating apparatus in senior naval officers' residence, naval dock yard, Esquimalt, B.C. Name of contractor, William Thacker and Geo. Holt, Victoria, B.C. Date of contract, February 6, 1923. Amount of contract, \$4,052.

Construction of one shed and searchlight platform in naval barracks, Esquimalt, B.C. Name of contractors, E. Williams, S. C. Trerise and J. T. Williams, Victoria, B.C. Date of contract, February 6, 1923. Amount of contract, \$6,480.

Alterations and additions to Post Office fittings, Port Arthur, Ont. Name of contractor, Robert Hamer, Port Arthur, Ont. Date of contract, March 19, 1923. Amount of contract, \$2,706.

Alterations, etc. to buildings 1 to 8, etc. and alterations to parade ground, latrine building, and alterations to Administration Building, naval dock yard, Esquimalt, B.C. Name of contractor, Parfitt Brothers, Limited, Victoria, B.C. Date of contract, March 16, 1923. Amount of contract, \$24,810.

#### DEPARTMENT OF RAILWAYS AND CANALS.

Erection of a highway steel swing bridge over the Chambly Canal near Lock No. 7, Chambly Basin, Que. Name of contractors, Dominion Bridge Company, Limited. Date of contract, March 7, 1923. Amount of contract, \$20,000.

#### POST OFFICE DEPARTMENT.

The following is a statement of payments made in March for supplies ordered by the Post Office Department subject to the Regulation for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of order	Amount of order
Making metal dating stamps and type, and other hand stamps and brass crown seals .....	\$ 664.02
Making and repairing rubber stamps, daters, etc. ....	222.65
Making up and supplying letter carriers' uniforms, etc. ....	6,743.08
Supplying mail bag fittings. ....	4,867.00
Repairing scales. ....	64.00
Making and supplying mail clerks' tin boxes .....	632.50

### RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES.

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of

wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Coal Mining.

**SOUTH EASTERN BRITISH COLUMBIA AND SOUTHERN ALBERTA. — WESTERN CANADA COAL OPERATORS' ASSOCIATION AND DISTRICT 18 OF THE UNITED MINE WORKERS OF AMERICA.** Agreement as already in force extended from March 31, 1923, until March 31, 1924.

The agreement in force from April 1, 1920, to March 31, 1922, lapsed owing to a strike from April 1 to August 28, 1922, the previous agreement being then renewed from September 1, 1922, until March 31, 1923, when the terms were again renewed until March 31, 1924. (The text was given in the *LABOUR GAZETTE* for March, 1923, on page 295). The wages and other working conditions of the original agreement thus renewed were given in the *LABOUR GAZETTE* for September, 1922, on page 955.

### Construction: Buildings and Structures.

**HAMILTON, ONT. — THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, HAMILTON BRANCH, MASONS' AND GENERAL CONTRACTORS' SECTION, AND THE BRICKLAYERS' AND MASONS' UNION No. 1.** Agreement to be in effect from April 1, 1923, until March 31, 1924.

Union to make trade agreements only with the Association. No other agreement to be made in the district. Rates and conditions in this or any other agreement with the Association to be the established standard, no different conditions or rates to be permitted in the district.

Wages per hour to be \$1.00.

Hours per day, eight, five days per week, four hours on Saturdays.

Except in cases of emergency or to suit car or train schedules, no work to be done between 5 p.m. and 8 a.m. from April 1, 1923, to March 31, 1924. Emergency work, time and one-half. The shop steward and employer to determine what constitutes emergency work.

When working two or more shifts, no employer to work more than eight hours in twenty-four. Eight hours' pay for seven hours work on night shift. Day shift, eight hours' pay for eight hours' work.

Members of the Association to employ union members. Union to be composed of journeymen.

No cessation of work pending dispute. Disputes to be referred to the Joint Arbitration Board, and when no settlement is reached an independent umpire to decide.

Double time between noon Saturday and eight a.m., Monday, also certain holidays. Repair work done by owners, by the day, 10 cents extra per hour; this not to apply to city or government work.

Any workman laid off through lack of material or any other cause to receive wages due within four hours of demand, and if discharged to receive wages due upon demand, or waiting time at regular rate.

In firms of more than two members, no more than one member to work with the tools.

**WINNIPEG, MAN. — MASTER PLASTERERS' SECTION, WINNIPEG BUILDERS' EXCHANGE, AND LOCAL No. 334, OPERATIVE PLASTERERS' UNION.** Agreement to be in effect from August 3, 1922, until March 31, 1924.

No stoppage of work to take place over a dispute before matter is brought before the Joint Arbitration Committee and a settlement reached. No settlement to be final until submitted to the union for ratification.

Hours per day, eight, with four on Saturdays, certain days to be observed as legal holidays.

Extra car fare to be allowed for work outside city.

Men hired in the city and sent to jobs out of town to have transportation paid.

Time spent travelling to and from destination to be paid for at regular rate, but not to exceed eight hours in any twenty-four.

A man hired and taking his tools to the job to receive not less than four hours' pay if refused work.

Overtime after 5 p.m., time and one-half; after 8 p.m., Saturday afternoons, Sundays and legal holidays, double time. No work on Labour Day.

When more than one shift is worked, length of shift to be eight hours, where two shifts are worked no more than three hours' overtime to be worked by one man. Where three shifts are worked half an hour to be allowed for meals with no deduction of pay.

Minimum wages per hour from August 3, 1922, to March 31, 1924, \$1.07½. Foremen not less than ten cents per hour over regular rate.

Nothing in this agreement to prevent both parties from getting together to discuss anything that may arise of mutual advantage to the trade.

Notice of any desired change to be given by either party not later than March 31, 1924. Both parties to meet in January, 1924, to formulate a new agreement.

CANADA—EAST OF FORT WILLIAM.—TRADE RULES OF INTERNATIONAL BROTHERHOOD OF STEAM SHOVEL AND DREDGE MEN. In effect from April 1, 1923.

Wages per month—engineers, \$250; cranemen, \$200; firemen, \$150. To equalize the heavier duties on machines without cranemen, a longer working day is hereby conceded to standard crew machines.

For revolving shovels, dragline, ditchers and excavating machines without cranemen, eight hours or fraction thereof to constitute a day's work, and the calendar working days or nights a month. For overtime, ninth hour to be *pro rata*; thereafter time and one-half.

For railroad type and large revolving shovels, dragline and excavating machines employing cranemen, nine hours or fraction thereof to constitute a day, tenth hour to be *pro rata*.

Where the parties agree to work the *pro rata* hour monthly, board may be provided free instead of addition to above rates. Time and one-half for repairs on Sundays and holidays, and double time for moving machines or digging on Sundays and holidays.

Transportation to be furnished, and return, unless job lasts for more than one month.

Six days' notice of leaving a job to be given; men to notify district or local office to arrange that union men can fill vacancies.

Any member violating these rules to be subject to a fine on a majority vote being cast by the District Executive Board.

#### Manufacturing: Printing and Publishing

VICTORIA, B.C.—TIMES PRINTING AND PUBLISHING COMPANY, LIMITED, AND THE INTERNATIONAL TYPOGRAPHICAL UNION, No. 201. Agreement to be in effect from January 1, 1923, to December 31, 1923, and thereafter until terminated by two months' notice in writing.

Only union mechanics and workmen to be employed. Employers to respect and observe union by-laws and scale.

Hours, on morning and evening newspapers, seven and one-half.

Foremen of morning and evening papers to receive not less than 75 cents per day over journeymen's scale. Head machinist to receive not less than fifty cents per day over scale, and no overtime. Assistant foremen and head ad. men, and machinist operators (linotype or monotype) to receive not less than 50 cents per day over scale for journeymen.

Certain provisions concerning "reproduction of matter."

Hours of labour, morning newspapers, between 6 p.m. and 6 a.m.; day work, on evening or morning papers, between 7 a.m. and 5 p.m.

Wages: day work, 90 cents per hour or \$6.75 per day of seven and one-half hours; night work, 98 cents per hour, or \$7.35 per night of seven and one-half hours. Overtime, time and one-half. Apprentices not to be called upon to work overtime if a journeyman is available. Work on Labour Day, Christmas Day and Sundays, double time; other holidays time and one-half; provided men on newspapers may work a five-hour day for a full day's pay on the holidays stated as price and one-half. Nothing in the scale is to prevent superior workmen receiving a higher rate of wages. Employees called back after one hour to receive \$1.00 for call-back.

Apprentices: each newspaper employing five or less members shall be entitled to one apprentice; when employing eight or more regulars, two apprentices. Newspapers may start a third apprentice when the senior apprentice begins his last six months on the monotype or linotype.

Wages per week: night scale from first six months of third year, \$17.60, increasing by \$2.00 per week every six months to \$27.60 for second six months of fifth year. Day scale, 1st six months of third year, \$16.20 per week, increasing by \$2.00 per week to reach \$26.20 per week for second six months of fifth year.

Provision for apprentices to complete certain courses of lessons within specified times, by means of which it shall be decided by an examining board whether the apprentice is entitled to the increase in wages.

No apprentice to work more hours per day nor more hours per week than provided for journeymen.

An apprentice upon entering an office must pass an examination. During the first year he must be allowed to learn the

case and to set type. During the second, third and fourth years he must be employed on composition and display work for a specified number of hours, and must be allowed to work six months on make-up and six months on type-setting machines during the fifth year.

Machine Tuition: Beginners on linotype or other type-setting machines to be active members of the union and to receive the following rates: (No beginner to work more than six days nor average less than four days per week, and but one apprentice for each five machines or less.) 1st four weeks 30 per cent of scale, with an extra 10 per cent each week until sixth four weeks, when 80 per cent of scale shall be paid.

Proofreaders shall be union members. Where members of Mailers' Union are not engaged the correcting and proving of mailing lists to be done by journeymen members of the Typographical Union or by apprentices.

#### Transportation and Public Utilities:

ALBERTA. — ALBERTA GOVERNMENT TELEPHONES AND EMPLOYEES, CLERICAL, OPERATORS AND OUTSIDE FORCES. Wage schedule and working conditions.

I. *Clerical Workers*: In effect from January 1, 1920, and from year to year unless notice of intention to change is given before November 30.

Wages, per month (minimum and maximum).

Female—Apprentice, \$55-\$75; regular, \$75-\$90. The scale for stenographers and certain supervising clerks may be further increased to a maximum of \$100 per month.

Male—Messengers, \$45-\$55; juniors, \$60-\$90; regular, \$100-\$130.

Increments: female, semi-annual, \$5.00 per month; male, semi-annual, \$5 per month, except where a junior is becoming a regular, when increment shall be \$10. An employee's salary not to be

automatically increased on account of length of service only.

On and after January 1, 1923, salaries of all clerical employees, up to and including chief clerks, to be decreased by \$5 per month, salary increments to be governed by the terms of the revised schedule herein.

Apprentice to mean any employee whose experience prior to entering the service will preclude him or her from drawing the minimum salary of the regular class.

No new employee to be engaged unless eighteen years of age, having a high school or equivalent training and being a British subject.

Messenger boys may be engaged at the age of 16 years, but shall not be classed as juniors until they are 18 years of age. Every new employee must serve a probationary period of from one month to three.

Each employee is entitled to certain holidays with pay, together with other holidays as authorized by the general superintendent.

Each employee is entitled to three weeks' vacation with pay for each consecutive year's service. Vacations can only be granted at the completion of a full year's service. Extra time will not be allowed for listed holidays falling within the period of vacation.

Certain provisions made for sick leave.

Pay to be deducted for all time lost except through holidays, sick leave or having to appear before Pensions Board.

Certain deductions to be made for tardiness.

II. *Exchange, Rural and Long Distance Work*: Regulations and schedule of wages in force from January 1, 1923, to March 1, 1924, and thereafter from year to year unless notice be given before February 1.

Hours of work: Eight hours a day on exchange, rural and long distance

work. In service demanding shift work, any eight hours, except one hour intermission for meals, to constitute a day's work, inclusive of Saturday afternoons. Overtime including Sundays, Saturday afternoons and holidays, where the 44 hour week is in force, time and one-half; from 10 p.m. to 8 a.m., double time. Overtime must be authorized by the foreman.

Monthly employees to be allowed two weeks' vacation with pay each year, after one full year's employment; hourly employees, one week.

Special provision made for transportation, and for board and lodging.

Foreman: An employee having charge of more than three journeymen switchmen, journeymen linemen, or apprentices, or more than twelve labourers.

Sub-foreman: An employee having charge of three or less than three journeymen switchmen, or journeymen linemen or apprentices, or less than twelve labourers, or an employee assigned to assist a foreman in work affected by this schedule. A journeyman switchman having charge of 1,000 lines or over to be a sub-foreman.

Apprenticeship: Four years' training period for inside work, three years for outside work. Any part of apprenticeship may be waived on account of experience obtained elsewhere.

Seniority to start from date employee last entered the service. Nothing in schedule to be construed to reduce pay of an employee now getting a higher rate for work classified in the wage schedule. No discrimination against employees on account of affiliation or relations they may, or may not have, will be permitted.

Departments will receive complaints from any employee or committee of employees at any time.

Wage schedule: Per month; foreman, \$175; foreman, rural and long distance, \$165; wire chiefs, \$155 and \$175; dis-

triet plant inspectors, \$145; switchboard men (travelling) and combination men, \$145. Sub-foreman, rural and long distance, per day, \$6.10. Per hour: exchange sub-foreman, chief installer, 82 cents; cable splicer, 83 cents; troublemen, switchboard men, switchmen (automatic), linemen (exchange), repairmen, 77 cents; installers, rackmen, 72 cents. Linemen (rural and long distance), \$5.60 per day. Floating gang; per day and board and lodging; foreman, \$5.10; sub-foreman, \$4.40; linemen, \$4.00; groundmen, \$2.50; switchboardmen or linemen transferring to combination work, \$122 per month for the first year.

Apprentice rates, for men employed previous to January 1, 1922: Plant inspectors and combination men, from \$67 per month for first six months to \$122 per month for third year; linemen (rural and long distance), from \$2.65 per day for first six months to \$4.40 per day for third year; linemen (floating gang), from \$1.75 per day for the first six months to \$3.50 per day for third year; cable plicers, troublemen, switchboardmen, switchmen, linemen, repairmen, installers, rackmen, 35½ cents per hour for first six months to 67½ cents per hour for third year.

Apprentice rates, new schedule: Plant inspectors and combination men, per month, from \$57 for first six months to \$112 for sixth six months; linemen (rural and long distance), per day, from \$3.15 for first six months to \$4.90 for sixth six months; linemen (floating gang), per day, from \$1.65 for first six months to \$3.40 for sixth six months; cable splicers, per hour, 28½ cents for first six months to 75½ cents in fourth year; troublemen, switchboardmen, switchmen, repairmen, linemen, installers, rackmen, per hour, from 28½ cents for first six months to 68½ cents (reached in sixth six months by troublemen and linemen and in fourth year by others).

Higher salaries will be paid when warranted by ability or quality of service rendered.

In addition there is a circular giving in full the provisions for sick leave terms and allowances.

III. *Operators*: Schedule effective February 1, 1923, to January 31, 1924, and from year to year unless notice is given by December 31.

An experienced operator will be engaged on one month's probation at a rate agreed to by the District Traffic Chief. If kept on rate will be fixed by schedule. In filling vacancies or making promotions, merit and ability to be first considered, then seniority, the former being equal.

After one year's service, operators to be entitled to two weeks' vacation with pay. Vacations due for one service year must be taken before the expiration of the following year, or will be forfeited. Senior operators to be given preference in fixing dates for vacations.

Overtime, regular working days, straight time; legal Dominion holidays and Sundays, time and one-half.

Hours per day for chief operators, agent-chief operators, supervisors, operating-room clerks, messengers and operators, seven; night operators from 22k to 8k.

Agent-chief operators and chief operators not required to work a regular trick at the switchboard not to receive overtime, but to be expected to relieve in cases of emergency. If working a regular trick they will be paid for overtime.

Night operators who can sleep the greater part of the night to be paid the regular schedule rate of day operators.

Overtime rate, about ½ cent per hour for each dollar per month of monthly wage. Minimum overtime rate 26 cents, maximum, 47 cents per hour.

A bar may be placed by District Traffic Chief against the further increases of an operator if it is evident she has reached her maximum efficiency or for other reasons.

Wages per month: City exchanges: supervisors, 1st year, \$90, thereafter, \$95; operators, 1st year, \$55 and \$60; 2nd year, \$65 and \$70; 3rd year, \$72.50; 4th year, \$77.50; 5th year, \$82.50; thereafter, \$85; night operators (Calgary and Edmonton), regular and relief, working the all-night trick, \$2.50 per

month above day rate. Regular or relief night operators for full week periods, one night off with pay each week. Town exchanges, from \$52.50 for first six months to \$80 for sixth year; Village exchanges, from \$52.50 for first six months to \$75 for sixth year.

Special provisions for sick leave.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1923

**T**HE movement in prices as indicated by the index number of wholesale prices and the family budget in terms of retail prices continued slightly upward.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.79 at the beginning of March as compared with \$10.53 for February; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); and \$7.68 for March, 1914. The total for food, fuel, and rent averaged \$21.47 at the beginning of March as compared with \$21.23 for February; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the peak); and \$14.35 for March, 1914. • In foods, the only important decline was in eggs, though bacon and evaporated apples were also slightly lower. The greatest increase was in butter which accounted for 15c of the 24c advance in foods. Nearly all the other items, however, were higher also, the most important being sugar, cheese, meats, and bread. Fuel and rent were practically unchanged.

In wholesale prices the Departmental index number stood at 225.7 for March as compared with 224.3 in February; 225.6 in March, 1922; 263.1 in March, 1921; 356.6 in May, 1920 (the peak); and 137.0 in March, 1914. With the exception of dairy produce and fish which advanced, farm products and

miscellaneous foods were lower. The advance in dairy products, in spite of a substantial seasonal decline in eggs, was due entirely to a sharp increase in the price of butter. All other groups except house furnishings and chemicals were higher. Compared with a year ago grains and fodder, animals and meats, fish, fruits and vegetables, house furnishings, chemicals and sundries were lower. All the other groups were higher. The most important declines during the month were in hides, jutes, eggs, rye, hay, straw, beef, hogs, bacon, fowl, lemons, oatmeal and honey. The principal advances occurred in butter, granulated sugar, raw cotton, raw silk, pig iron, galvanized iron, tin plates, antimony, copper, lead, smelter, tin, bar silver, and gasoline, with smaller increases in oats, sheep, dressed lamb, tea, flaxseed, molasses, nails, copper wire, and white lead.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices for the several commodities in relation to the average prices for the base period, 1890-1899, these being, therefore, made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

A special index number (comprising fifty of the more important commodities selected from the 271 in the Departmental list) including 'twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced to 156.2 in March as compared with 155.2 in February; 153.1 in January; 148.1 in March, 1922; 174.3 in March, 1921; 241.0 in March, 1920; and 101.9 in March, 1914. The increase was due mostly to advances in sheep, butter, sugar, raw cotton, metals, and gasoline.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, which includes thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, stood at 153 in February as compared with 149 in January; 147 in December, 1922; and 144 in January, 1922. Goods produced, goods exported, raw materials, producers' goods, and consumers' goods advanced, while goods imported were slightly lower.

The Canadian Bank of Commerce index numbers of both imports and exports advanced, the former from 165.11 in February to 172.69 in March, and the latter from 150.70 in February to 154.24 in March. The combined index of imports and exports advanced from 157.90 to 163.46.

Professor Michell's revised index number of wholesale prices in Canada from 1919 to date based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, advanced to 179.2 in March as compared with 176.3 for February; and 161.0 for March, 1922. Foods were slightly lower while manufacturers' goods advanced.

The table of retail prices and rentals shows the prices at the beginning of March of seventy-two staple food-stuffs, groceries, coal, wood and

coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favour-

ably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family

of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Retail Prices.

Beef continued to advance, sirloin steak being up in the average from 27.3c per pound in February to 27.5c in March. The advance was general in all provinces except New Brunswick and Saskatchewan which averaged slightly lower. Round steak also was slightly higher at 22.5c per pound. Rib roast, shoulder roast, mutton and veal, averaged slightly higher. Fresh pork, roast, was practically unchanged at 26.5c per pound, declines in some localities being offset by advances in others. Mess pork advanced from 25.3c per pound in the average to 25.7c. Bacon declined from 40.6c per pound to 40.3c. Boiled ham was down slightly in the average to 59.8c per pound. In fresh fish, cod advanced slightly, while halibut and white fish were lower. Salt herrings were practically unchanged but salt cod advanced. Lard was steady.

Eggs continued to decline, fresh averaging 53.3c per dozen in March as compared with 55.3c in February and 63.3c in January. The decline was general in nearly all localities. Cooking eggs averaged 41.9c per dozen in March, as compared with 43.2c in Feb-

ruary, and 46.6c in January. Milk was practically unchanged being slightly higher at Owen Sound and lower at Brantford, Winnipeg, Brandon and Moose Jaw. Butter showed a general advance, dairy from 41.2c per pound in February to 45.8c in March and creamery from 47.2c in February to 53.5c in March. Cheese averaged 34.3c per pound in March as compared with 32.8c in February.

Bread was slightly higher in the average at 6.8c per pound, advances occurring at St. Hyacinthe and Lethbridge. Flour averaged slightly lower at 4.4c per pound, most localities showing little change. Rolled oats was steady. Rice and tapioca were practically unchanged. Canned vegetables also showed little change. Potatoes advanced slightly in the average from \$1.20 per 90 pound bag to \$1.23. Cooking apples advanced to 28c per gallon while evaporated apples declined from 21.7c per pound to 21c. Prunes, raisins, and currants were steady. Canned peaches were up 1½c per can to 32.6c. Marmalade was slightly lower at 81.2c per four pound tin. Sugar showed a general advance, granulated rising from 9.8c per pound to 11.4c and yellow from 9.3c per pound to 10.8c. Coffee was steady, while tea averaged higher at 62c per pound. Vinegar was up from 15.1c per quart to 15.5c. Cream of tartar advanced from 70.6c per pound to 71.5c.

Anthracite coal averaged \$18.88 per ton in March as compared with \$18.71 in February and \$18.42 in January. Advances occurred in Charlottetown, St. Catharines, Hamilton, London, and Belleville. The average price of bituminous coal was unchanged at \$11.94 per ton, but in some localities prices advanced while in others they receded. Hard wood averaged slightly lower at \$12.76 per cord, declines occurring in Hull and St. Catharines. Soft wood also was slightly lower at \$9.50 per cord. Coal oil advanced from 31.2c per gallon to 31.4c.

In rent no changes were reported.

#### Wholesale Prices

GRAINS AND FODDER.—Wheat No. 1 Manitoba Northern, advanced from \$1.11 per bushel at the beginning of March to \$1.14 toward the end. Western barley at Winnipeg rose from 55c per bushel the first week in March to 56c by the end of the month. Western oats advanced from 48c per bushel to 51c. Ontario oats at Toronto also were slightly higher at 51c per bushel. Flaxseed which was quoted at \$2.35 per bushel toward the end of February advanced to \$2.51 by the end of March. Rye at Toronto declined from 86c per bushel to 81c. Hay at Montreal was \$1 per ton cheaper at \$14; and straw at Toronto 50c lower at \$9 per ton. Bran and shorts were steady.

ANIMALS AND MEATS.—Western cattle at Winnipeg which were quoted at \$5.75 per hundred pounds the last week in February advanced to \$6.25 per hundred pounds the last week in March. Butcher steers at Toronto declined from \$6.75 per hundred pounds to \$6.50. Beef, hindquarters, declined from 17c per pound to 16.5c. Hogs fell from \$9.75 per hundred pounds to \$9.50. Bacon advanced 1c per pound to 27c. Sheep at Toronto which were quoted at \$7 per hundred pounds toward the end of February advanced to \$8.50 the first week in March and then declined to \$8. Dressed lamb rose from 28c per pound to 32c.

DAIRY PRODUCTS.—Creamery butter at Montreal, which had advanced from 42c at the beginning of February to 53c at the beginning of March, declined to 48c toward the end of March. Creamery butter at Toronto showed about the same changes as at Montreal, declining from 56c per pound at the beginning of March to 54c toward the end. Dairy butter remained steady at 46c per pound. Fresh eggs at Montreal were quoted at 37c per dozen at the end of March as compared with 48c at the be-

ginning, 50c at the beginning of February and 80c at the beginning of January. Milk was steady.

**FISH.**—Business in dried and pickled fish was reported to be very dull with \$5 per quintal to exporters the prevailing price for cod. The markets of Cuba, South America, and Europe were said to be congested so that little improvement was expected. The demand for canned lobsters was reported to be poor. Fresh halibut advanced 1c per pound to 14c on the Atlantic Coast.

**FRUITS AND VEGETABLES.**—Apples No. 1 Spies, advanced from \$7.50 per barrel to \$8. Lemons were down \$1 per box at \$5. Potatoes at Toronto declined 10c per 90 pound bag to \$1. Canned corn was up from \$1.27 per dozen tins to \$1.32. Canned peas were up 5c per dozen tins to \$1.57.

**MISCELLANEOUS FOODS.**—Oatmeal declined from \$4.25 per 98 pound bag to \$4. Flour was steady. Tea showed an advance of about 5 per cent. Granulated sugar at Toronto advanced from \$10.39 per hundred pounds to \$10.64. Barbados molasses was up 3c per gallon to 83c. Honey was slightly lower at 11.5c per pound.

**TEXTILES.**—Raw cotton advanced from 28.20c per pound to 31.05c at New York. Some lines of manufactured cottons advanced from 2c to 3c per pound. Raw silk at New York was up from \$8.70 per pound to \$9.10. Jutes and hessians were slightly lower, the former at 9.78c per pound and the latter at 12.62c per yard. Flax and linen rope were steady.

**HIDES, LEATHER, BOOTS, AND SHOES.**—Hides, steers' and cows', declined from 10c per pound to 8c and calfskins from 13c per pound to 11c. Horsehides were up from \$1.75-\$2.75 each to \$3-\$4.

**METALS AND IMPLEMENTS.**—Pig iron advanced from \$35.90 per ton to \$37.90. Bar iron was up from \$3.50 per hundred pounds to \$3.75. Black sheets and

galvanized sheets both advanced, the former from \$4.90 per hundred pounds to \$5.25 and the latter from \$6.45 per hundred pounds to \$6.55. Wrought iron, waste material, was up \$1 per ton to \$15. Ingot metals showed a general advance, antimony from 8¾ per pound to 9c, copper from 17½c per pound to 20c, lead from 7¾c per pound to 8¼c, spelter from 9½c per pound to 10½c, and tin from 42½c per pound to 53c. Quicksilver rose from \$70 per seventy-five pound flask to \$72. Bar silver at New York advanced from 63⅞c per ounce to 67⅞c. Solder was 7c per pound higher at 34c. Soldering coppers were up from 38c per pound to 40c.

**FUEL AND LIGHTING.**—Connellsville coke at the ovens declined from \$7.50 per ton to \$7.25. Gasoline at Toronto advanced 2c per gallon to 29c.

**BUILDING MATERIALS.**—Birch lumber rose from \$50 per M to \$55. Hard maple was also \$5 per M higher at \$55 per M. Rough lumber at Victoria advanced from \$19 per M to \$23 and flooring from \$60 per M to \$65. Shingles declined slightly to \$3.75 per M. Cement was steady. Coal tar was down 25c per barrel to \$9. Cut nails advanced from \$4.60 per keg to \$4.85. Sash cord was 4c per pound higher at 68c. Copper wire rose from 17⅞c per pound to 19⅜c. White lead in oil advanced 50c per hundred pounds to \$14.70. Linseed oil was up from \$1.10 per gallon to \$1.13. Benzine was 2c per gallon higher at 28c. Paris green was up from 34c per pound to 46c.

**HOUSE FURNISHINGS.**—Sad irons declined from \$1.90 per set to \$1.75.

**DRUGS AND CHEMICALS.**—Caustic soda was ½c per pound lower at 4½c.

**MISCELLANEOUS.**—Groundwood pulp was slightly easier at \$40-\$45 per ton. Rope advanced 2c per pound to 22c. Raw rubber at New York was slightly lower at 29c per pound. Laundry starch was down from 7½c per pound to 7¼c.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES.

---

**T**HE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain.

**WHOLESALE PRICES.**—The Board of Trade index number showed an increase for February above the January level of 0.5 points or 0.3 per cent. Foods fell 2.4 per cent and industrial materials rose 1.8 per cent. Cereals were cheaper by 2.1 per cent and meat and fish by 5.6 per cent. Iron and steel were dearer by 4.8 per cent, other metals and minerals (which include coal) dearer by 2.7 per cent, cotton by 1.5 per cent and other textiles by 0.7 per cent.

The *Statist* index number, in continuation of Sauerbeck's figures, showed a continued advance in February of 1.3 per cent on the January level. Materials showed an increase of 1.3 per cent and foodstuffs of 1.1 per cent. The general index number was the highest recorded since July, 1922.

**COST OF LIVING.**—The index number of the family budget compiled by the Ministry of Labour was 176 at March 1, a decrease of one point from the February level. Foods dropped 2 points and the other groups all showed no change. At March 31 the index number had dropped 2 points further, to 174. Foods were at 168, or 3 points lower. Fuel and light were down to 185. Rent, clothing and sundries showed no change for the month.

### Austria

**COST OF LIVING.**—The index number of cost of living compiled by the Paritätische Kommission, influenced by the political situation in Europe, rose both in January and February, but did not reach the level of November, 1922. On the base, July, 1914=1, the index numbers of the different items of the budget were as follows in January, 1923: foods, 10717; clothing, 14821; rent, 166; heat and light, 14180; all, 9454; and in February, 1923: food, 10784; clothing, 15092; rent, 346; heat and light, 14527; all 9601. During the month, therefore, the only large increase was one of 108 per cent in house rent, and the increase in the total budget was 2 per cent.

### Bulgaria

**RETAIL PRICES.**—The official index number of retail prices of 47 articles (foods, with some items for fuel, soap and tobacco), 1901-1910=100, was 3596.7 in December, an increase of 2.9 per cent on the November level.

### France

**WHOLESALE PRICES.**—The index number of *Statistique Générale* (1901-10=100) was 487.6 at the end of February, a striking increase—9 per cent above the level of one month previous. Foodstuffs increased 9.5 per cent—vegetable foods rising in price 3 per cent, animal foods 8 per cent and sugar, coffee and cocoa, 23.5 per cent. Industrial materials increased in price 8.6 per cent—minerals and metals 15 per cent; textiles, 3.6 per cent and the miscellaneous group, 8.7 per cent. The index number for March was 490.2 an increase of only 0.5 per cent, and thus a much slighter change than for several months. Information by groups is not yet available.

**Germany**

**WHOLESALE PRICES.**—The official index number of the Federal Statistical Office showed that after the sharp rise in wholesale prices in January and the early part of February prices began to be influenced by the rise in the mark which had set in at January 31, and on February 15 quite noticeable decreases had taken place in all groups and in the total index. These declines were repeated at February 25 in four of the seven groups, increases being shown in the fats, sugar, meat and fish group, the metals and petroleum group and in coal and iron.

The index was as follows for the monthly averages of December and January and the tri-monthly periods of February:

**WHOLESALE PRICES IN GERMANY (1913=1).**

	18 foods	22 industrial materials	All commodities
December, 1922.....	1161.4	2060.7	1474.8
January, 1923.....	2389.9	3522.9	2784.8
February 5, 1923...	4902.5	7957.7	5967.2
February 15, 1923...	4121.5	7755.5	5387.9
February 25, 1923...	3933.3	7731.9	5257.1

**COST OF LIVING.**—The official cost of living index number (food, rent, heat,

light and clothing), according to the Federal Statistical Office was 2643 for the February average (1913-14=1) as compared with 1120 in January, an increase of 136 per cent. Without clothing, the index rose 132.9 per cent. Foods rose 133 per cent and clothing 147.6 per cent. The rapid increase in prices continued until the middle of February, when a slackening was noticeable and, in the case of certain foods, even a decline in prices.

**Italy**

**WHOLESALE PRICES.**—The base of the index number compiled by the Chamber of Commerce and Industry of Milan has been shifted from the average of May-December, 1921, to the average of the year 1913. It is considered that when calculated as percentages of pre-war prices the index number will be of greater interest in itself and that it will be of more international interest owing to the fact that price index numbers of other countries frequently have the pre-war year for base period. The index number is given by groups on the new base at intervals in the accompanying table. The lowest level of the general average during the period was reached in July, 1921, when the index number was 466.06, and the peak up to date was reached in November, 1922, when the index was 558.22.

\*For South Africa, Australia and New Zealand base is taken as 1000 instead of 100. *a*. Average for year *b*. Quarter beginning in specified month. *c*. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. *d*. New index number is joined to old index number (38 commodities) and all converted to base 1913=100. For the years 1920 and 1921, 76 quotations are included, and from January, 1922, 100 quotations. *e*. The commodities in these two index numbers are in the one case, articles chiefly exported, in the other case, articles chiefly imported. *f*. First of month. *g*. Middle of month. *h*. End of month. *j*. Monthly average. *k*. New Göteborgs Handels och Sjöfartstidning.

**Sweden**

The official index number of wholesale prices constructed by the Commerce Department was described in the LABOUR GAZETTE for September, 1922, and the figures given by groups to March, 1922. The figures have since been revised involving slight changes. The index number for 1922 and the beginning of 1923 by months is as follows:

WHOLESALE PRICES IN SWEDEN—RESPECTIVE MONTHS, 1913=100.

Date	Raw materials	Manufactured goods	All commodities
1922—January.....	162	198	181
February.....	160	196	179
March.....	158	194	177
April.....	154	194	175
May.....	153	194	175
June.....	153	192	174
July.....	153	190	173
August.....	155	189	173
September.....	152	186	170
October.....	150	184	169
November.....	150	174	163
December.....	151	173	163
1923—January.....	150	173	163
February.....	155	173	165

Since the autumn of 1922 the Swedish krona has recovered its former gold value, and prices of raw materials have begun to rise, reflecting a recovery in certain industries.

**India**

**COST OF LIVING.**—The official index number of cost of living at Bombay, compiled by the Bombay Labour Office fell one point in February to 155 on the base July, 1914=100. The general index was 20 per cent below the peak of October, 1920, and nearly down to the

level of August, 1918. Food articles fell one point, to 150, and clothing declined two points to 223. Fuel and lighting, and house rent showed no change.

**Spain**

**WHOLESALE PRICES.**—The official index number of the Institute of Geography and Statistics—prices in 1913=100—for all commodities, fell 2 points to 170 in January. The partial index number for foods fell 4 points to 169 and that for industrial materials showed no change, remaining at 171.

**RETAIL PRICES.**—The index number of retail prices at Madrid, 1914=100, showed an increase in January of 3 points over the December level, thus standing at 180. Animal foods were 199, vegetable foods 154, and the fuel and miscellaneous group 187.

**United States**

**WHOLESALE PRICES.**—The index number calculated by the Federal Reserve Board rose one point during February. Goods produced showed on the whole no change during the month although goods exported increased in price 3.9 per cent. Goods imported increased in price 5 per cent. Raw materials showed no change from the previous month; producers' goods increased 6 points and consumers' goods decreased 2 points.

The index number of the Bureau of Labour Statistics also rose one point during February. Metals and metal products rose 4½ per cent owing to price increases in iron and steel, copper, lead, and tin. Building materials, cloths and clothing, chemicals and drugs and miscellaneous commodities, farm products and fuel and lighting showed slight declines, the last owing to con-

tinued decreases in bituminous coal and coke. Foodstuffs and house furnishing goods showed no change.

The *Annalist* index number of wholesale prices of a food budget of 25 foods decreased at the beginning of the year to 184.463 at January 20, and 181.855 at February 17, rising again to 184.108 at March 17 and to 187.185 at April 7.

Wholesale prices according to *Bradstreet's* index number showed on the whole a very slight downward trend at April 1, reaching the level \$13.9304, or only two one-hundredths of one per cent below the March 1 level. Five groups, the chief being metals, rose, and eight groups, the highest being textiles and the food products groups fell slightly.

*Gibson's* average index number of wholesale prices of twenty-two articles of food rose 4.7 per cent for March, to the level of 75.3. After this very sharp rise, the level reached is higher than any since March, 1921.

**COST OF LIVING.**—The retail food index of the Bureau of Labour Statistics showed a decrease of 1 per cent in February as compared with January. Seventeen articles decreased in price during the month, the largest decreases being strictly fresh eggs, 17 per cent, and pork chops and butter, 2 per cent. Fifteen articles increased in price, the

chief increases being: cabbage, 18 per cent, storage eggs, 6 per cent, granulated sugar, 5 per cent, navy beans and onions, 4 per cent, hens, 3 per cent. The increase for the year from February 15, 1922, was four-tenths of one per cent.

The relative cost of living index figures of the Special Commission on the Necessaries of Life, for Massachusetts, showed an increase in February of 0.9 per cent over January. Foods increased 1½ per cent and clothing 2 per cent. Fuel and light showed a slight decline owing to reductions in the gas and electric rates in some communities, but fuel and light was comparatively higher than any other item in the budget. The shelter and sundries indexes showed no change during the month.

The National Industrial Conference Board cost of living index number on the base July, 1914=100 rose from 158 in November, 1922, to 159 in December, and declined again to 158 for January and February. The food index (from the Bureau of Labour Statistics' figures) was 147 in December, 144 in January, and 142 in February. The clothing index was 156 in December, 160 in January and 162 in February. Shelter, fuel and light, and sundries showed no change for the period, shelter standing at 167, fuel and light at 187 and sundries at 171.

## RECENT LEGAL DECISIONS AFFECTING LABOUR.

---

**T**HE two legal decisions which are summarized below relate respectively to a claim for a mechanic's lien made by a mine worker in Alberta, and to a case respecting Workmen's Com-

pensation in Quebec. On another page of this issue there is given the text of a judgment recently delivered by Mr. Justice Galt at Winnipeg respecting the legal status of a trade union.

Alberta mine worker may file claim of lien for wages within sixty days from time he ceases work.

A workman who had been employed in the development of a coal mine in Alberta brought an action against the registered owner of the coal mining rights there, for the enforcement of a mechanics' lien. The evidence shows that the plaintiff had worked for the first ten days of March, 1922, and then left off, resuming in April and finally ceasing to work on May 5. On March 30 the owner had posted a notice that she would not be responsible for any further work or improvement done on the premises. The claim of lien was filed on May 16.

The point at issue in the action was as to whether the claim of lien was filed in time. Section 13 of the Mechanics' Lien Act is in part as follows:

Every lien upon such building, erection, mine works or improvements or land, shall absolutely cease to exist after the expiration of thirty-five days, except in the case of a claim for wages owing for work in, at or about a mine, in which case the lien shall cease after the expiration of sixty days after the claimant has ceased from any cause to work thereon, or place or furnish the materials therefor....

The defendant owner claimed that the sixty days allowed for filing a claim of lien should date from the last day for which wages could be claimed,

in which event the claim was filed too late. The counsel for the plaintiff on the other hand held that the claim was filed in time inasmuch as it was filed within sixty days after the plaintiff had ceased to work on the mine, namely May 5, or alternatively within sixty days after the notice of non responsibility was given by the owner, although not within sixty days after that portion of the work was done, which was done before the giving of the notice.

The opinion of the trial judge was in part as follows: "I think that the ceasing to work mentioned in section 13 refers to work in respect of which the lien is claimed.... in my opinion the period of time covered by the plaintiff's work subject to the posting of the defendant's notice cannot be taken into account in determining the date within which the plaintiff's lien should have been filed." He therefore found in favour of the defendant.

The workman appealed against this decision and the case was heard in the appellate division of the Supreme Court of Alberta.

In the judgment of the Supreme Court the contention of the plaintiff's counsel was set forth as follows:

It is submitted in the first place, that the words "has ceased from any cause to work" should be construed in their plain, ordinary and grammatical sense, and that when so construed these words include any work done on the premises on which the lien is claimed, quite regardless of the question whether such work is work in respect of which the workman is entitled to claim a lien on the property. If the words "has ceased from any cause to work" are construed in their plain ordinary meaning as including any sort of work, whether or not the claimant is entitled to claim a lien in respect thereto, then the time for filing the lien commences to run from the date on which the claimant in this action did his last work on the premises in question and not from the date on which the owner posted his notice.

The view was upheld by the Court which declared in its judgment:

It seems to me that the reason given by the learned judge is not sufficient to lead the

Court to interpret the words under consideration otherwise than according to their ordinary grammatical meaning, namely, "sixty days after the claimant has ceased to work thereon," that is, on the mine—doing work of such a character as entitles him to a lien.... Whether it be favourable or unfavourable to the owner, affords no sufficient reason for inserting words in the Act with the effect of changing the ordinary and grammatical sense of an enactment which as it stands is not at all an unreasonable provision.

The appeal was therefore allowed with costs for the plaintiff, and a lien was declared against the interest of the defendant to the amount due in respect of the work done by the plaintiff prior to March 11, 1922.

(*Alberta.—Sutherland vs. Davison.*)

#### **Moving picture theatres do not fall within scope of Quebec Workmen's Compensation Act.**

A youth employed in a moving picture theatre at Montreal died from the result of injuries caused by falling from a ladder. His mother, who was a widow, brought an action against his employer under the Quebec Workmen's Compensation Act, claiming the sum of \$3,050. The mother alleged that her son was her principal support, that when he was repairing an electric sign attached to the theatre the ladder slipped and he fell, dying a few hours later; that at the time of his death he was earning \$15 a week, and that in accordance with the Workmen's Compensation Act he was entitled to the sum of \$3,050. She also claimed that her son was an employee in "a building industry and in an industrial undertaking.... in which a machine is used moved by a force other than that of men or animals."

The employer denied certain allegations of the plaintiff claiming that her son was earning only \$10 a week and that he was not the principal support of his mother. He claimed further that the theatre of which he was the owner was operated as an amusement and recreation moving picture show and as such he was not subject to and did not come under the regulations of the Workmen's Compensation Act.

It was held by the Court that the industry was not one having to do with the transportation of materials having the effect of changing their nature or giving them new properties but that it only gave an illusion of reality for which a price was charged, but it was an operation of exchange which is the characteristic of a commercial enterprise. An opinion was quoted that a

theatre in which the use of machinery requires the employment of numerous people, entails the handling of heavy scenery and the execution of many complicated movements, constitutes a genuine workshop, but it was pointed out that the present case was different as the machine was moved by a small motor and there was nothing complicated in its operation. The judgment of

the Court, therefore, was that the theatrical enterprise of the defendant was not an industry within the scope of the law of Workmen's Compensation. For these reasons the defence was sustained, and the action was dismissed with costs.

(Quebec. — *Lesperence vs. United Amusement, Limited.*)

# THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.

DEPUTY MINISTER—F. A. ACLAND.

Volume 23

MAY, 1923

Number 5

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

**I**N addition to the regular monthly articles, this issue of the LABOUR GAZETTE contains a summary of trade union membership in Canada during 1922, a survey of trade unionism throughout the world, an account of measures that are being adopted in Canada for the training of apprentices in the building trades, quarterly articles on immigration and fatal industrial accidents, and a summary of mining accidents and means adopted for their prevention in various countries.

### Monthly summary

There was an active demand for farm labour during April in Quebec, Ontario and the Prairie Provinces. Conditions in the building and construction industries showed improvement except in the Maritime Provinces and Manitoba. There was an active demand for river drivers in the Maritime Provinces and Ontario, and a slightly increased demand for loggers in British Columbia. The manufacturing group showed slight gains in employment, especially in the metal trades and textiles. At the beginning of April the percentage of unemployment among members of the trade unions was 6.8 as compared with 6.4 at the beginning of March and with 9.6 at the beginning of April, 1922. The industrial situation at the end of March as reflected in reports from employers

showed a great reduction in employment, especially in logging and in the manufacturing industries. The commencement of spring out-of-door operations caused moderate improvement, but the general tendency in all districts except British Columbia was downward. Reports from the offices of the Employment Service of Canada show a reduction in the volume of business during March as compared with the reports of February, while, compared with March, 1922, a slightly higher level of employment was maintained.

The average cost of a weekly family budget of 29 staple foods was \$10.64 at the beginning of April as compared with \$10.79 in March, \$10.26 in April, 1922, \$12.68 in April, 1921, \$16.92 in June, 1920 (the highest point reached) and \$7.51 in April, 1914.

The time loss due to industrial disputes during April was less than in the previous month and also less than in April, 1922. Twenty disputes began or were in progress during the month, involving 2,173 employees and a time loss estimated at 32,303 working days. Corresponding figures for the previous month were 16 disputes involving 1,459 employees with a time loss of 34,075 working days, and for April, 1922, 26 disputes involving 13,086 employees with a time loss of 272,946 working days. At the end of April, 15

disputes, involving 1,214 employees were in progress.

**Proceedings under the Industrial Disputes Investigation Act.** One report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, was received by the Department in April. Three applications for the establishment of Boards were received and three Boards were established during the month.

**Dominion-Provincial conference to be held in September** As mentioned in the March issue of the LABOUR GAZETTE on page 263, correspondence was exchanged during the winter between the Prime Minister of Canada and the Premiers of the different provinces with reference to the holding of a Dominion-Provincial conference for the purpose of considering matters which had been the subject of recommendation on the part of the International Labour Conference of the League of Nations. It had been tentatively arranged through this correspondence to hold such conference early in the summer, but as the attention of the Government of Ontario during June would be largely occupied with the approaching general election, the various Provinces were invited by the Dominion Government to express their view as to the desirability, under the circumstances, of continuing to prepare for the convening of the conference in June or deferring it until later. The majority of the Provinces indicated their preference for a postponement of the conference until the month of September and arrangements will be made accordingly. The agenda of the conference and other details will be arranged by the Minister of Labour.

**Fifth session  
International  
Labour  
Conference**

Reference was made in the April issue of the LABOUR GAZETTE to the agenda proposed for the fifth session of the International Labour Conference to convene at Geneva on October 18, 1923. Subsequent consideration of this subject at a meeting of the Governing Body held in Geneva on April 10 resulted in a decision to confine the October 1923 conference to a consideration of subjects of factory inspection and safety. The subjects referred to in the agenda originally proposed for the October meeting will be dealt with instead at the sixth session of the annual conference which will be held in June, 1924. It was decided by the Governing Body that the subject of night work in bakeries should be added to the agenda for the sixth annual conference.

**Tribute to  
International  
Labour  
Organization**

On his return to Chili, Mr. Edwards, President of the Third Assembly of the League of Nations, received an enthusiastic welcome from the most important workers' organizations in the country. *El Mercurio* states that at one of the meetings held to celebrate his return Mr. Edwards strongly recommended that Chili should send a complete delegation to the next session of the International Labour Conference. He also declared that the International Labour Office, created by the Peace Treaty of Versailles, is an essential guarantee for the protection of workers throughout the world. The Organization substitutes for barren and irresponsible propaganda, carried on by agitators with no constructive policy, the useful and responsible efforts of men who are filled with confidence in the task which has been entrusted to them and who realize fully the obligations incumbent upon those who are working for the realization of great reforms.

**Judgment of  
Ontario Court  
respecting  
combines**

An important judgment was delivered on April 18 in the First Divisional Court of Ontario, in which section 498 of the Criminal Code prohibiting combinations in restraint of trade was declared *ultra vires* of the Dominion Parliament. The case arose from an action brought by the Attorney General of Ontario against the Canadian Wholesale Grocers' Association and a number of individuals, asking for a declaration that their organization offended against the section of the criminal code which prohibits combinations in restraint of trade and seeking an injunction to restrain them from operating in that manner. The action was dismissed by Hon. Mr. Justice Orde in the High Court Division, and this judgment was sustained on appeal.

It was claimed by the Attorney General that this Association had committed acts which constituted infractions of section 498 of the Criminal Code and were also in violation of the Common Law, as to restraint of trade. Counsel for the Association contended that the matters dealt with were all matters as to which the provincial legislatures had exclusive legislative authority.

In delivering the judgment of the Appeal Court, Chief Justice Sir William Meredith stated that the finding in the first place was that the Trade sections of the criminal code were beyond the authority of the Dominion Parliament. Referring to a decision of the Judicial Committee of the Privy Council *in re* the Board of Commerce, he said that as he read the judgment, there was no escape from the conclusion that it was not competent for the Parliament of Canada to enact laws to prohibit undue combination and hoarding so as to restrict the liberty of the inhabitants of a province. While the

other Judges of the Court concurred in the judgment, their reasons for so doing were not in every case identical. The judgment of the Privy Council which declared the jurisdiction conferred on the Board of Commerce to be *ultra vires* was set forth in the LABOUR GAZETTE for December, 1921, on page 1508-1510.

In order to remedy this situation as to the province of Ontario, a bill was introduced at the recent session of the provincial legislature with the object of enabling the Attorney General of the province to bring an action in the Supreme Court of Ontario against persons making agreements in restraint of Trade, and empowering the Court to declare such agreements unlawful and void. The bill, however, had not passed its final stage at the close of the session.

**Policy of  
Ontario  
Workmen's  
Compensation  
Board**

According to an official statement in the Ontario Legislature, the Workmen's Compensation Board does not refuse to allow workmen who are injured to retain solicitors to appear on their behalf before the Board. In order, however, to avoid unnecessary expense and delay the Board always endeavours to deal with claimants directly without the intervention of agents of any kind, the usual procedure being by way of inquiry and investigation rather than by formal hearing at trial. During the year 1921 the Board refunded to employers who had a good accident experience during the preceding year the sum of \$385,996, and collected from employers with a bad accident experience in 1920 the sum of \$198,189. The amount refunded in 1920 to employers under "merit rating" in respect to 1919, was \$164,750, and the amount collected from those having a bad record was \$212,810. The total amount of the Pension fund held by the Board on October 1, 1922, including proportion of accruing interest, was \$9,688,737.

**Pilots'****committees and  
superannuation**

Pilotage bylaws for the Pilotage District of Sydney, N.S., were issued on April 7, 1923, on the recommendation of the Minister of Marine and Fisheries, under authority of the Canada Shipping Act. These bylaws govern, among other matters relating to pilotage, the issue of certificates to masters and mates of ships registered in Canada, including rules for examination of candidates, etc., and the superannuation of pilots. Pilots incapacitated after at least five years' service receive annual payments for life of such sum as the Superannuation Fund in each year will allow. This fund forms part of the revenue collected under the bylaws, its amount being determined by the Minister after consultation with the Pilots' Committee. This committee consists of three members elected annually by the pilots of the district to act on their behalf in all business with the Department. The amount of the pension is limited to \$20 for each year of service, up to \$800. The widow of a pilot is entitled, except on remarriage, to half the amount which would have been paid to her husband, and children under 16 years are entitled to a sum up to \$25 annually whether the widow remarries or not. Any retiring pilot who has contributed to the fund, and who is unmarried or a widower without dependent children, may elect to receive a lump sum to be determined by the Minister, in commutation of his pension. Pilots, who have served less than five years, receive back on retiring, the monies they have contributed to the fund. Similar bylaws are in force in the district of Halifax, N.S., and St. John, N.B. Pilots' committees also function at Montreal and Quebec, but the bylaws of these Districts make no provision for the payment of retirement pensions. The Pilotage District of British Columbia, established under orders of 1876 and 1919, was disestablished by an order issued in April, 1920.

**School****requirements  
of workmen's  
families**

The Ontario Government, according to a statement in the provincial Legislature in April, had under consideration the question of making special financial provision for needy suburban school sections in the vicinity of Toronto, Hamilton and Ottawa. The Chief Inspector of Public and Separate Schools had reported that the unsatisfactory financial conditions in these districts were due to the large number of workmen's homes with large families, the ratio of children to population being higher than elsewhere, with a lower average of wealth per head. The Minister of Education suggested, as possible means of relief, incorporation with a neighbouring city, or the invoking of those sections of the Ontario Public Schools Act of 1920 which provide that township councils may apportion among the various school sections in the township the principal and interest of the investments held for school purposes according to the salaries paid to teachers engaged by the respective boards, or according to the average attendance of pupils; and enabling municipal councils to make special grants for aiding new or weak schools, supplementing teachers' salaries or retiring allowances and for other purposes.

**Alberta and  
British school  
teachers**

The Alberta Department of Education lately stated, for the information of British school teachers, that the local supply of teachers was now equal to the demand. Teachers had been scarce since 1907, and at that time British teachers were granted standing in the Province on condition that they had completed a two years' course of training, and were told they would experience no serious difficulty in securing appointments. Graduation from British training schools, or certification by the British Board of Education, together with recommendations from the Board of Education at Whitehall, was re-

quired of the immigrants. The Provincial Department guaranteed no salaries, but issued information as to conditions in Alberta. Fourteen teachers arrived in 1921, eighteen in 1922, and eight during the present year up to March 20. During the past three years the Provincial Government has made loans to Normal School students, and the attendance at these schools has steadily increased.

#### **Nova Scotia miners' pension proposals**

A delegation representing about six thousand Nova Scotia coal miners submitted to the Provincial Cabinet on April 13, a plan for old age pensions of \$40 a month or \$480 per year for miners over 65 years of age who have worked in a mine in the Province for at least 20 years. They suggested that a pension fund be created, to be administered by a board of three members, to which fund the 15,000 miners of the Province would contribute 15 cents per week each, the Government and the operators each supplementing these payments by equal amounts. It was suggested that the fund be allowed to accumulate for one year, at the end of which period it was estimated that there would be about 600 pensioners, drawing \$288,000 per year. Premier Armstrong promised that actuaries would be engaged to investigate the proposals.

#### **Lieutenant- Governor of Ontario entertains Organized Labour**

An occasion unique in the history of organized labour was the luncheon tendered to representative labour men of the province by His Honour Henry Cockshutt, Lieutenant-Governor of Ontario, at Government House on May 5. The invited guests, who numbered about 150, were received by the Lieutenant-Governor and Mrs. Cockshutt. Following the reception a group photograph was taken of those in attendance. At the

conclusion of the luncheon the Lieutenant-Governor, who acted as toastmaster, proposed the toast to the King. The speeches in reply to the toast of "Canada" were made by Mr. Tom Moore, president of the Trades and Labour Congress, and Senator G. D. Robertson, vice-president of the Order of Railroad Telegraphers. The "Province of Ontario" was replied to by the Hon. Walter Rollo and the Hon. H. Mills, ministers respectively of labour and mines in the Ontario Cabinet. Controller Joseph Gibbons, who spoke to the toast of "Toronto", proposed a toast to the health of Lieutenant-Governor Cockshutt and Mrs. Cockshutt, which was received with enthusiasm. The singing of the National Anthem concluded the proceedings.

#### **Convention of Governmental Labour Officials of United States and Canada**

The tenth annual convention of the Association of Governmental Labour Officials of the United States and Canada was held at Richmond, Va., May 1-4. At the opening session representatives of the different states and provinces presented reports on new legislation during the year and the remainder of the session was devoted to a discussion of matters affecting women and children in industry. At this session an address was given by Mr. H. G. Fester of the Ontario Minimum Wage Board on "The Advantages of the Conference Method in the administration of Minimum Wage Laws". During the evening an address was given by Dr. John B. Andrews, Secretary of the American Association for Labour Legislation on "Progress in American Labour Legislation", and by Dr. Royal Meeker, Commissioner, Department of Labour and Industry, Pennsylvania, on "The International Labour Situation". The second day was devoted to questions affecting inspection and safety, and during the afternoon delegates to the convention through the courtesy of the Hon. John Hopkins Hall, Jr., Commissioner of

Labour for the State of Virginia, visited a number of typical southern industries. The evening of the second day was devoted to a discussion of child labour problems, and the third session dealt with the subject of workmen's compensation and industrial rehabilitation. In the final session of the convention held on May 4 the subjects of employment and mediation and arbitration were discussed. Mr. H. C. Hudson, general superintendent of Ontario Employment Offices presided over the session devoted to employment and explained the work of the Ontario offices of the Employment Service of Canada. At the session devoted to mediation and arbitration Mr. Francis Giddens, Secretary of the Department of Labour of Canada, gave an address on the Industrial Disputes Investigation Act. The Hon. John Hopkins Hall, Jr., was elected president of the association and Miss Louise E. Schutz, Superintendent, Division of Women and Children of the Industrial Commission of Minnesota, was re-elected secretary-treasurer. Mr. H. C. Hudson, the only Canadian officer of the Association, was re-elected a vice-president of the association. Chicago was selected as the place of meeting next year.

#### **Workers' Education in England**

An educational experiment is being conducted by the National Alliance of Employers and Employed in Great Britain, in several large industrial centres. Elementary economics and industrial history constitute the first course and are taken by all. An hour's lecture is given, followed by an hour of questions and discussion, during which the students bring in the problems of their own factories and workshops for study. The studies are conducted as far as possible under the auspices of the London School of Economics and Political Science, and the lectures are given by university professors. Wherever possible, courses in English and European history, English, logic, elocution and public speaking

are added to the first year primary or required subjects. The scheme was started in Birmingham in 1921 with but few students, and at the end of the summer term of 1922 there were 832 students enrolled at Birmingham, Newcastle, Nottingham, Liverpool, Cardiff, Swansea and several other cities. It is stated that 470 students have entered for the coming year in the Birmingham area alone. The alliance course has been officially accepted as a qualifying course to advanced study in the university, and many students have taken up a three year tutorial course there. At Nottingham the students spend two full days per week at the university, the employers paying full wages to those taking the courses.

Students who show ability are offered special training as student lecturers and study circle leaders. Four of these circles were conducted at Birmingham in 1922 under such students, who are drawn from the workers, and in most cases hold important positions in their trade unions. Sixteen circles are being formed in Birmingham for the coming season.

#### **Scheme for a Confederation of Arts**

Steps have been taken in Great Britain to found a "Confederation of Arts" under the aegis of the National Federation of Professional, Technical, Administrative and Supervisory Workers. Under the scheme proposed the name of the organization will be the "British Confederation of Arts" and membership will be open to all properly constituted organizations of artists, professional and amateur. Such organizations may comprise academies, institutes, royal and other societies, protected associations, trade unions, educational and examining bodies, exhibiting and producing societies, benefit and insurance funds, and other organized groups connected with and controlled by workers in and for any of the artistic professions. The arts to be included in the scheme will be those of literature, music, drama, dancing, photography, design, painting, sculpture, architecture,

town-planning and such other arts as may be admitted by the Governing Body. The objects of the Confederation will include the safeguarding of the common interests of all workers in the artistic professions.

**Agricultural  
credit in  
Great Britain**

The report of a Committee on Agricultural Credit appointed by the late Government in

Great Britain has been presented to the Minister at the head of the British Board of Agriculture, and the proposals have received the approval of the Cabinet. The report recognizes the importance of the agricultural industry, and the special claims to consideration of persons engaged in it. The Committee points to the increase since 1914 in the number of owner-occupiers, and are of the opinion that "there is little doubt that in certain individual cases purchasers were directly influenced by the Corn Production Act, 1917, and the Agriculture Act, 1920." Such purchasers have suffered from the effect of the repeal of the Corn Production Act in 1921. The Committee recommends that farmers who purchased their holdings between the date of the passing of the Corn Production Act, 1917, and the Repeal Act, 1921, should be enabled to obtain loans by an approved society operating under the aegis of the State, such loans not to exceed 75 per cent of the present value of the holding concerned, and to be repayable within a period of 40 years on an annuity basis. Funds for this purpose are to be advanced in the first instance by the Public Works Loans Board, and subsequently by the issue of guaranteed stock. The report further suggests that the State funds employed for the purpose of the scheme should be derived from the sale of Saving Certificates in rural areas. As regards short time credit for farmers to meet their current needs the Committee recommends that the state should encourage the immediate formation of agricultural co-operative

credit societies, and should place a capital sum at the disposal of each society, on the basis of £1 for every £1 of share capital raised by the society, of which not less than 5 shillings in the pound shall be paid up. These societies are to be affiliated to the Ministry of Agriculture or the Board of Agriculture for Scotland, and to be allowed to receive deposits and grant loans to members for agricultural purposes at their discretion.

The Committee on Agricultural Credit believes, that such a system of credit, based as proposed on mutual association and collective effort, will be in the interest of the State and will develop powerful self supporting natural machinery which will prove of permanent benefit to British agriculture.

**British labour  
and the  
industrial  
depression**

Sidney Webb, the well-known writer on economics, in an interesting article entitled "The British Labour

Movement and the Industrial Depression" appearing in the International Labour Review of February-March, 1923, describes the effects of the present economic depression on British trade unionism, its membership, funds, and organization, and its political and other external relations.

Successive wage reductions during 1921 and 1922 are held to have been effected to some extent independently of other economic phenomena, such as reduction in volume of production and profits, and to have been more severe than the fall in prices warranted. On the other hand, there has been but slight retrogression in hours of labour, while the spread of the custom of granting an annual holiday on pay has been a distinct development. The causes of the decline in trade union membership during these two years from nearly 8,500,000 to probably 6,000,000 persons are analysed. The depletion of trade union funds over the same period

is attributed to the enormous demands paid in unemployment benefit. On the other hand, the greater strength of the organization of the trade union movement, especially by means of the amalgamation of small unions, is stressed, and details are given.

The final pages of the article deal with the representation of labour in parliament and with forms of labour organization other than the regular trade union movement, and the author comes to the conclusion that the effects of the economic depression, great as they have been, have not, as in 1879, led to any collapse of trade union organization. This he attributes to the tardy results of an improved educational standard during the past half-century and other similar causes.

#### Enquiry on British civil servants' pay

The British Chancellor of the Exchequer has announced the appointment of a committee to enquire into the present standard of remuneration and other conditions of employment of the various classes of state servants employed in the civil service and in the three fighting services, and to make recommendations thereon. The committee consists of a chairman and two business experts. They are being asked to include in their report a classified statement of increase in the numbers and cost of personnel in the services consequent on duties imposed on them since July 1914 and the expansion of duties then existing.

#### Vacancies filled through the British employment exchanges

As a result of the prolonged industrial crisis the number of vacancies filled through the public employment exchanges in Great Britain has increased steadily in recent years, as is shown by the following figures submitted to the House of Commons on March 29, 1923, by Mr. Betterton, Parliamentary Secretary to the Ministry of Labour.

Year	Number of vacancies filled
1917-1918.....	1,575,702
1918-1919.....	1,347,957
1919-1920.....	1,008,136
1920-1921.....	880,175
1921-1922.....	726,179

#### Recent labour laws in New South Wales

Two Acts of industrial importance have recently been enacted by the Legislature of New South Wales, the Industrial Arbitration Act, 1922, No. 30, and the Workmen's Compensation (Lead Poisoning—Broken Hill) Act, 1922, No. 31. The texts of these acts are given in *The New South Wales Industrial Gazette* of November 30, 1922.

The Industrial Arbitration Amendment Act removes employees under the Public Service Act, 1902, from the jurisdiction of the Court of Industrial Arbitration, while preserving awards current or determinable upon any application pending on October 1, 1922; it makes provision to the intent that wages of Government employees other than employees under the Public Service Act, 1902, shall be fixed by the Court upon the principle applicable in respect of employees of non-governmental firms, etc.; it defines rural industries, and excludes rural workers from the Act, except in respect of Labour Exchanges and Unemployment Insurance, and dispenses with additional commissioners appointed to the New South Wales Board of Trade to represent rural industries; it empowers that Board, after public enquiry as to the increase or decrease in the average cost of living, to make living wage declarations at intervals of not less than three months. Special Courts for Crown matters and coal mining are abolished by the Act, and the Court of Industrial Arbitration is empowered to make or refrain from making awards, as it deems to be in the interest of employees in respect of unemployment, co-partnership, or profit sharing. It also provides that the New

South Wales *Industrial Gazette* shall be an alternative to the *Government Gazette* in the publication of awards, etc.

The Workmen's Compensation (Lead Poisoning—Broken Hill) Act gives effect to certain recommendations made by a Technical Commission of inquiry appointed upon the recommendation of the New South Wales Board of Trade to investigate the prevalence of miners' phthisis and pneumoconiosis in the metalliferous mines at Broken Hill. The Act confers compensation benefits on certain disabled workmen whose incapacity was deemed to be caused by their association with the mining industry, and, excluding them from the industry, makes provision for their medical treatment; declares lead-poisoning a notifiable disease in county Yancowinna, and provides for the constitution of a medical board for the medical examination of suspect or susceptible persons.

**National  
apprenticeship  
programme  
for plumbing  
and heating  
industries in  
United States**

The growing shortage of competent workmen in the plumbing and heating trades in the United States and the increasing difficulty in securing suitable boys as apprentices have caused grave concern to the National Association of Master Plumbers. In 1921, the Association requested the National Trade Extension Bureau of Evansville, Indiana, to assist them in meeting the situation. An apprenticeship department of the Bureau was formed which, in co-operation with the apprenticeship committee of the Association, has drawn up a programme which is suggested for the training of apprentices in all parts of the United States.

The programme provides for the registration and supervision of all ap-

prentices by local apprenticeship committees, a six months' probationary period, a contract of indenture, minimum wage scale, and a training period of not less than 2,400 hours with time allowances for training in vocational schools. It also makes provision for the transfer of apprentices from one shop to another and the right of appeal by apprentice or master to the local apprenticeship committee.

In order to attract the right kind of boys to the trade, special help-wanted posters and a bulletin entitled "A Business Future for American Boys" setting forth the vocational advantages of the plumbing and heating trades, have been prepared for distribution to boys leaving school. The qualifications desirable in an apprentice are listed as follows:—

First: An American. Second: Be at least 16 years of age. Third: Have at least a grammar school education. Fourth: Be of mechanical inclination. Fifth: Possess a reputation for honesty and ambition. Sixth: Be physically able to undertake work of this nature.

The programme lays particular emphasis on the acquisition of skill in the trade as the qualification of a journeyman rather than the serving of a definite apprenticeship period.

It is recommended that, wherever possible, local committees co-operate with the vocational schools and that apprentices be sent to part-time classes conducted during working hours rather than to evening schools. Suggested courses of study taken from various trade schools are outlined for the guidance of teachers and committees. The plan has been carefully thought out and contains many valuable suggestions for other industries interested in apprenticeship.

### Apprentice training of electrical workers

The local union of the International Brotherhood of Electrical Workers of Newark, N.J., recently endorsed a plan for an improved system of training apprentices in their craft along the lines proposed by an educational committee of the union. After drawing up this plan the committee requested the co-operation of the State Department of Public Instruction, the Essex County Vocational Board, the Newark Board of Education, and the Contractors' Association. Delegates from these bodies with the Committee of the Union formed a joint Committee on Vocational Training. Under the rules of the Union apprentices are required to serve four years before they are qualified to serve as journeymen and must pass an examination at the end of each year before admission to a higher grade. Under the proposed plan apprentices will be required to attend a vocational school for two nights a week, two hours each night. A course of instruction has been mapped out covering the entire electric wiring, maintenance and repair field. In the first year instruction is to be based upon types of wiring for bell system only, one hour per week to be devoted to each of the subjects, recognition of stock, trade mathematics, trade science and trade drawing. In the second year, instruction will be based on type of wiring for annunciators, fire alarms, burglar alarms, telephones, etc., one hour each week being devoted to trade judgment, trade drawing, trade science and trade mathematics. In the third year instruction will be based on type of wiring for light and power. One hour per week will be devoted to reading of blue prints and drawings and making of circuit drawings; one hour to trade science, including safety devices, safety switches, watt hour meters and water board installations, one hour to trade judgment and one hour to trade mathematics. In the fourth year, it is recommended that instruction should be based on all power apparatus. Trade judgment should include underwriter's rules, municipal and public service

regulations, etc., for installation of power apparatus, recognition and use of switchboard apparatus, oil switches, circuit breakers, regulating devices, etc. The suggested course includes one hour laboratory practice; one hour, science; one hour, trade drawing, reading and making connection diagrams; one hour trade mathematics; one hour, trade judgment.

### Prevention of infant mortality in United States

To the duties of the Children's Bureau of the United States Department of Labour there was added during the year 1922 the administration of an act for the "Promotion of the welfare and hygiene of maternity and infancy." This act, which became law on November 23, 1921, authorizes an annual appropriation of \$1,240,000 for a five-year period, of which \$50,000 may be expended by the Bureau for administrative purposes and for the investigation of maternal and infant mortality, the balance to be divided among the States accepting the act as follows: \$5,000 unmatched to each State, and an additional \$5,000 to each State if matched; the balance to be allotted among the several States on the basis of population and granted if matched. The act intends that the plan of work shall originate in the State and be carried out by the State, the local administration being in the child hygiene or child welfare division of the State agency of health or, where such a division does not exist, the agency designated by the State. A Federal Board of Maternity and Infant Hygiene, composed of the Chief of the Children's Bureau, the Surgeon General of the United States Public Health Service, and the United States Commissioner of Education, may approve or disapprove State plans, but the plans must be approved if "reasonably appropriate and adequate to carry out its purposes." Forty-two States out of forty-eight have accepted the terms of the act. Plans submitted by the States and approved by the Board vary greatly. Each plan is considered on its own merits. It is

claimed that the best planning requires a correlation of the money available with the number and causes of death among mothers and babies in the different parts of the State and the available local facilities.

An analysis of data relating to mortality among nearly 25,000 infants born in eight cities, as contained in the tenth annual report of the Children's Bureau, which has recently been issued, shows that the employment of a mother during pregnancy has an influence not only in higher stillbirth and neonatal mortality rates in the first month of life, but also in an increased proportion of premature births. The employment of the mother away from home during the infant's first year of life is reported to be accompanied by a marked increase in the infant mortality rate, due in part to a greater prevalence of artificial feeding among these babies.

**Child labour in United States** According to the tenth annual report of the Children's Bureau, United States Department of Labour, the extent to which the children of the United States have suffered from the nullifying of the Federal child labour tax law may be measured by the fact that only 13 states meet in all particulars the standards of the Federal law. Certain other states come fully up to one or more of the standards, but fail in regard to others. Of these, 14 establish as high an age standard for as many or more industrial occupations; 13 and the District of Columbia establish the same hour standards, or better standards for as many or more occupations; 12 and the District of Columbia prohibit night work for children in as many or more occupations; and 12 prohibit the employment of children under 16 years of age in mines and quarries. It is stated that the 1920 census, taken at the beginning of a period of industrial depression and with the Federal law discouraging their employment shows fewer children

under 14 and under 16 years gainfully employed than did the census of 1910, but that the decline is much less than it should be especially in view of the fact that the standards of protection have moved forward in the ten years. When the first Federal child labour law was passed, it is claimed that only two nations, Norway and Switzerland, had adopted the 14 year age minimum, and of the states, Ohio and Montana alone had an age standard higher than the Federal, and that now, according to most recent information available, Belgium, Bulgaria, Czecho-Slovakia, Denmark, Germany, Greece, Great Britain, the Netherlands, New Zealand, Norway, Roumania, and Switzerland have adopted a 14 year-age minimum and seven American states have passed that standard.

**U. S. Supreme Court declares minimum wage law invalid**

In the January issue of the LABOUR GAZETTE on page 77 an account was given of a decision of the Court of Appeals of the District of Columbia declaring unconstitutional the Minimum Wage law of the District which had been enacted by the United States Congress. The case was appealed to the Supreme Court of the United States. By a majority decision of the Supreme Court, Chief Justice Taft and Justice Sanford dissenting, the judgment of the lower court was sustained and the law was declared invalid. The decision was based on the grounds that the act forbade two parties having lawful capacity—under penalties to the employer—to contract freely with one another in respect of the price for which one should render service to the other in a purely private employment; that the law did not come within any of the exceptions to the general rule forbidding legislative interference with freedom of contract, nor did it touch on contracts of public interest, emergency and other considerations of a public nature; that it exacts from the employer an arbitrary payment for a pur-

pose and on a basis having no connection with his business, or the contract or the work the employee engages to do; that if this form of legislation should be legally justified, the field for the operation of the police power would be widened to a dangerous degree.

**Married women workers in German textile industry**

The German Textile Workers' Union, which has a total membership of 728,342, two-thirds of whom are women, recently instituted an enquiry concerning the position of women in the textile industry. The main object of this enquiry was to meet the attacks made on the eight-hour day and the forty-six-hour week which is usual in this industry. The enquiry showed that one-third of the women workers in the industry are or have been married and that of the married women 57.4 per cent had children of school age. The chief reason given for the employment of married women was found to be the insufficiency of the husbands' earnings. The total number of women in the industry who are the sole wage earners of the household was 13,581 or 29.5 per cent. As all married women have household duties in addition to their industrial occupation, it was considered necessary that they should have on at least one day of the week sufficient free time to attend to such household work as cannot be done in the morning or evening, before and after working hours. The results of the enquiry were claimed to have proved the impossibility of increased hours of work beyond eight per day, and, indeed, to indicate the urgent necessity of a further reduction.

**Organization of intellectual workers**

In spite of the many difficulties with which it is confronted, the movement for the organization of intellectual workers is making progress in Germany. Until recently the only central organization

of intellectual workers was the Federation of Non-Manual Workers' Union which collaborates with the manual workers' unions and takes the point of view that all intellectual workers are employees and should be organized as such. Recently, however, a new organization was founded entitled the Union of Intellectual Workers, with headquarters at Zehlendorf near Berlin. The President of the Berlin Lawyers' Association, Mr. A. Pinner, had also initiated a movement with a view to the foundation of a League of Intellectual Workers. All these efforts indicate a tendency towards the concentration of intellectual workers, similar to that which has recently appeared in some other countries, in particular in England and Italy.

---

Conventions of the following Canadian labour organizations and international labour organizations having affiliations in Canada will be held during the months of June and July:—

Canadian Association of Stationary Engineers, at Toronto, Ont., on June 26 to 28.

Dominion Postal Clerks' Association, at Kingston, Ont., in June.

American Flint Glass Workers' Union, at Baltimore, Md., on July 2-14.

Amalgamated Lithographers of America, at Cleveland, Ohio, in July.

International Jewellery Workers' Union, in Toronto, Ont., in July.

International Brotherhood of Blacksmiths, Drop Forgers and Helpers, in Kansas City, Mo., on July 9 to 19.

National Brotherhood of Operative Potters, at Atlantic City, N.J., in July.

Piano, Organ and Musical Instrument Workers' International Union, at New York, N.Y., on July 9 to 15.

Glass Bottle Blowers' Association, at Chicago, Ill., on July 9 to 21.

International Stereotypers and Electrotypers' Union, at Omaha, Neb., on July 16 to 21.

International Plate Printers and Die Stampers' Union, at Philadelphia, Pa., on July 16 to 23.

Stove Mounters' International Union, at Chattanooga, Tenn., on July 17 to 21.

The Trades and Labour Congress of Canada will hold its convention at Vancouver, B.C., on September 10.

The question as to the best way for workers to utilize their leisure will be considered at the meeting of the International Labour Conference which will be held in the spring of 1924. It is the intention of the International Labour Office to make a study of all the various agencies for the diversion and benefit of the workers and to report the facts to the Conference.

The International Labour Office has published the 1923 edition of the International Labour Directory. This volume contains information on the work of the International Labour Organization, a list of Government departments which deal with labour questions in all countries and lists of employers' and workers' organizations, organizations of intellectual workers, disabled men's associations, co-operative organizations and various other associations relating to labour and industry. It is published in English, French and German.

A Dominion Order-in-Council dated March 29, 1923, issued on the recommendation of the Minister of Marine and Fisheries, in accordance with a report of the chairman of the Board of Steamship Inspection, amended the "Instructions as to the Inspection of Boilers and Machinery of Steamships" approved on March 10, 1922. The amended section (i.e. Part 1, section 11) is that which governs hydraulic tests, boilers, pipes, etc., provision being made for more stringent tests of marine boilers.

By a proclamation issued in April under authority of the Fisheries Act (Statutes of Canada, 1914, Chapter 8, Section 45) the lobster fishery season in certain specified sections of Nova Scotia was extended so as to close on June 15

instead of May 31. Owing to severe weather conditions the catch in April was less than quarter of that in a normal season, and the fishermen hesitated to carry on the fishery in a normal way.

An Ontario Order-in-Council, dated April 11, rescinded various orders which were issued by the Provincial Fuel Controller during the period from September to December of last year regulating the price and quantity of coal supplied to purchasers at Toronto, Ottawa, Niagara Falls, Kingston, Oshawa, Guelph, Gananoque, and Lindsay. The action taken by the Ontario Government during the coal crisis last year was described in the LABOUR GAZETTE for October (page 1098).

Extension of time in connection with the working of mining claims, which were staked before the date of enlistment, have been granted to 441 returned soldiers in Ontario by Provincial Orders in Council issued under authority of the Act of 1915 (chapter 13). These extensions were granted for yearly periods except in 1920 and 1921 when the orders provided for an extension of six months for each claim.

The Educational Statistics Branch of the Dominion Bureau of Statistics has recently issued a comprehensive and interesting report on all phases of educational work in Canada. The introductory notes give definitions of the educational terms and types of schools, also the regulation covering school years, vacations, ages of admission and compulsory attendance. The report, which is printed in both French and English, is divided into two parts. Part I contains brief reviews of educational developments during the year 1921 in each province, brief accounts of the educational activities of the Dominion Government and private schools, and a summary of educational legislation in each province. Part II consists of fourteen different sets of statistical tables covering all branches of the work in every province.

Under the auspices of the Department of Mines of Ontario, a four-year course is provided in the mining departments of the High Schools at Sudbury and Haileybury for boys of High School standing. The course includes academic instruction in English and mathematics, and practical instruction in physics, mechanical drawing, mineralogy, metallurgy, assaying and mining. Special day and evening school classes for prospectors have been conducted at the High Schools where there has been a demand for such classes. The Provincial Department of Mines also supplies companies and miners in Northern Ontario with information free of charge.

A movement to secure the enforcement of the Lord's Day Act in the Province of Quebec was planned at a meeting of labour and social organizations of the Province, held at Montreal on April 17. Among the organizations represented were the National and Catholic Unions, the Young Men's Catholic Association, the Catholic Association of Commercial Travellers, and the Popular Social School. Sunday labour was said to be prevalent in the pulp and paper, needle, and metal trades in the Province.

The regulations of the Alberta Minimum Wage Act as they affect female bookbinders were criticized at a recent meeting of the Calgary Trades and Labour Council, when the secretary of the local bookbinders' union alleged that since the new order was issued some employers were "using the \$14 set by the Minimum Wage Board as a lever for reducing wages," and that girls were being dismissed in consequence of the order.

The United States Secretary of Labour, Hon. James J. Davis, and Professor F. C. Caldwell, of the Department of Electrical Engineering, Ohio State University, have recently been elected directors of the Eye Sight Conservation Council of America, of which

Mr. L. W. Wallace is president. The Council will act with leading engineers, educators, state and federal officials, economists and civic leaders in a nation-wide plan to conserve vision in industry and educational institutions. The movement is being directed from New York by Mr. Guy A. Henry, general director of the Council.

Mr. Morton G. Lloyd, chief of the safety engineering section of the United States Bureau of Standards, declared recently at a joint session of the American Society of Mechanical Engineers and the American Society of Safety Engineers, that "The Federal Government is spending annually about \$1,350,000 for accident prevention and sanitation work in industry, representing an expenditure of about 13 cents per capita. The railroads of the country alone paid out in 1917 over \$33,000,000 chargeable to accident injuries. There were in that year 10,087 fatalities and 210,729 cases of injuries. The average cost was thus over \$150 per accident".

A pamphlet of interest to persons engaged in Social Service work has recently been issued by the American Association of Social Workers. It is entitled "Social Work: an Outline of its Professional Aspects," and it may be obtained from the Association at 180 East Twenty-second street, New York, at the price of twenty-five cents. In this pamphlet are briefly described the various lines of activity open to the social worker and the sort of training necessary for work along each of these lines. The subjects discussed in this pamphlet are dealt with under the following headings: "The Profession of Social Work," "Social Case Work," "Social Group Work," "Community Organization," "Institutional Work," "Social Research," and "Specialties used in Social Work." Brief reference is also made to the salaries of professional workers, and to the training necessary for entering this profession.

An organized effort made in France to induce workers to devote their spare time to gardening has resulted in the cultivation of 160,000 gardens on land specially provided for the purpose. This is an increase of 72,000 gardens more than existed in 1919 when the eight hour day was generally established.

The Conference of Trade Unions of Denmark recently issued a record of its growth during the quarter of a century of its existence. The record shows that in 1919 Danish industrial workers

were organized to the extent of 89.6 per cent as compared with 53 per cent ten years earlier.

The Advisory Committee of the League of Nations on the Traffic in Women and Children met at Geneva from March 22 to 27, 1923. A resolution was adopted recommending that an international enquiry be undertaken, in close collaboration with the International Labour Office, concerning the nature and extent of the traffic in women and children, and suitable measures for the suppression of such traffic.

---

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION.

### The Labour Situation, Strikes, Prices.

#### The Labour Situation.

**E**MPLOYMENT as indicated in reports from employers showed a fairly large reduction at the beginning of April, largely due to continued contractions in logging, supplementing declines due to shutdowns over the Easter holidays. Conditions continued to be better than during the same month of 1922 and that also in 1921.

At the beginning of April the percentage of unemployment among members of trade unions was 6.8 as compared with 6.4 at the beginning of March, and with 9.6 at the beginning of April, 1922.

The Employment Service of Canada report a decline in the daily business transacted in March by the offices in the various provinces as compared with February, although compared with March, 1922, a slightly higher level of employment was maintained.

The following is a brief survey of employment conditions at the end of April 1923 as noted by the Superintendents of the offices of the Employment Service of Canada.

In the Maritime Provinces the continued bad weather delayed farming to a great extent, while building and construction operations showed continued slackness. A brisk demand for river drivers with a fair supply of applicants was reported. A number of women household workers was required.

In Quebec the demand for farm labour, begun at the latter part of March, continued active throughout April. Manufacturing industries have changed but slightly since last reported, the occupations showing improvement being connected with the metal trades. Building tradesmen were in demand in the majority of the offices and considerable numbers of construction men were placed. Since the opening of navigation on the St. Lawrence marked expansion is anticipated in all trades.

In Ontario an improvement in employment was shown, especially in the number of vacancies available for farm workers. An advance in construction and building was noted, although numbers of labourers and building mechanics were still unemployed. In some localities work had progressed

so rapidly that a shortage of labour was probable in the near future. In the mining districts there was a surplus of experienced miners, the majority of the work offered being for labourers and semi-skilled workers. River driving had commenced and the offices in the Northern districts placed large numbers of men on this work. Manufacturing industries continued to show slight gains in employment especially in the metal trades and in textiles. An increase in the number of orders for women institutional workers was shown, while trained women for city and country work were hard to secure in sufficient numbers.

In Manitoba there was a slight renewal of activity in farming, and numbers of workers were placed. The situation in the building industry remained much as previously reported with prospects of improvement in view as soon as the fine weather approaches. A decline was shown in the calls for permanent household help, but casual workers were required in large numbers.

Seasonal slackness in the logging industry in Saskatchewan was partially counteracted by the increased demand for farm workers. A shortage of experienced farm labour was reported in most localities. Construction operations showed some improvement, although railway work on a large scale had not yet begun. Housekeepers and domestics were in demand in large numbers with a fair supply of applicants.

In Alberta numerous calls for farm labour were reported, but the supply of applicants was inadequate to meet the demand. Building conditions were improving, the calls at present being mainly for labourers, carpenters, and workers for railway maintenance and construction.

In some localities of British Columbia a slightly increased demand for loggers was felt, while conditions in the building industry showed expansion. The

manufacturing industries were employing large numbers and work along shore was very brisk. No marked gains in demand were reported in the farm group, placements being confined chiefly to the Okanagan district.

#### EMPLOYERS' REPORTS

According to reports tabulated by the Dominion Bureau of Statistics, the volume of employment as indicated by employers declined considerably at the end of March. The contractions were especially heavy in logging, indicating between-season inactivity, and in the manufacturing industries, in which many shutdowns were reported over the Easter holidays. On the other hand, the commencement of spring operations in the out-of-door industries, although retarded by the late season, caused moderate improvement. The tendency in all districts except British Columbia was downward. Ontario firms registered the largest reductions in payroll; the shrinkage in Quebec and the Prairie Provinces was also extensive. The losses in logging were very heavy, especially in Ontario, and curtailment of operations in the railway car shops and in other manufacturing works over the holiday accounted for a large part of the decrease in these provinces. A reverse situation in bush operations, however, was indicated in British Columbia, where the firms reporting showed considerable additions to their staffs. Metallic ore mining and transportation in that province, moreover, showed an increase.

An analysis of the returns by cities shows that in Toronto improvement was reported by the concerns making returns, but in Montreal, Ottawa, Hamilton, Winnipeg and Vancouver a downward tendency was evidenced. Retail stores and iron, steel and other manufacturing plants in Toronto reported the gains. On the other hand, manufacturers of biscuits and musical instruments were less fully engaged, as were also printing and publishing

shops. The closing of the locomotive works over the holidays affected employment in Montreal to a marked degree. The fluctuations in Ottawa were slight; a comparatively small reduction in the pulp and paper industries accounted for practically all the loss in that city. Textile and tobacco manufacturers in Hamilton reported a large proportion of the decline, but, on the other hand, the iron and steel industries afforded more employment than in February. The changes in Winnipeg were small, the largest decline taking place in construction and local transportation. In Vancouver the most important contractions were indicated in sugar refineries, sawmills and retail stores. As mentioned above, the heaviest reductions in working force during March were reported in logging; the decreases in manufacturing took second place and were followed by declines in coal mining due to seasonal causes. The losses in manufacturing were chiefly owing to temporary curtailment of operations over Easter, and it was expected that recovery would occur early in April. Within that division the most pronounced reductions were reported in railway car and locomotive shops. The textile industries and biscuit, confectionery and sugar plants also were decidedly slacker. On the other hand, lumber mills showed some seasonal improvement and glass, brick and electrical apparatus concerns were busier. The beginning of spring-time operations caused moderate improvement in transportation and construction, although work in those industries was no doubt delayed by the unfavourable weather prevailing during March. The service, trade, communication and metallic ore divisions also reported increased activity.

TRADE                      The situation among  
UNION                      trade union members  
REPORTS                      as reported by 1,404  
                                 labour organizations  
with a combined membership of 149,000  
persons was slightly less favourable at

the end of March, the percentage of idleness standing at 6.8 as compared with 6.4 at the close of February. In comparison with the returns for the corresponding month of last year improvement was registered, the unemployment percentage on March 31, 1922, having been 9.6 (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.) Improvement over the previous month was reported in Nova Scotia, New Brunswick, Ontario, Manitoba and Saskatchewan, the largest percentage gain being shown in Nova Scotia where more employment was afforded workers in the building and construction trades, and in the mining and transportation industries. Of the decreases in the other provinces that of over 7 per cent in British Columbia was the most noticeable, due to lessened activity for fishermen, garment workers and employees in the shipping and stevedoring division. In all provinces more favourable conditions prevailed than at the close of March, 1922. In the manufacturing industries employment was on a slightly higher level at the end of March than at the close of the preceding month. Bakery, furniture, jewelry, pulp and paper, iron, steel and glass workers and metal polishers were better employed. Cigar and tobacco, garment and leather workers, on the other hand, were not quite so fully engaged. Within the iron and steel group moulders, patternmakers and sheet metal workers showed less slackness, but blacksmiths, boilermakers and iron ship builders and machinists were not quite so active, and employment for

railway carmen remained on the same level as in the previous month. Coal miners in Nova Scotia were better employed, but in the Alberta and British Columbia coal fields considerable unemployment was registered. Quarry workers and asbestos miners reported no idle members. Some improvement over the preceding month was reported in the building and construction trades. Steam shovel and dredgemen, bricklayers, masons and plasterers, carpenters and joiners, electrical workers, plumbers and steamfitters, tile layers, lathers and roofers and hod carriers and building labourers reported less unemployment, but bridge and structural iron workers, granite and stone cutters and painters showed more unemployment. In comparison with March of last year employment for all tradesmen in the building division, with the exception of bricklayers, masons and plasterers, granite and stone cutters and tile layers, lathers and roofers was in greater volume. More employment than in the previous month was afforded transportation workers owing to greater activity among steam railway workers. Street and electric railway employees, teamsters and chauffeurs and workers in the shipping and stevedoring division, however, were less fully engaged. Retail clerks were slightly busier as were also hotel and restaurant employees and stationary engineers and firemen. Theatre and stage employees reported more idleness and the percentage of unemployed barbers was the same as that reported at the end of February.

A summary of employment during the quarter ending March 31, 1923, as reported by trade unions, appears elsewhere in this issue.

**EMPLOYMENT OFFICE REPORTS** During the month of March, 1923, the offices of the Employment Service of Canada made 28,979 references to positions and effected a total of 27,641 placements. Of these, placements in regular employ-

ment numbered 15,005 (of which 12,283 were of men and 2,722 of women) and 12,636 were made in casual work. Applications for employment numbered 37,820, of which 29,224 were from men and 8,596 from women. The number of vacancies notified by employers to the Service was 31,827, of which 23,179 were for men and 8,648 for women. A comparison with the reports for the preceding month shows a decline in transactions during March, 1923, but, compared with the corresponding month a year ago, approximately the same volume of business was maintained.

A report in detail will be found elsewhere in this issue.

**BUILDING PERMITS AND CONTRACTS AWARDED** According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during March was substantially higher than in the preceding month but lower than in March, 1922. The estimated value of the permits issued during the month was \$8,544,228 as compared with \$4,744,478 in February, 1923, and with \$9,472,576 in March, 1922.

According to the *Canadian Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded during March amounted to \$19,954,800 as compared with \$13,311,800 in February and with \$13,465,500 in March of last year. There was, therefore, an increase of 49.9 per cent in the former and 48.2 per cent in the latter comparison. Of the total for the month under review \$112,000 or .6 per cent was to be spent in the Maritime Provinces; \$15,647,600 or 78.4 per cent in Quebec and Ontario and \$4,195,200 or 21.0 per cent in the Western Provinces. A further analysis of the total for the month shows that \$5,974,200 was to be spent on residences, \$7,566,300 on business establishments, \$3,843,000 on industrial buildings and \$2,571,300 on engineering contracts.

PRODUCTION  
REPORTS

The Dominion Bureau of Statistics reports that the production of pig iron during March was greater than the output of any month since November, 1920, and amounted to 65,297 long tons, an increase of 21,047 tons or 47.6 per cent over the production of the preceding month, and an increase of 30.6 per cent over the monthly average for 1921 and 100.9 per cent over the average for 1922. The production of basic pig iron in March was more than double the output in the preceding month and amounted to 55,008 tons, but the production of foundry and malleable iron was considerably less than in February. There was no change in the number of furnaces in blast, there being in operation during the month three furnaces at Sydney, two at Hamilton and two at Sault Ste. Marie. The production of ferro-alloys increased from 1,977 tons in February to 2,213 tons in March, 1923. The report states that exports of ferro-silicon to the United States during 1922 increased to such an extent over the exports for 1921 that the United States Treasury Department made an investigation and issued a finding under date of March 23, 1923, that ferro-silicon was being imported from Ontario into the United States in such volume and at such a price as injuriously to affect the ferro-silicon industry in that country.

Steel production in March amounted to 89,088 long tons, an increase of 91.4 per cent over the production of the previous month, the output exceeding the average monthly production of the three previous years by 41.4 per cent. The cumulative production during the first quarter of 1923 was 183,586 tons as compared with 105,340 tons during the same period of the preceding year.

A report from the Department's correspondent at Cobalt states that seven cars containing approximately 519,944 pounds of silver ore were shipped during March from the Cobalt camp, as

compared with five cars containing 347,890 pounds in the previous month. There was also shipped from the Keeley mines of South Lorrain, three cars containing approximately 226,401 pounds of silver ore. The Nipissing mine shipped 220 bars containing 253,783.35 ounces of silver, and The Mining Corporation of Canada shipped 259 bars containing 260,647.50 ounces, making a total of 479 bars containing 514,430.85 ounces for the month of March, as compared with 563 bars containing 615,369.43 ounces in the previous month.

A report from the British Columbia Forestry Branch shows that 138,689,579 feet B.M. of timber was scaled in that province during March. The total includes Douglas fir, 63,253,600 feet; red cedar, 29,976,912 feet; hemlock, 17,829,650 feet; spruce, 10,056,538 feet; balsam, 4,832,834 feet; jack pine, 5,597,329 feet; yellow pine, 3,131,847 feet; white pine, 1,329,283 feet; larch, 2,656,205 feet; cotton wood, 29,067 feet, and other species, 5,314 feet.

The gross earnings of the Canadian National Railways (including electric lines) according to a preliminary statement issued, amounted to \$9,018,189 in March as compared with \$9,510,561 in March, 1922, the gross earnings for the first three months of 1923 amounting to \$26,229,030 as compared with \$25,544,320 in the previous year, an increase of \$684,710. The gross earnings of the Canadian Pacific Railway for March were given in a preliminary statement as \$13,585,763 in comparison with \$13,847,627 for March of last year; and for the three months ending March 31, 1923, as \$37,894,542 as compared with \$36,489,295 for the same period in 1922.

## Strikes

The time loss due to industrial disputes reported to the Department during April was less than during March and also less than during April, 1922. There were in existence at some time

or other during the month 20 disputes, involving 2,173 employees and a time loss of 32,303 working days, as compared with 16 strikes in March, involving 1,459 employees and a time loss of 34,075 working days. In April, 1922, there were recorded 26 disputes involving 13,086 employees, with an estimated time loss of 272,946 working days. At the beginning of April there were on record 12 disputes, involving 1,115 employees. Eight new disputes commenced during April, involving 1,058 employees, with a resulting time loss of 6,058 working days. One of the strikes commencing prior to April and four of those commencing during April terminated during the month. At the end of the month, therefore, there were 15 disputes involving 1,214 employees.

#### Prices

The movement in wholesale prices during April continued upward, the index number having again showed an increase over the previous month while the family budget in terms of retail prices at the beginning of April was somewhat lower than in March owing to a seasonal decline in the prices of eggs.

In wholesale prices the index number stood at 227.4 in April as compared with 226.0 in March; 225.0 in April, 1922; 253.7 in April, 1921; 356.6 in May, 1920 (the peak); and 136.7 in April, 1914. In farm products grains and fodder advanced substantially while dairy products were much lower owing to seasonal declines in butter

and eggs. Important advances also occurred in building materials, iron and steel, and in raw furs, while livestock and meats and miscellaneous groceries showed smaller advances. In addition to dairy products declines appeared in textiles, some metals, fuel and lighting, and chemicals. Compared with a year ago, grains and fodder, animals and meats, fish, fruits and vegetables, house furnishings, drugs and chemicals, and sundries were lower. All the other groups were higher.

In retail prices the average cost of a weekly family budget of twenty-nine staple foods in terms of the average prices in some sixty cities was \$10.64 at the beginning of April as compared with \$10.79 for March; \$10.26 for April, 1922; \$12.68 for April, 1921; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914.

Including the cost of fuel and rent with that of foods the figures averaged \$21.21 at the beginning of April as compared with \$21.41 for March; \$20.66 for April, 1922; \$23.31 for April, 1921; \$26.92 for July, 1920 (the peak); and \$14.32 for April, 1914. The price of eggs showed a net decline of 26 cents in the cost of the two dozen included in the family budget. Smaller declines occurred in veal, pork, bacon, lard, bread, and prunes. The most important advances were in butter, cheese, and sugar, but there were less important increases in mutton, flour, beans, and tea. Fuel and rent were slightly lower.

# CANADIAN IMPORTS AND EXPORTS DURING MARCH, 1923

THE figures shown below are derived from a statement prepared by the Department of Customs and Excise showing the imports of various classes of commodities, free and dutiable, for the months of March, 1922 and 1923, and for the twelve months ending in March of these years, and the exports,

domestic and foreign, of similar classes of goods for the same periods.

The following table shows the imports, free and dutiable, and the exports, domestic and foreign, of the various classes of products, for the month of March, 1923:—

Classes of goods	Imports		Exports	
	Free	Dutiable	Domestic	Foreign
	\$	\$	\$	\$
Agricultural and vegetable products, mainly foods	2,711,895	8,892,174	19,809,538	116,230
Agricultural and vegetable products, other than foods	3,498,892	3,113,548	2,855,400	239,621
Animal and animal products.....	2,073,453	3,638,953	8,919,439	57,309
Fibres, textiles and textile products.....	7,257,485	13,204,659	904,796	168,909
Wood, wood products and paper.....	1,406,294	2,382,982	24,695,813	42,968
Iron and its products.....	1,699,489	15,132,893	7,105,765	237,589
Non-ferrous metals and their products.....	1,235,692	2,908,296	6,372,567	50,856
Non-metallic minerals and products.....	7,712,099	7,991,863	3,636,711	59,459
Chemicals and allied products.....	1,239,359	1,669,966	1,820,771	29,065
Miscellaneous commodities.....	1,415,775	2,637,690	1,214,799	235,030
Totals.....	30,250,433	61,622,994	77,335,599	1,220,076

In March, 1923, the duty collected amounted to \$14,919,412 as compared with \$14,289,300 in March, 1922.

The following comparative table shows the values of merchandise en-

tered for consumption and the merchandise, domestic and foreign, exported in the months of March, 1922 and 1923, and in the twelve months periods ending March of these years respectively:—

	Month of March		Twelve months ending March	
	1922	1923	1922	1923
	\$	\$	\$	\$
Merchandise entered for consumption.....	79,337,378	91,873,427	747,762,984	802,457,043
Merchandise, domestic, exported.....	59,539,313	77,335,599	740,240,680	932,229,443
Total.....	138,876,691	169,209,026	1,488,003,664	1,734,686,486
Merchandise, foreign, exported.....	1,308,151	1,229,076	13,686,329	13,844,394
Grand total, Canadian trade.....	140,184,872	170,438,102	1,501,689,993	1,748,530,880

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF APRIL, 1923.

**D**URING the month of April the Department received a report of a Board of Conciliation and Investigation established to deal with a dispute between the Corporation of the City of Prince Rupert, B.C., and various classes of its employees, being members of Civic Employees' Union No. 20.

### Applications received

During the month three applications for the establishment of Boards of Conciliation and Investigation were received as follows: (1) From employees of the Ottawa Electric Railway Company, being member of Division 279, Amalgamated Association of Street and Electric Railway Employees of America. A Board was established and members were appointed as follows: Mr. F. T. Costello, Alexandria, chairman, Mr. George D. Kelley, Ottawa, employers' nominee and Mr. Hal J. Burns, Ottawa, workers' nominee. The chairman was appointed by the Minister of Labour in the absence of a joint recommendation. (2) From employees of the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, being checkers and coopers, members of Lodge No. 927, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. (3) From employees of the Canadian National Railways (Western Lines), being all classes of employees in shops and roundhouses. Formal action as to the two last mentioned applications had not at the close of the month been taken.

### Other Proceedings under the Act

In the case of a dispute between the Canadian National Railways, Western Lines, and certain of their employees being dining and sleeping car employees, members of the Canadian Brotherhood of Railroad Employees, a Board was

completed by the appointment of Mr. W. J. Donovan, Winnipeg, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Messrs. C. E. Dafoe, Winnipeg, and David Campbell, Regina, nominees of the employers and men respectively.

In the case of a dispute between the Brantford Municipal Railway Commission and certain of its employees, being street railway workers, members of Local Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America, the joint consent of both parties to the dispute was required under Section 63 of the Act, as this industry did not come directly within the scope of the Act. The commission had, as stated in the April issue of the LABOUR GAZETTE, at first objected to the establishment of a Board and no action was then taken, but later agreed to the proposal and a Board was accordingly established and members appointed as follows: Mr. J. G. O'Donoghue, K.C., Toronto, chairman, Messrs. F. H. McGuigan, Toronto, and James Simpson, Toronto, nominees of the employer and men respectively. The chairman was appointed on joint recommendation.

In the case of a dispute between the Winnipeg Electric Railway Company and certain of its employees, being members of the Gas Workers' Union of Winnipeg (Independent), a Board was established and members appointed as follows:—Mr. W. J. Fulton, Winnipeg, appointed by the Minister of Labour as for the company in the absence of a recommendation, Mr. R. S. Ward, Winnipeg, appointed on recommendation of the workers, and Rev. Dr. C. W. Gordon, Winnipeg, appointed chairman in the absence of a joint recommendation.

• Report of Board in dispute between the Corporation of Prince Rupert, B.C. and its civic employees.

A report was received from the Board established to deal with a dispute between the Corporation of the city of Prince Rupert, B.C., and certain of its employees being members of Civic Employees Union No. 20. The Board was composed of His Honour Judge F. McB. Young, chairman, appointed by the Minister on the joint recommendation of the other two members of the Board, Messrs. W. F. Fisher and T. Ross Mackay, both of Prince Rupert, nominees of the Mayor and employees respectively. The report was unanimous and contained recommendations for the settlement of the dispute.

The text of the report is as follows:

Report of Board

Re Industrial Disputes Investigation Act, 1907, and re differences between the Corporation of the City of Prince Rupert, British Columbia, and Civic Employees' Union No. 20, Trades Congress of Canada.

To the Honourable James Murdock, Minister of Labour, Ottawa.

The undersigned, members of the Board of Conciliation and Investigation appointed in the above matter, beg respectfully to report as follows:

On February 27, 1923, the City Council passed a resolution reducing the wages of civic employees as follows:

Position	Salary	Revised	Reduction
Accountant. . . . .	\$175	\$150	\$25
Head Clerk Utilities. . . . .	170	150	20
Tax and Assistant Clerk. . . . .	165	150	15
Cashier. . . . .	150	135	15
Stenographer. . . . .	84	80	4

Outside Staff—Public Works

Foreman, streets, etc. . . . .	\$175	\$160	\$15
Water Foreman (working). . . . .	185	175	10
Driver, garbage truck. . . . .	155	140	15
Scavenger. . . . .	140	130	10
2 N. S. men. . . . .	153 (each)	145	8

In addition to this under the old salary system the man attending to horses had an extra allowance of \$11.00 per month, this being increased to \$13.00.

Fire Department

Machinists Driver..	\$175	\$170	\$ 5
2 Drivers. . . . .	154 (each)	150	4
3 Firemen. . . . .	143 (each)	140	3

Labour (outside) reduced from 65 cents to 50 cents per hour.

At the hearing of the dispute no objection was taken to any of the above reductions except as to outside labour—therefore, with the exception mentioned, the civic salaries shall stand as revised by the Council and set forth in the above list.

On January 22, 1923, a resolution was passed by the City Council changing the working hours of the clerical staff from seven to eight hours per day.

On April 6, 1923, the members of this staff took this matter up directly with the Council and it was satisfactorily arranged between them as set forth in the following letters:

"Prince Rupert, B.C.,  
April 6th, 1923.

"D. J. Matheson, Esq.,  
City Treasurer,  
City Hall.

Dear Sir,

We, the undersigned, members of your staff have been discussing the change in office hours from 7 to 8 hours per day, which became effective on March 1st last.

In view of 7 hours being a more or less recognized office day throughout the Dominion we wish to petition the Council through you to meet us one-half way and make our working day 7½ hours, from 8.30 to 5 during the summer months and 9 to 5.30 during the winter months.

Trusting we can meet with an amicable settlement as to this matter,

We are,  
Yours respectfully,  
(Sgd.) E. S. ALLISTONE,  
A. BROOKSBANK,  
E. V. M. HILCHEY,  
W. S. WILLISCROFT,  
M. C. ASTORIA,  
F. VICKERS,  
HARRY M. BIRCH."

*Reply*

"April 7th, 1923.

"Mayor and Aldermen,  
Request for 7½ hour day.

Gentlemen:

Your Finance Committee recommends that the request from the office staff made to the Treasurer for a 7½ hour day be referred to the Council with the recommendation that a 7½ hour day be put into effect from date until September 30th, 1923, and if it is found that the service is unimpaired it can be continued permanently. Office hours to be from 8.30 a.m. to 5 p.m. during summer months and 9 a.m. to 5.30 p.m. during winter months if continued.

Respectfully submitted,

"Signed by Finance Committee."

April 9th, 1923.

(Extract Minute of Council meeting of above date)

"Moved by Alderman Stevens, seconded by Ald. Currie, that the report of the Finance Committee recommending that the request from the office staff, made through the Treasurer, for a 7½ hour day be put into effect from date until September 30th, 1923, and, if it is found that the service is unimpaired, it can be continued permanently. Office hours to be from 8.30 a.m. to 5.00 p.m. during the summer months and 9 a.m. to 5.30 p.m. during the winter months if continued. Carried."

In the above circumstances the only remaining dispute to be determined by the Board is the amount that should be for all outside labour.

After a full consideration of the evidence and after hearing what was alleged by the representatives of both sides it is the unanimous decision of the Board.

1. That the rate of wages to be paid by the city for this class of work should be sixty cents per hour and that overtime be paid at the same rate.
2. That the city in selecting men for such work give a preference to married men with families residing in the city of Prince Rupert.

All of which is respectfully submitted.

(Sgd.) F. McB. YOUNG,  
Chairman.

(Sgd.) W. E. FISHER,

(Sgd.) T. ROSS MACKAY,  
Members of Board.

Dated at Prince Rupert, B.C., April 17, 1923.

## COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS.

THE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should correspondingly be increased or decreased, has forwarded its report to the Department of Labour for the quarter ending March 31, 1923.\* The Commission consisted of Mr. Matthew Gunness, representing the miners; Mr. Tulley Boyce, representing the operators, and Mr. F. E. Harrison, Fair

Wages Officer of the Department of Labour, chairman.

As in previous investigations, forms containing a list of groceries, provisions, meats, etc., were sent out to the merchants and dealers with whom the majority of the miners were accustomed to trade in the various localities. The method of computing the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices at the end of the quarter, over the prices at the end of the preceding quarter, for groceries, provi-

\*For previous orders see LABOUR GAZETTE, March, 1923, and various preceding issues.

sions, meats, etc., and to add a further two-fifths of this increase (or decrease) as an equivalent to cover similar increases (or decreases) in clothing, etc.

For the quarter ending March 31, 1923, an increase of 2.24 per cent was ascertained, which amounted to an increase in wages of 7 cents per day both where the base rate was \$3 per day, and where the base rate was \$3.15, the increase in wages to become effective on May 1, 1923, and to apply to all underground service, clerical and office employees.

Sharp increases were noted in sugar and evaporated peaches.

Slight increases were noted in syrup, vinegar, pickles, standard and buckwheat flours, rolled oats, cheese, ham, butter, tea and mutton.

A sharp decrease was noted in soda biscuits.

Slight decreases were noted in molasses, oatmeal, lard, currants, evaporated figs, prunes and pork.

No changes were noted in jams, peas, beans, canned goods, matches, salmon, lunch tongue, evaporated apricots, brooms, soaps, graham, whole-wheat and pastry flours, cornmeal, cookies, bacon, evaporated milk, coffee, extracts, cream of tartar, raisins and veal.

### STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1923.

THE following table shows the number of strikes and lockouts in existence in Canada at some time or other during April, 1923, reported to the Department, together with the number of employees involved and the time loss in working days, as compared with the previous month and with April, 1922.

	Disputes	Number of employees involved	Time loss in working days
April, 1923.....	20	2,173	32,303
March, 1923.....	16	1,459	34,075
April, 1922.....	26	13,086	272,946

The record of the department includes lockouts as well as strikes, but a lockout or an industrial condition which is undoubtedly a lockout is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together.

A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting more than one

working day. Disputes of only one day's duration or less and disputes involving less than six employees are not included in the published record, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

As in the previous months the group showing the greatest time loss, 26,175 working days, was in the printing and publishing group. This loss was caused by the strikes of printing compositors and pressmen in job printing offices which occurred in different cities throughout Canada during 1921 and 1922. Eight new disputes were reported to the Department as having commenced during April, four of which were terminated by the end of the month.

In addition to the strikes reported during the month, information was also received in the Department relating to a strike not recorded in the March issue of the LABOUR GAZETTE. This strike which involved 28 shingle sawyers and packers at Hammond, B. C., began on March 21, on a demand for

increased wages. The demand being granted, work was resumed on March 26. Information was also received concerning an interruption of work on a library building at Queen's University, Kingston, Ont., where labourers demanded a nine-hour day at 35 cents per hour instead of the 10-hour day at 30 cents per hour. The demands being granted, work was resumed the following day, the stoppage having been less than one half day.

Twelve disputes involving 1,115 workpeople were carried over from March. One of the strikes commencing prior to April and four of those commencing during April terminated during the month. At the end of April, therefore, there were on record 15 disputes, brewery workers, Toronto; rubber workers, Montreal; boot and shoe workers, St. Hyacinthe; photo engravers, Montreal; printing compositors, Hamilton; three strikes of printing compositors, Montreal; printing compositors, Toronto; printing compositors, Winnipeg; printing compositors and pressmen, Halifax; printing compositors and pressmen, Ottawa; printing compositors and pressmen, Vancouver; steam shovel men, New Welland Ship Canal, and electric railway motormen and conductors, Niagara Falls.

#### Disputes by Industries

The following is a review of disputes by those groups of industries in which strikes and lockouts occurred during the month in the order in which they appear in the statistical table.

#### MINING, NON-FERROUS SMELTING AND QUARRYING

Four strikes, involving 879 employees and resulting in a time loss of 3,951 working days, were reported as affecting this group during April. The strike of coal miners at Joggins, N.S., terminated on April 3, the men securing a partial increase in their rates of wages. Three new strikes were reported

as having commenced during the month, namely, coal miners at Birch Grove, N.S., and two strikes of asbestos miners at Robertsonville and Thetford Mines, Quebec. The miners at Birch Grove objected to two employees being dismissed, and after being out two days returned to work while the dismissals were being investigated. As a result of this investigation the men were re-engaged. Early in April, 93 employees of an asbestos mining company at Robertsonville demanded an increase in wages of five cents per hour. The company offered an increase of two and one-half cents per hour but this the men refused. After negotiations the men returned to work having accepted the increase of two and one-half cents per hour as from April 1, and an additional two and one-half cents per hour to become effective on May 1.

At Thetford Mines there occurred certain disturbances, involving about 500 miners, who were demanding the dismissal of the assistant manager of the mines on account of alleged unfairness in dismissing employees and in regard to certain working conditions. The dispute which began on April 23 was terminated through the mediation of outside parties following which the men returned to work on April 30, understanding that the assistant manager would be retired.

#### MANUFACTURING.

*Vegetable foods, drink and tobacco.*—A strike of 52 brewery workers occurred at Toronto on April 16, on the refusal of the employing company to renew an agreement with the union. This strike remained unsettled at the end of the month.

*Clothing.*—Sixty-five rubber workers at Montreal went on strike April 24, demanding recognition of the union. At the end of April the strike remained unsettled.

*Leather, fur and products.*—On April 17, some 29 shoeworkers went on strike

## STRIKES AND LOCKOUTS DURING APRIL, 1923.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to April, 1923.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Joggins, N.S. ....	70	70	Commenced January 20, against a reduction in wages. Settled by negotiations April 3.
MANUFACTURING—			
<i>Printing and Publishing:</i>			
Photo engravers, Montreal, Que...	30	750	Commenced May 2, 1921, for shorter hours, Terminated.
Printing compositors, Hamilton, Ont.	35	875	Commenced May 2, 1921. Alleged violation by employers of 44-hour clause in agreement. Terminated.
Printing compositors, Montreal, Que.	21	525	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Terminated.
Printing compositors, Montreal, Que.	205	5,125	Commenced July 1, 1921, for increased wages and 44-hour week. Terminated.
Printing compositors, Montreal, Que.	25	625	Commenced September 15, 1922. Employer refused to negotiate a new agreement with the union. Terminated.
Printing compositors, Toronto, Ont.	432	10,800	Commenced June 1, 1921, for increased wages and 44-hour week. Terminated.
Printing compositors, Winnipeg, Man.	157	3,925	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Terminated.
Printing compositors and pressmen, Halifax, N.S.	39	975	Commenced May 2, 1921, for shorter hours with same weekly wages. Terminated.
Printing compositors and pressmen, Ottawa, Ont.	80	2,050	Commenced June 1, 1921, for increased wages and 44-hour week. Terminated.
Printing compositors and pressmen, Vancouver, B.C.	12	300	Commenced May 2, 1921, for increased wages and 44-hour week. Terminated.
TRANSPORTATION—			
<i>Street and Electric Railways:</i>			
Motormen and conductors, Niagara Falls, Ont.	9	225	Commenced July 2, 1922, for recognition of the union. Terminated.
<i>Storage and Local Transportation:</i>			
Taxicab drivers, Montreal, Que. ....	.....	.....	Commenced March 8, against dismissal of employee. Information received indicates this strike terminated March 19.
(b) Strikes and lockouts commencing during April, 1923.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Birch Grove, N.S. ....	216	648	Commenced April 12, against discharge of employee. Terminated by negotiations April 16.
Asbestos miners, Robertsonville, Que.	93	233	Commenced April 9, for increased wages. Settled by negotiations April 12.
Asbestos miners, Thetford Mines, Que.	500	3,000	Commenced April 23, against employment of particular person. Terminated by negotiations April 30.
MANUFACTURING—			
<i>Vegetable foods, drink and tobacco:</i>			
Brewery workers, Toronto, Ont. ....	52	260	Commenced April 16, against introduction of open shop conditions. Terminated.
<i>Clothing:</i>			
Rubber workers, Montreal, Que. ....	65	390	Commenced April 24, for recognition of the union. Terminated.
<i>Leather, fur and products:</i>			
Shoeworkers, St. Hyacinthe, Que. ....	29	348	Commenced April 17, against dismissal of employees. Terminated.
<i>Pulp, paper and paper goods:</i>			
Paper workers, Beauharnois, Que.	80	880	Commenced April 11, for increased wages. Settled by compromise and work resumed April 23.
CONSTRUCTION—			
<i>Miscellaneous construction:</i>			
Steam shovel men, New Welland Ship Canal.	23	299	Commenced April 16, for monthly rates of wages and increased rates. Terminated.

at St. Hyacinthe against the dismissal of two fellow employees. The strike was still in existence at the end of April but information received indicates it was declared off early in May.

*Pulp, paper and paper goods.*—Paper-workers to the number of 80 went on strike at Beauharnois on April 18, for increased wages amounting to about 25 per cent. A compromise was effected and the men returned to work on April 23.

*Printing and publishing.*—Ten strikes of printing compositors and pressmen, involving 1,045 employees and result-

ing in a time loss of 26,175 working days, were carried over from the previous month's record and remained unsettled at the end of April.

#### CONSTRUCTION.

*Miscellaneous construction.*—A strike of 23 steam shovel men occurred on April 16, on the New Welland Ship Canal, when the men demanded monthly rates of wages and increased rates. Negotiations were carried on between the parties concerned, and officers of the Department of Labour visited the scene of the dispute. At the end of April the strike remained unsettled.

### STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING MARCH, 1923.

**T**HE British *Ministry of Labour Gazette* for April contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during March, 1923, based upon returns from employers and workpeople.

**NUMBER, MAGNITUDE AND DURATION.**—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in March, in Great Britain and Northern Ireland, was 52, as compared with 41 in the previous month and 46 in March, 1922. In these new disputes 47,000 workpeople were directly involved and 1,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred though not themselves parties to the dispute). In addition 38,000 workpeople were involved, either directly or indirectly, in 28 disputes which began before March and were still in progress at the beginning of that month. The number of new and old disputes was thus 80,

involving 86,000 workpeople, and resulting in a loss during March of 834,000 working days.

The largest dispute in progress was that which began in the Dundee jute industry on February 23 and culminated on March 23 in a general lockout, involving 29,000 workpeople. Other large disputes affected about 10,000 building operatives in the Eastern counties, 15,000 coal miners in Glamorganshire, and 8,000 farm workers in Norfolk.

**CAUSES.**—Of the 52 disputes beginning in March, 17, directly involving 22,000 workpeople, arose out of proposed reductions in wages; 10, directly involving 2,000 workpeople, on other wages questions; 11, directly involving 20,000 workpeople, on questions of unionism and non-unionism; and 14, directly involving 3,000 workpeople, on other questions.

**RESULTS.**—Settlements were effected during March in the case of 30 new disputes, directly involving 25,000

workpeople, and 8 old disputes, directly involving 1,000 workpeople. Of these new and old disputes, 18, directly involving 20,000 workpeople, were settled in favour of the workpeople; 5, directly involving 1,000 workpeople, in favour of the employers; and 15, directly involving 5,000 workpeople were compromised. In the case of 3 disputes, directly involving 160 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in March in Great Britain and Northern Ireland by groups of industries and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in March			Number of workpeople involved in disputes in progress in March	Aggregate duration in working days of all disputes in progress in March
	Started before March 1	Started in March	Total		
Building.....	1	8	9	13,000	173,000
Mining and quarrying.....	4	10	14	24,000	150,000
Metal, engineering and shipbuilding	7	13	20	2,000	16,000
Textile trades.....	3	3	6	32,000	313,000
Agriculture and fishing.....	2	1	3	11,000	138,000
Printing, paper, etc., trades.....	2	2	4	1,000	28,000
Other trades.....	9	15	24	3,000	18,000
Total, Mar., 1923..	23	52	80	86,000	834,000
Total, Feb., 1923..	36	41	77	40,000	337,000
Total, Mar., 1922..	51	46	97	246,000*	2,980,000*

\*Disputes involving 130,000 workpeople in the engineering industry and 80,000 workpeople in shipyards were in progress in March, 1922.

## CONVENTION OF DISTRICT No. 2, INTERNATIONAL ASSOCIATION OF MACHINISTS.

THE third convention of District No. 2, International Association of Machinists was held at Winnipeg, Man., on March 5 to 9, under the presidency of Mr. D. S. Lyon. About 50 delegates were present representing machinists on all Canadian railways.

Considerable attention was given to the question of the amalgamation of the sixteen standard railway organizations, and the convention declared itself in favour of this movement, but recommended amalgamation with two of the railway brotherhoods before amalgamation with the semi-skilled crafts. A resolution claiming fuller representation upon the executive of Division No. 4, Railway Employees' Department of the American Federation of Labour, and also upon the

schedule committee was adopted, as was also a resolution demanding recognition of the District's secretary-treasurer by railway officials in order that the Association might have his services in the handling of grievances.

It was decided that the District should institute an employment bureau so that men out of work might be kept in close touch with positions vacant. The convention was opposed to medical inspection of employees by their employers. It was also opposed to the use of washing machines in roundhouses, used in connection with cleaning locomotives and tenders. It was claimed that there was discontent among members of the Association believed to be due to wage reductions and other changes in Wage Agreement No. 4,

which provides straight time rates for work performed on Sundays and holidays (other than Labour Day, Christmas and New Year's Day), and takes away the bonus hour per week in exchange for a bonus of one minute for each hour worked.

Resolution were adopted in favour of time and one-half for Sundays and all holidays; time and one-half for time waiting and travelling outside of bulletined hours; punitive pay for millwrights outside of bulletined hours; the re-establishment of twenty minutes for noon hour; nine hours' pay for eight hours' work for night men in roundhouses; overtime rates for actual time of investigation when men on night shifts are required to answer for engine failures or when called in during rest periods; the same privileges with regard to long service passes for members of the Canadian National Lines as are obtained on other roads; that the preference rate enjoyed by the trimmers on the Canadian Pacific Railway be re-instated at the earliest possible moment, and that back time be paid for this class of work from May 22, 1922; that steps be taken to curtail the practice of working members of the Association excessive short time, by the establishment of a minimum month, and also to obtain a

clear understanding upon the subdivision question, and the abolition of the practice of working back shop men on one, two or three shifts concurrently; that all men on the same shift commence at the same time; that an effort be made to obtain a proper classification for truck drivers and chauffeurs; that a clause which prevented the railways from hiring new men to fill vacancies be reinserted in Rule 27; that the seniority of apprentices commence from the day they come out of their apprenticeship. An old age pension system was favoured. A resolution was also adopted urging the drafting of an agreement in simple and direct language that shall be readily understood by the members. By another resolution it was agreed to demand the deletion of a clause in the indenture papers of the Canadian Pacific Railway apprentices employed in Angus shops, which prohibits these apprentices from joining the trade unions. A resolution was adopted protesting against the action of the Canadian Pacific Railway which was reported to have leased engines to the Boston and Maine Railway in an endeavour to break the strike on that railway, and the executive was instructed to take the action deemed necessary in co-operation with Grand Lodge officers in regard to this matter.

---

## TRADE UNION MEMBERSHIP IN CANADA

### Summary of the Information Contained in the Annual Departmental Report on Labour Organization.

THE Twelfth Annual Report on Labour Organization in Canada, covering the calendar year 1922, has just been issued by the department. In addition to setting forth the chief activities of organized labour in the Dominion, with complete statistics on the subject, it contains much information as to the nature of many of the organizations with which the Canadian

organized workers are identified. The peak of trade union membership in Canada, the report states, was reached in 1919, in which year there were 378,047 organized workers in the Dominion. The three-year period following has shown a continual decline, the total loss being 101,426. The reason advanced for the falling off in 1921 of 60,522 members and 250 local branches was

the industrial depression which prevailed not only in Canada but throughout the whole continent of North America, as well as in other countries. The report shows that during the scarcity of employment last year, many members of unions were unable to make payment of the monthly dues, and were in course of time suspended from membership, their names being finally dropped from the records. While a few of the international organizations exempt from the payment of dues for a certain period those members who are out of work, it is understood that with the majority of labour bodies continued membership is contingent upon the regular payment of the prescribed fees. The unemployed situation, though less severe during 1922 than during the preceding year, is reported to be again largely responsible for a trade union membership loss of 36,699 members and 156 branches.

There were at the close of 1922, according to the information published in the report, 92 international organizations operating in Canada, comprising 2,108 local branches, with a reported membership of 206,150. These figures indicate six fewer international bodies than in the previous years operating in the Dominion, with losses of 115 in branches and 16,746 in members.

The group comprising non-international organizations, with 272 branches, a gain of eight, reported a membership of 22,973, a decrease of 1,507. The reported membership of 19 of the 25 independent units was 9,063, a decrease in members of 6,581 and a loss in units of two.

The membership of the 88 National and Catholic unions connected with the Federation of Catholic Workers was reported at 37,576; besides the unions connected with the federation there are 18 syndicates which are not so identified, and of which four reported a combined membership of 759, making the total reported numerical strength of the National and Catholic unions

38,335, a decrease of 6,665 and a loss in syndicates of fourteen, included in the latter being a number of subordinate branches of the Mutual Labour Federation of the North from which no reports were received.

Only one unit of the One Big Union reported, and gave a membership of 100. The general officers of this organization having refused to supply any information, the remaining 33 units which were recorded in 1921 have been deleted from the report. The One Big Union, which was established in 1919, and which at the close of that year reported a membership of 41,150, does not appear to be now a factor in the labour movement of the Dominion. Its membership has fallen off, many of its early advocates having returned to the organizations which they had deserted.

The combined reported membership contained in the five trade union groups above recorded stood, at the close of 1922, at 276,621, comprised in 2,512 local branches.

The chart published herewith, as taken from the report, shows the fluctuations in trade union membership in Canada from 1911 to 1922, the period covered by these departmental annual Reports on Labour Organizations.

By provinces the 2,512 local branch unions of all classes are divided as follows: Ontario, 1,045; Quebec, 456; British Columbia, 235; Alberta, 209; Saskatchewan, 163; Nova Scotia, 147; Manitoba, 134; New Brunswick, 114, and Prince Edward Island, 9.

There are 29 cities in Canada having not less than 20 trade union branches, and between them they represent about 52 per cent of all branch unions in the Dominion. Included in the local branch unions which reported their membership are 22 which have a membership of 1,000 or over, and represent a total of 35,693 members.

The report makes reference to various classes of delegate bodies which have

been developed in the plan of labour organization in North America, some of which are important adjuncts in the labour movement, and are designed to deal collectively with trade and other

matters which are of like concern to all members of the branch unions represented. A chapter of the report is devoted to a discussion of the position of business agent, an office created to

handle trade union affairs where the ordinary officers are unable to give them the desired attention.

The report in addition to giving the numerical standing of labour organizations in Canada, contains information as to trade union membership in 34 other countries, the aggregate, including Canada, being 44,136,355, of which approximately 22,000,000 are adherents to the principles of the International Federation of Trade Unions, with which body the Trades and Labour Congress of Canada, with its 132,071 members, is affiliated. The following are the figures for the various countries as taken from the report:—

Argentina .....	247,953
Australia .....	700,000
Austria .....	1,128,125
Belgium .....	920,000
Bulgaria .....	36,000
Canada .....	276,621
China .....	300,000
Czecho-Slovakia .....	2,000,000
Denmark .....	350,945
Finland .....	48,589
France .....	1,046,748
Germany .....	12,595,947
Great Britain .....	5,128,648
Greece .....	170,000
Holland .....	664,043
Hungary .....	342,577
India .....	500,000
Italy .....	2,099,900
Japan .....	110,688
Latvia .....	50,000
Luxembourg .....	26,466
Mexico .....	710,000
New Zealand .....	82,553
Norway .....	95,927
Peru .....	25,000
Poland .....	822,777
Portugal .....	100,000
Roumania .....	170,309
Russia .....	6,857,000
South Africa .....	91,634
Spain .....	1,305,113
Sweden .....	381,018
Switzerland .....	349,172
United States .....	4,152,592
Yugo-Slavia .....	250,000

The report gives considerable space to a group of revolutionary labour organizations, including (1) The Red International of Labour Unions, (2) The Workers' Party of Canada, and (3) The Trade Union Educational League.

Included in the objects of the first two-mentioned bodies is the "overthrow of capitalism and capitalistic dictatorship", the Educational League being the medium through which the existing labour organizations are to be formed into industrial groups in conformity with the plan of the Red International, upon consummation of which the unions in North America are to be amalgamated with that organization. So far, the report states, the only Canadian organization to adopt the principles of the Red International is the Lumber Workers' Industrial Union of Canada, an independent body, which at one time was an affiliate of the One Big Union. District 26 of the United Mine Workers of America, with jurisdiction over the coal fields of Nova Scotia, made application for membership in the Red International, but the general executive board of the U.M.W. of A. demanded withdrawal of the application on pain of the District being suspended from membership in the United Mine Workers, and the application referred to was withdrawn. The Workers' Party has been active in its propaganda, and in a few localities has made some converts, but the revolutionary character of the organization, which is opposed by the Trades and Labour Congress of Canada, has not appealed to the general labour movement of the Dominion.

Under the caption "Amalgamation Proposals" the report discusses the agitation for closer union through the amalgamation of several of the existing organizations of craft unions into industrial groups, it being claimed by the advocates of the proposal that the present plan of organization is obsolete and lacks the essentials for a united front against the employers. The opponents of the amalgamation scheme claim that the existing system of organization as developed on this continent is as progressive as the present conditions would warrant. The opponents also profess to observe in this movement the machinations of the

agents of the Trade Union Educational League, the organization referred to above. While the American Federation, the head of the organized labour movement of this continent, believes that the trade departments of the federation provide for the bringing together of the existing organizations in such manner as may be determined by them, some of the bodies affiliated to the American Federation have gone on record favouring the proposed industrial group organization.

The report makes reference to the growth of labour political parties in Canada and gives an account of their activities in some of the later elections held in the Dominion. Mention is also made of the participation in politics of the Labour Party of Great Britain, as well as of labour political activities in other countries.

The payment of benefits by labour organizations, the report points out, is a feature of trade union activity of more than ordinary interest, very large sums being expended for this purpose. Of the eighteen organizations classed non-international four made payments for benefits during 1922, the total expenditure being \$41,180, an increase of \$20,405 over the preceding year, of which \$38,450 was for death benefits. Of the 92 international organizations operating in Canada 58 reported disbursements for one or more benefit purposes, payments on account of death benefits being made during 1922 by 53, unemployed and travelling by 12, strike by 42, sick and accident by 19 and old age pensions by 5. The total expenditure in Canada and the United States for benefits paid by the various central international organizations was \$26,378,729, an increase of \$2,288,893, as compared with the disbursements for benefits by 75 organizations which reported for the year 1921. The expendi-

tures for 1922 for the various benefits were as follows:—

Death benefits.....	\$ 8,515,123
Unemployed and travelling benefits.....	753,704
Strike benefits.....	13,549,717
Sick and accident benefits.....	1,446,408
Old age pensions and other benefits.....	2,113,777

Besides the amounts which may have been received from the headquarters of the international organizations, certain of the local branch unions in Canada made payments to their own members for benefits, the total for the year 1922, according to the figures given in the report, being \$535,450, a decrease of \$963,105, as compared with the expenditure for these purposes in the preceding year. The total payments by all classes of local unions on account of the benefits mentioned were as follows:—

Death benefits.....	\$ 121,278
Unemployed benefits.....	48,643
Strike benefits.....	123,693
Sick benefits.....	201,107
Other benefits.....	40,729

The Twelfth Annual Report on Labour Organization in Canada comprises a complete labour directory, containing as it does the names and addresses of the chief executive officers of all labour organizations on the continent known to the department, as well as of those operating in Canada, with a list of local branch unions existing in each locality in the Dominion.

The closing chapter of the report is devoted to a class of associations of employees which, though not identified with the organized labour movement, is deemed of sufficient importance to warrant reference being made to them in a report designed to show the standing of organizations of wage-earners operating in Canada. The number of such associations (none of which have been taken into account in computing the trade union membership in the Dominion) is 63, their combined reported membership being 81,373.

## TRADE UNIONISM IN 1922: A SURVEY.

---

**T**HE International Labour Review for February-March, 1923, contains a survey of some of the principal tendencies of the trade union movement during 1922, illustrated by more or less typical examples. Emphasis is laid upon the purely economic phases of this development, but the author states it is often difficult to distinguish between the economic features and the political activities, particularly so during the past year, as there has been a marked tendency for the trade union movement as a whole to enlarge the sphere of its activities and to extend its power into the field of politics.

The industrial depression, already in progress during 1921, is visible behind almost every phase of trade union activity in 1922, and according to this article, has caused unparalleled unemployment, some reduction of wages, and a successful resistance on the part of employers to any further extension of the 8-hour day movement; in some cases it has meant an addition to working hours. Its immediate effect was a loss in trade union membership, a loss, however, not of such magnitude as to reduce numbers very seriously. The decrease in trade union membership which occurred in 1921, though considerable, nowhere reduced membership to its pre-war level. The growth of the unions during the war was unprecedented; many of them had by 1920 more than doubled their pre-war membership, and some had trebled it. The author expresses the opinion that a large proportion of those who have left the trade unions within the last two years have no doubt done so involuntarily and will therefore return as soon as they are able. A certain number, particularly the new members who joined the movement at the flood tide of prosperity, have, however, left owing to dissatisfaction with trade

union results. Some have been disheartened by the unsuccessful results of strikes. The decrease in the membership of British trade unions since 1920 has been much greater in the case of women than of men; this is attributed to the fact that women abnormally employed in industry during the war, and afterwards during the boom, were among the first to become unemployed when the depression began.

Questions of organization have always come up for consideration at a time of crisis in the labour movement. During 1922 consolidation has been realized to a certain extent by the amalgamation of competing unions in a particular craft; by the conclusion of alliances; by the formation of industrial unions aiming at the "One Big Union", which embraces all the workers in a country; and by the formation of more comprehensive international organizations. The year 1922 is remarkable both for the number of re-organization schemes put forward and the number put into practice. In the United States the idea of industrial unionism is said to have relatively little support, largely because centralisation in the regular trade union movement — through the industrial departments of the Federation — has probably already proceeded further than in most other countries. The 1922 convention of the American Federation of Labour was almost unanimously opposed to the idea. However, eleven State Federations of Labour have passed resolutions endorsing industrial unionism. A strong sentiment for amalgamation, the review states, is noticeable in the printing, textile, clothing and railway industries of the United States, but attempts for joint action by the building trades have met with marked failure.

One of the objects of greater centralization is to form a headquarters for the conduct and direction of strikes. A proposal of this nature was made before the British Trade Union Congress but was not accepted. The conduct of all disputes except purely local ones is part of the new Norwegian scheme. In Germany and Austria the central organizations have succeeded in taking over the control of all strikes of a general nature and the same trend is noticeable in France.

A number of alliances between unions are mentioned. The miners and the engineers in Great Britain have concluded an agreement whereby an engineer employed at a mine is given a miner's membership card, and takes part in strikes and other activities with the miners. In the United States fifteen railway unions have an alliance with the United Mine Workers. In the international field an amalgamation has taken place among the leather workers, saddlers, and shoemakers, while for the building industry a close alliance of the International Federations of Building Workers, Carpenters, Painters, and Stone Workers is under consideration. The general movement for amalgamation and consolidation has affected non-manual workers' unions as well, in Germany especially, but also in France, Great Britain and Italy. They are at the same time moving into closer relationship with manual workers. The evident reason for these developments is that non-manual workers including civil servants, particularly where currency is depreciated, as in Germany, have the same wages problem to face as the manual workers. Further, the wages of civil servants have generally failed to rise to the same degree as those of manual workers to compensate for increased cost of living. Affiliation of civil servants to manual workers' federations has raised the question of the right to strike. This right has been vigorously vindicated by civil servants in France, but in Germany a division of opinion has arisen on this point.

Mention is made of various suggestions for the relief of the unemployment crisis of the past year on the part of the trade unions. They are said to agree fairly well as to the general causes of the crisis, insisting that it lies in the extraordinarily unsound international economic relations which prevail at the present time. Specific suggestions for the relief of the situation have, however, varied, owing to the different traditions and unemployment situations in the various countries. A clear line of difference in attitude can be drawn between that held by labour in Europe and in the United States. European labour accepts unemployment as a more or less inevitable feature of the industrial system. Labour in the United States takes the view that unemployment is a temporary, though malignant influence, which under certain conditions can be wholly abolished. European labour stresses the importance of provision of relief works in time of depression to provide against seasonal variation in employment, and proposes insurance as a relief for that residuum of unemployment which is more or less chronic. The American Federation of Labour, while also emphasising the need and value of the distribution of public contracts so as to provide against cyclical unemployment, opposes unemployment insurance on the ground that it recognises unemployment as something irremediable. The trade union movements of Canada and Australia with a more markedly European tradition have put forward measures for unemployment insurance.

The year 1922 in trade unionism, according to the writer, shows no change in the attitude of organized labour towards migration. Despite the fact, however, that emigration is considered in certain quarters as one of the numerous remedies for unemployment, trade unions even in countries of emigration do not, as a rule, advocate it as a remedy. They insist on the obligation of each country to provide work for its own population. In any case, emigration on a scale sufficient to affect em-

ployment to an appreciable extent might be such as to prevent a rapid recovery when industry should begin to improve. In Great Britain the Labour Party takes the view that "neither in this country nor in the Dominions will Labour regard state-aided schemes of land settlement as a remedy for unemployment". A contrary view of emigration, as a whole, is taken by the trade union organizations in Switzerland and Italy. They look upon emigration as an actual remedy for unemployment, the Italian workers maintaining special information offices to guard the interests of all workers leaving the country. Trade unions in countries of immigration are strongly opposed to it, arguing that it would tend to flood the labour market and increase the number of unemployed, also that it would lower the standard of living.

The effect on the unions of the depression has generally been similar to that resulting in the past from like industrial depressions. At the same time, in the author's opinion, they have also reacted in somewhat new and untried ways. The vastness of the present crisis has impressed the trade unions with the necessity of taking a wider interest in economics. They have realized the difficulty of their position in not being in touch with the sources of information concerning the industrial situation, and their need of informed leadership and counsel. They are insisting on the education of their members and are even reaching out into the field of research and emphasizing the need for a broader understanding of economic and industrial problems. Probably the most significant event in the trade union education movement in

1922 was the holding of an international conference on workers' education at Brussels in August 1922, at which representatives from Australia, Belgium, Czechoslovakia, Denmark, France, Germany, Great Britain, Luxemburg, the Netherlands, Switzerland, and the United States were present. All the organizations represented were connected with trade unions or co-operative societies.

As has been mentioned above, the opinion of trade unions has been that the principal cause of the economic depression, the evils of which are most severely felt by the workers, is to be found in present international economic relations. The principal contribution of labour to the solution of international economic problems is the programme prepared by the International Federation of Trade Unions and submitted by it to the Genoa Conference of the Powers. Side by side with this programme must be considered that prepared by the International Federation of Christian Trade Union for its Innsbruck Congress, as these two programmes correspond on a number of points. The chief remedies which are common in both programmes are: International control of raw material; an international loan for the provision of credits to countries whose currency has depreciated; reciprocal cancellation of war debts; establishment of free trade; reduction of reparations; and disarmament. The League of Nations is generally regarded as the proper instrument for carrying out this programme of economic reorganization, chiefly because it would strengthen the League by bringing it into more vital contact with the immediate economic interests of the peoples.

## BUSINESS CYCLES AND UNEMPLOYMENT

---

**A**T a conference called by President Harding which met at Washington in September, 1921, to consider emergency relief measures for unemployment in the United States, the proposal was advanced that an exhaustive investigation should be made of the whole problem of unemployment and of methods of stabilizing business so as to prevent the suffering caused by trade depression. In accordance with this proposal a committee on unemployment and business cycles was appointed by Mr. Herbert Hoover, Secretary of Commerce, to undertake this investigation. The committee was composed of Owen D. Young, chairman of board of General Electric Company, chairman; Joseph H. Defrees, former president United States Chamber of Commerce; Mary Van Kleeck, Russell Sage Foundation; Matthew Woll, vice-president, American Federation of Labour; Clarence M. Woolley, president American Radiator Company; and Edward Eyre Hunt, secretary of the President's Conference on Unemployment, secretary.

A brief report prepared by this committee has recently been issued (*Business Cycles and Unemployment*, Government Printing Office, Washington, D.C. Price 5 cents.)

In its report the committee uses the term "business cycles" to describe the series of changes in business conditions which are characterized by an upward movement toward a boom, followed by a downward movement into depression. Although a variety of reasons have been assigned for the upward and downward movement of business, it was stated to be the general opinion that the influences which cause the business cycle were conditions within business itself, and that the most productive results in controlling it were likely to be obtained from a considera-

tion of business rather than from efforts to explore remote considerations.

The problem which the committee was asked to analyse was the possible prevention of widespread unemployment through the control of extreme fluctuations of the business cycle. The proposed remedies are: Control of credit expansion of banks generally; possible control of inflation by the Federal reserve system; control by individual business men of the expansion of their own industries; control of public and private construction, including construction by public utilities, at or near the peak of the business cycle; construction of public works in the depression; unemployment reserve funds; federal and state employment bureaus.

The committee attributed business depression largely to ignorance of fundamental facts relating to industry on the part of business men and bankers. It recommended the maintenance and expansion of the monthly survey of current business which had been established in the Department of Commerce by Secretary Hoover, so that business men and bankers might know promptly the facts about the rate of production measured in physical units, the stocks on hand or in transit, the trend of prices, the volume of sales, and the trend in money rates. According to the report there was also need for recording data as to freight movements, to show whether the output of farms and factories was being promptly distributed to the consumer or was being delayed in transit. The committee further recommended the expansion and standardization of the of the statistics now collected by State and Federal Bureaus, the publication of employment statistics by the Federal Bureau of Labour Statistics and the final summation and publication of all these statistics by the Department of

Commerce. The following commodities were suggested by experts as most significant in showing the trend of the business cycle: (1) Raw wool and woollen textiles; (2) Raw cotton and cotton textiles; (3) Hides and leather and shoes; (4) Iron and steel and leading fabricated products, such as structural steel and standard tools; (5) Zinc, lead, and copper and leading products of each; (6) Bituminous coal.

The committee recommended that the statistics with regard to these industries should be obtained by telegraph and should be issued immediately after their receipt. The collection and publication of yearly and monthly statistics was also recommended based on the exhaustive census of manufactures made by the Department of Commerce every five years.

In the opinion of the committee there should be a further development of special research into economic forces, business currents and broad questions of economic method, which should be carried on continuously by government bureaus, but business men themselves should form their own fundamental judgments of probable business trends when adequate data are furnished.

The committee pointed out that the policies of a banker should be determined by the general business situation as well as by the apparent soundness of the particular transactions his customers asked him to finance, and suggested that when prices were rising and business expanding bankers should ask borrowers to maintain an increasing ratio of quick assets to current liabilities. Although it is important that credit should be available at the time of a crisis, it was declared that "it is also important for the general public to realize that the expansion of credit in times of prosperity should be guarded by the voluntary action of

business men, cautioned and advised by bankers to the end that prosperity may be preserved and not destroyed by inflation, which in due course must precipitate depression and deflation with their inevitable consequence of social and economic distress."

The committee recommended the partial control of periods of expansion through the cessation and postponement of construction by the government, railroads, public utilities and private owners in boom periods when prices are high, until a period of depression when prices are low and employment slack. Individual business men and corporations, the report states, should consider the business cycle far more than they do in planning their constructive work. Reserves built up in periods of high earnings and expansion are then spent for construction during periods of depression. This policy would tend to keep low the ratio of fixed assessment to productive capacity to the great advantage of industry.

In discussing the provision of reserve funds accumulated during periods of prosperity to help sustain workers when unemployed in periods of depression, the committee stated that experimentation along these lines had been scanty in the United States, being confined largely to trade unions and to individual efforts of a few firms. Because of the large expense, it appeared fundamental to the success of such experiments that cyclical unemployment should be reduced to its minimum before any general relief measures were attempted. For these reasons and on account of the many complex problems of administration to be solved, the committee did not recommend any definite programme. The committee expressed hearty approval of the recommendation of the President's Conference on Unemployment for the establishment of a

national system of employment bureaus, the reports of which would provide another measure of business conditions, and if organized effectively would enable labour to be transferred from one

place to another with the least possible loss of time, thus preventing loss of production to the employer and loss of wages to the worker, and helping to maintain the level of purchasing power.

## RECENT LABOUR LEGISLATION IN SASKATCHEWAN

SEVERAL measures affecting labour and others of more general social interest were passed at the session of the Saskatchewan Legislature which opened early in February and closed toward the end of March. Penalties were provided for workmen who break their contracts by quitting work before the expiration of the term of service to which they have agreed with their employer. The Masters and Servants Act already contained a section relating to the misconduct of "servants", which class includes clerks, journeymen, apprentices, servants, labourers, or any persons engaged or hired, the list of possible offences on the part of these workers including drunkenness, absence without leave, refusal to perform just duties or obey lawful commands, and dissipating the employer's property or effects. To this list the amendment now adds the offence of "abandoning his (the worker's) employment by leaving his employer's service before the expiry of the term of hiring without the consent of his employer and without lawful excuse". Moreover, in addition to the fine or imprisonment which may be imposed on a "servant" convicted of misconduct, the payment of restitution to the injured employer is authorized by a new subsection, to the effect that "any justice of the peace before whom proceedings are taken under this section may inquire into the damages which a master or employer has sustained, or may sustain, by reason of the violation of contract complained of, and may award as compensation for such damages a sum not exceeding \$100, and any compensation so awarded may be set

off against any sum directed to be paid by the master or employer to the servant or employee for wages".

The section of The Factories Act defining the powers of the Court in cases in which employers are convicted of infractions of the act was redrafted so as to apply to infractions not only of the act, but of "the regulations, rules or orders of the Lieutenant Governor-in-Council thereunder," or "any lawful order of an inspector." In such cases the convicting magistrate (formerly the act read "Court of summary jurisdiction") is authorized to order that such non-compliance be remedied within a specified time limit, which limit may be enlarged upon application. If the regulations have not been complied with by the date so fixed the magistrate is authorized to impose a fine on the offending employer up to \$10 a day. The following section is also added to the act: "The Lieutenant Governor-in-Council may make regulations respecting the prevention of accidents in factories, and generally for the purpose of carrying out the provisions of this act according to their true intent and meaning and of supplying any deficiency therein."

The Pharmacy Act was amended by the raising of the age at which intending apprentices to a pharmaceutical chemist may be registered from 15 to 17 years.

The section of the Creditors' Relief Act which provides that employees' claims for wages have priority over other debts was amended to provide that on receipt of such claims the

sheriff shall immediately give notice to the execution debtor "and shall have the same right to interplead in respect thereof as he would have in case of any adverse claim to moneys levied by him under execution."

The Hawkers' and Pedlers' Act was amended by the addition to the list of persons to whom the provisions of the act do not apply of persons selling typewriters, adding machines and computing scales. A similar amendment is made in the City Act, the Town Act, and the Village Act. In the latter Acts the employees of merchants were also exempted from the regulations governing pedlers.

The following measures may be mentioned among those of a more general social nature which were enacted at the recent session. A Department of Public Health was created, its duties being to administer the Public Health and other related acts, to collect facts

and statistics relating to public health and disseminate information tending to promote health and suppress disease, to secure the observance of all acts and regulations connected with public health or vital statistics and to issue such reports, statistics, circulars and other publications as may be advisable, officials of public institutions, medical health officers, boards of health, municipalities, school boards and medical practitioners will be subject to the authority of the new department.

Following the recent example of British Columbia, the Legislature passed a Parents' Maintenance Act making sons or daughters liable for the support of parents who are dependent upon them by reason of age, disease, or infirmity. Provision was made for the establishment of an industrial school for the education, industrial training and moral reclamation of such boys as may be lawfully committed for detention at the schools.

## WORKMEN'S COMPENSATION IN NOVA SCOTIA AND NEW BRUNSWICK IN 1922.

**T**HE Workmen's Compensation Boards of Nova Scotia and New Brunswick recently issued their annual reports, covering the calendar year 1922.

### Nova Scotia Report

The report of the Nova Scotia Workmen's Compensation Board shows that the actual payments made during the year for compensation and medical aid amounted to \$516,290. Of this amount \$303,552 was paid to disabled workers and \$212,738 was paid to persons entitled to pensions. The number of disabled workmen who received benefits in respect to temporary total disabilities continuing for at least seven days was 4,256, while at the end of the year the persons receiving compensation in the form of a monthly pension were as follows:

Widows. ....	250
Children under 16.....	556
Dependent mothers.....	40
Dependent fathers.....	34
Other dependents.....	15
Workmen partially or wholly disabled for life	530

The Province's bill for accident compensation has not varied widely in the past six years in proportion to the total volume of industrial activity, the ratio of expenditure for this purpose to the total wages paid in each year ranging from .026 in 1918 to .015 in 1921 and .020 in 1922.

The total provisional assessments made upon employers in 1922 amounted to \$815,317. Substantial reductions, however, due to the decrease in the amount of wages actually paid as com-

pared with the amount estimated at the beginning of the year, and to the retroactive decrease in the rates of assessments, were expected to bring this total down to \$667,117. For the first time in six years of experience the Board made an allowance for bad accounts, an excellent record, considering that, unlike a private insurance company, the Board cannot select its risks or require advance payments on policies, but must provide compensation even when the employer has not reported, or is discovered to be worthless.

The amount invested by the Board in trust fund securities amounted to \$3,789,182 at the close of the year, the securities consisting of Dominion and Provincial bonds. The ratio of administrative expenses to total expenditure was 10.56 per cent in 1922 or practically the same proportion as in the previous year.

A remarkable similarity is noticeable in the accident figures for the past two years. In 1922 the total accidents, so far reported, were 5,434, as compared with 5,423 in 1921, while fatalities numbered 63 in 1922 and 62 in 1921. Permanent disability cases were rather more numerous, but temporary total disability cases were fewer last year than in 1921. The Board expresses satisfaction with the work of the Nova Scotia Accident Prevention Association, to whom \$7,970 was paid during the year for expenses. Medical aid, which is provided by the Board for a period of 30 days from the date of disability, involved a heavier outlay than in 1921, the increase in 1922 amounting to nearly \$2,000. This increase is explained by the discontinuance of several private medical aid systems which were recognized and allowed to function under the terms of the compensation act amendment relating to the provision of medical aid.

#### New Brunswick Report

The report of the New Brunswick Workmen's Compensation Board for

1922, in addition to giving all available information as to last year's operations, contains full tables for 1921 which are designed to bring the reports of the province into conformity with those of the other provinces, so as to provide a true basis for statistical comparison. These revised tables show receipts from actual assessments and cost in each industrial group of all the "finalled" claims of 1921; the month of occurrence and locality of accidents, the time loss involved by groups, the average age and the average wage of the injured workers by groups, the average length of temporary total disability, the nature of injury, the causes of accidents; dependants provided for in fatal cases, and the number of accidents involving disability of less than seven days.

The figures for 1922 show a slight increase in the total number of accidents during the year for which claims were filed, being 5,216, as compared with 4,834 in 1921. However, a decline was noted in the number of more serious cases, the increase referred to being mainly in minor accidents, that is those causing disability of less than seven days' duration.

The provisional financial statement for 1922 shows that the sum of \$258,306 was collected in assessments on estimated payrolls; \$133,853 was expended on compensation other than pensions; \$52,086 was expended on medical aid; \$16,320 on hospital maintenance; \$118,415 was transferred to Pension awards. The cost of administration is given as 10 <sup>3</sup>/<sub>5</sub> per cent of the total income of the Board from all sources, including interest on current funds, estimated adjustments on 1922 payroll, and balance carried over from the previous year.

First aid classes were held during the year in the principal industrial centres, and instruction was also given in the outlying districts of the province.

## FACTORIES INSPECTION IN NEW BRUNSWICK.

---

ONE of the duties of the Workmen's Compensation Board of New Brunswick it to administer the Provincial Factories Act, the chief Factory Inspector being required to present to the Board an annual report giving details of all infractions of the law and other matters affecting factories which have been brought to his attention during the year. The report for 1922, completed in February, but issued, as is customary, only on the termination of the Legislative session, shows that 368 industrial establishments, employing 12,824 male, and 1,954 female workers, were inspected. Many more sawmills were in operation than in 1921, a gradual return to normal conditions in the logging industry being indicated, and industries generally were more active. The report notes a speeding-up of the output in many of the larger establishments, accompanied by an increase of security for the workers, due to the replacing of old machinery with the latest type, and to the fact that manufacturers of machinery now generally equip their latest productions with safety devices before shipping. The inspector in fact finds no small proportion of accidents due to carelessness, indifference, inexperience or lack of reasonable judgment. "It is just as essential," he says, "that the worker should exercise care and caution in the course of his employment as it is for the employer to provide and instal safety devices". Again, after referring

to certain practices by workers, such as the wearing of loose clothing round machinery, the inspector proceeds: "It does seem to me that before we can hope for any appreciable reduction in the number of accidents something must be done to discourage these and similar pernicious practices indulged in from day to day by employees. It is the direct cause of 75 per cent of the accidents in connection with equipment". It is suggested that "Safety First" notices be prominently posted; that workers who unnecessarily expose themselves should be informed of their risk; that new hands be made aware of the dangers surrounding them; that "safe" clothing be worn by employees; and that the millwright or some other responsible person make periodical inspections of the plant with a view to safety.

The inspector suggests amendments to the Factories Act to extend its application to owners or users of all boilers, and not only to those employing ten or more persons and to restrict the sale or purchase of second-hand boilers.

One thousand and one licenses were granted during the year to stationary engineers for operating steam plants carrying a pressure over 15 pounds. Of this number 860 were renewal licenses, issued annually by the Workmen's which are issued annually by the Workmen's Compensation Board.

## APPRENTICESHIP IN THE BUILDING TRADES.

---

**K**EEN interest, on the part of both employers and employees, is being shown concerning the problem of securing an adequate supply of apprentices for the building and construction industry. The urgent need for immediate action in this matter was clearly presented by Mr. J. M. Pigott, President of the Association of Canadian Building and Construction Industries, in a paper read before the fifth annual conference of the Association held in the city of Quebec last February. This paper, which appeared in the March issue of the *LABOUR GAZETTE*, pointed out the failure of existing methods of training skilled workers in the building trades, resulting in a serious shortage of competent mechanics, and outlined a proposed plan for reviving apprenticeship in the seasonal occupations. The proposed plan involves the establishment of a provincial apprenticeship board and the assessment of all employers in the building industry for the purpose of paying the wages of apprentices during the first two years of their training. During the remainder of the training period the apprentice would be paid by his employer. This new assessment, which would amount to approximately 90 cents per \$100 of the payroll, would be levied in the same way as the assessment for workmen's compensation, which is approximately \$1.80. Throughout the full apprenticeship period the boy would spend seven consecutive months on the job under the supervision of a local apprenticeship board and five months in a technical school during the winter.

It was suggested that for the first two years of operation the provincial and federal governments should each contribute an amount equivalent to that levied on employers, thus reducing the employers' assessment to approx-

imately 30 cents. A deputation composed of representatives of the Association of Canadian Building and Construction Industries and of the international building trades unions waited on the Dominion Government for the purpose of requesting the co-operation and assistance of the Dominion government. Efforts are also being made through the Ontario Employment Service Council to prepare a bill for presentation to the legislature which will authorize the establishment of a provincial board with power to assess employers and control the apprenticeship scheme.

The plans for putting the scheme into operation are still in the formative stage and it will be some time before the work of training apprentices under the proposed scheme can be commenced. The situation is one which requires close co-operation amongst employers, labour organizations and technical schools. There is a growing opinion, on the part of many interested persons, that the problem of apprenticeship can best be solved by industry and that future developments should result from earnest efforts on the part of employers and employees to co-operate in devising ways and means for establishing local apprenticeship plans in different trades. These may later be amalgamated into a provincial scheme for the whole building industry. Others believe that the time has come for establishing provincial apprenticeship schemes involving all trades and skilled occupations, and that legislation should be enacted to provide for the above plan, or a modification of it, being established in all branches of industry now covered by the Workmen's Compensation Acts. It would appear that employers in the building trades are not yet prepared to assume the responsibility and cost of training apprentices,

and that very few boys are willing to serve a term of apprenticeship until some provision is made for providing adequate training, assured wages during the full year, and a prospect of steady employment on completion of the training period. Steady employment cannot be assured while the building trades continue to be seasonal occupations, and the public are not yet convinced that construction work can be carried on throughout the whole year without adding to the cost of operation. It is claimed by some builders that if the work were equally distributed over the twelve months instead of being confined to the period of good weather, building costs would be considerably decreased, although there would still be a difference between the cost of summer and winter construction in some lines of work.

The plan proposed by Mr. Pigott has met with the approval of organized labour, and the technical schools are willing and anxious to co-operate by providing special courses for apprentices, and, if necessary, supervising the training received on the job. One of the main objects of secondary vocational education as expressed by Dr. F. W. Merchant, Director of Technical Education for Ontario, is to promote some form of apprenticeship in skilled occupations and to co-operate with industry in providing suitable training for apprentices. The vocational schools cannot replace apprenticeship but they can and should provide a preliminary training for young students who intend to enter industrial occupations and later supplement the training received on the job by special instruction designed to meet the needs of various kinds of workers and apprentices.

The preliminary training may consist of instruction in—

- (a) The essentials of a general education,
- (b) Subjects which are fundamental to most industries, such as mechanical drawing, shop mathematics, mechanics, etc.
- (c) Practical work of a general character in different trades.

The supplementary training for apprentices and adult workers may consist of—

- (a) Extension of academic courses where such extension is necessary,
- (b) Systematic instruction in the knowledge related to different trades. Every trade has a body of such knowledge which it is necessary that the apprentice should acquire.
- (c) Training to give skill in the mechanical operations of trades in so far as such training can be given in schools.

This training can be continued throughout the year in part-time classes for a few hours each week, or it can be given in the case of seasonal trades, through full-time courses in the winter months.

The attitude of labour organizations is expressed by Mr. J. F. Marsh, General Representative of the United Brotherhood of Carpenters and Joiners, who referred to the proposed plan in the following words:— "The trades unions are anxious to assist in any way they can, to bring into effect an apprenticeship plan that will be mutually satisfactory. The plan suggested by Mr. Pigott is a step in the right direction and deserves the commendation and support of the contractors, the building public, the federal and provincial governments and the trades unions."

## VOCATIONAL EDUCATION IN PRINCE EDWARD ISLAND.

THE closing exercises of the provincial Agricultural and Technical School in Charlottetown, held on April 12, marked the end of the third year of vocational education in Prince Edward Island. The school, which was opened as a result of federal assistance under the Technical Education Act, is endeavouring to meet the vocational needs of students from all parts of the province and offers courses in agricultural and industrial work. New courses are being added to meet the increasing demand for vocational training, and it is expected that the day courses now being given in agriculture, motor mechanics and butter and cheese manufacturing will be increased to include lobster packing, fox raising and other courses directly connected with the industries of the province. The evening courses given during the past year included motor mechanics, mechanical drawing, woodworking, wireless telegraphy, mathematics and English. These courses also will be added to as the need arises. The total enrolment last year was 172, 65 in the day classes and 107 in the evening, which is a considerable increase in both departments over the enrolment for the previous year. Vocational education is a new development in Prince Edward Island and its field is limited, but the school is meeting a real need and is being recognized as a permanent and useful institution by those who were indifferent or opposed to its establishment. The growing interest on the part of the general public and the business men of the province is shown by the large attendance at the convocation exercises, and the five prizes which were offered for competition in the different courses. In his address to the gathering, Mr. Vernon Crockett, principal of the school, very clearly summarized the work of the school and pointed out the need for enlarging its activities. The

following extracts from his speech indicate the spirit of the school and the prospect for future developments:—

There are those who say that the young people of this province do not need vocational education, that they are better off without it, that education unsettles people, and makes them restless and dissatisfied with themselves and that eventually they leave home and are a direct loss to the province. Our reply to that contention is that it is directly contrary to the facts. It is not the skilled workers who leave home but the unskilled. Vocational education does not depopulate the country. It has the opposite effect. The students of this institution do not leave the province as soon as they finish their course here. They go back home and are incorporated into the agricultural and industrial life of the country. Statistics from Truro Agricultural College, the Ontario Agricultural College and Macdonald College, St. Anne de Bellevue, bear out our contention. The vast majority, a very large percentage, almost all of the graduates of these institutions identify themselves with the agricultural and industrial and social life of the Dominion. Vocational education is also meeting with opposition on the ground of its excessive cost. What does it cost? Making necessary deductions for capital expenditure the total annual cost of running this institution is less than \$12,000, a year, of which amount the Federal Government pays \$8,000. Towards the maintenance and upkeep of this school the total annual levy on each taxpayer of this province is approximately thirty cents. That does not seem to be excessive. I do not think it is costing enough. I wish I could point out to you, as I feel it myself, the tremendous importance of this school in the development of the resources of this province. Once that conviction gets possession of us the question of cost will become a matter for secondary consideration. Just think what it would mean to this province if we had two hundred young men of the same quality as those who are graduating this evening studying scientifically the various problems connected with our agricultural, and industrial and social development. I am not talking about what we have already accomplished. I am thinking about the possibilities which are tremendous. To make this thing a success will cost a little more than it is costing at present, and it is just here that vocational differs from ordinary secondary and high school education.

Technical education means work shops, and laboratories, and facilities for practical demonstrations. Vocational education means doing things, not merely talking about or thinking about doing them. Our motor mechanics here can take your car, tractor or gas engine all to pieces and put it together again. If there is anything wrong they can put it right. They didn't learn that from a textbook. They couldn't learn it from a textbook.

Our dairy students can take your cream, test it, pasteurize it, churn it, pack the product and put it on the market in first class condition. In texture, flavour, and keeping quality it will be as good as the best. But it costs money to equip an institution to do this kind of work. I am not asking for more money. I am only trying to point to some of the difficulties and I want to insist on the extreme importance of getting the right viewpoint on a question that vitally concerns the future welfare and prosperity of this province.

Agriculture, we have learned, is the basic industry in this province, and of that industry dairying is the most important sub-division. That is why a dairy herd is kept on the school premises and a fully equipped cheese and butter plant is being operated at the school. We give our students a thorough insight into every phase of the business from the production of the raw material to the marketing and consumption of the finished product. They learn to appreciate above everything else the necessity for absolute cleanliness in every department of the dairy business. Last autumn a prominent dairyman at the Provincial Exhibition created consider-

able amusement in a section of the grand stand by appearing in the live stock parade dressed in a white laundered suit. A white laundered suit is the official dress of dairymen in Denmark and in other countries where dairying has been elevated to the status of a fine art.

There is just another matter to which I should like to refer before I finish. There is an idea abroad that vocational education is a matter that concerns the country alone. That is wrong. On this question of vocational education the city and country are one. There are hundreds of young people in this city between the ages of 14 and 18 who would be greatly benefited by such instruction as this school is capable of giving in either day or night classes. I suggested recently that an economic survey should be made of this city, to find out how many boys and girls between the ages of 14 and 18 are attending educational institutions, how many have gone to work for themselves, how many are following blind alley occupations, how many are apparently doing nothing. This survey might be followed by legislation providing for part time day or night class instruction for such of these as have gone to work and wish to avail themselves of the opportunities afforded. This is the plan being followed by all countries where an efficient system of secondary education is considered of first importance. Students whose efficiency has been increased by attendance at these classes might be given a slight increase in wages or salary by their employers to compensate them for the necessary trouble involved. I hope the city will take this matter in hand and that attendance at night classes particularly will be largely increased next winter.

---

## ACCIDENTS AND ACCIDENT PREVENTION IN MINES OF VARIOUS COUNTRIES

FROM time to time articles have appeared in the LABOUR GAZETTE in which reference has been made to recommendations and regulations for the improvement of safety conditions in mines. Among these may be mentioned "Mining Accidents in Ontario" and "British Columbia Coal Mine Regulations" in the issues of April and March, 1923, respectively, and the "Report on Disaster in British Columbia Coal Mine" in the issue of October,

1922. Particulars with regard to mining accidents in Canada, as prepared by the Department of Labour, are contained in "Fatal Industrial Accidents in Canada, in 1922" in the issue of March, 1923. The following information deals with accidents and measures and suggestions for the promotion of safety in the mines of Great Britain, United States, France, and South Africa.

## Great Britain

A committee has recently been appointed by the British Secretary of Mines, under the chairmanship of Sir Richard A. S. Redmayne, K.C.B., to prepare under the direction of the Safety in Mines Research Board, a scheme for investigating possible methods for reducing the number of accidents from falls of ground in coal mines and to consider arrangements to carry out the proposed scheme.

On March 13, 1923, Mr. George Barker, a member of the Labour Party and a miners' representative, moved a resolution in the British House of Commons deploring the heavy loss of life and the large number of non-fatal accidents in mines, and recommending legislation to improve and strengthen the provisions of the Coal Mines Act, 1911, in order to secure the fullest protection possible to those engaged in the industry. He quoted figures to show that for the four years ending December 31, 1921, the average annual number of fatalities was 1,125 and the number of persons disabled for more than seven days was 107,969; and for the ten years ending 1921 the total number killed in the industry was 12,897. During 1922, according to figures obtained from the Secretary of Mines, the number of accidents resulting from various causes was as follows:

	Killed	Seriously injured
Falls of roof and sides..	548	1,911
Haulage accidents below ground. . . . .	212	1,127
Explosions of fire damp or coal dust. . . . .	73	123
Explosions due to shot firing. . . . .	17	297
Shaft accidents. . . . .	40	97

Mr. Barker suggested the sinking of a shaft where the working face exceeded one mile from the shaft, claiming that this would lessen haulage costs and the number of accidents, and that the ventilation of the colliery and the health of the miners would be improved and the risk of explosion and

the quantity of coal dust on roadways would be reduced. He also suggested that if vacant places were stowed with the rubbish at present brought up and dumped on the surface, the space for accumulation of gas would be reduced and subsidences and falls of roof prevented. Many accidents, he claimed, were caused by the overworking of pit ponies, and he drew attention to the treatment of these animals in the pits. He urged that the greatest possible encouragement be given to miners who invent appliances for reducing mine accidents claiming that an appliance was on the market which, if universally adopted, would practically abolish accidents due to shot-firing; that the lighting of mines should be improved so as to diminish the prevalence of nystagmus and at the same time reduce the number of accidents; that the present system of inspection could be improved by increasing the number of inspectors and publishing their reports. He condemned economies effected in recent years in the administration of the Mines Department and enquired whether the Safety in Mines Research Board was not being hindered in its work on grounds of economy.

Mr. Harper Parker, who seconded the motion, urged an amendment to the Act to provide for some control of the speed at which the men shall be lowered into or raised from the mines and suggested periodical inspection of over-winding apparatus and that the winding-engine man should never be given any other work which would interfere with close attention to his winding duties.

This resolution was agreed to, as the Government realized the importance of expressing the opinion that the House regarded accidents to life and limb with feeling. It was explained, however, that the Secretary of Mines might by Order make such general regulations for the conduct and guidance of those managing a mine or employed in or about mines as may appear best, and provide for safety and

health, for proper inspection and for the care and treatment of horses and other animals.

A few days later the Secretary of Mines announced the appointment of a committee to investigate the existing arrangements for the provision and maintenance of appliances for use in rescue work, for the training of rescue corps and brigades, and to report what steps, if any, should be taken to improve these arrangements by amendments of the law or regulations or otherwise.

#### United States.

The American Association for Labor Legislation is urging that protective legislation be strengthened (1) to safeguard mine inspectors against partisan interference, whether political or industrial, and to place them upon a basis of training and experience; and (2) to offer, through workmen's compensation laws, inducements to careful employers who reduce hazards by proper safeguards.

Reports from the United States Bureau of Mines indicate that in ten years there have been 23,979 coal miners killed in the United States. In a comparison with British fatality rates, a report states that in the ten years (1911-1920 inclusive) the average fatality rate has been 1.2 for every 1,000 men employed in Great Britain and 4.3 for every 1,000 theoretic 300-day workers in the United States; that in 1920, the last year for which comparable figures are available, the British rate was 0.80 as compared with 3.77 in the United States, the fatalities numbering 1,103 in Great Britain and 2,271 in the United States. Because of differences of conditions in the two countries, it is claimed, however, that it is difficult to compare the frequency of mine accidents. In the coal mines of Great Britain there are about 1,000,000 men employed, which is approximately one-third more than in the United States, and the yearly output is about

300,000,000 tons, which is less than half the production in the United States.

During 1922, a slight reduction is shown in the number of coal mine fatalities, but in relation to the quantity of coal produced the accident rate was higher than for 1921. Owing to a strike from April to August, 1922, the production of anthracite was completely stopped and the output of bituminous coal was cut to half its usual quantity, and during these months there was an abnormally low number of fatal accidents. A summarization of the year's record shows 1,967 fatalities, a reduction of 20 from the previous year. Nine hundred deaths, or about 50 per cent of the accidents resulted from falls of rock or coal. There were 11 "major" disasters, (at which more than 5 lives were lost) due to explosions, causing the death of 264 men, and in 1921 there were five "major" disasters with a loss of 34 lives. The following table shows the death rate per million tons of coal due to principal causes, as follows:

	1922	1921
Falls of rock and coal.....	1.955	2.023
Haulage accidents. ....	0.736	0.637
Gas and dust explosions.....	0.675	0.229
Powder and other explosives...	0.196	0.300
Electricity. . . . .	0.159	0.158

The rate for all classes of accidents in 1922 was 4,273 per million tons, as compared with 3,924 in 1921.

The Bureau claims that probably the most important factor started in 1922 for promoting safety in mines was the holding of sectional safety conferences for mining men interested in safety. This work was initiated and carried on by the Mining Section of the National Safety Council. Other improvements noted that have a direct bearing on safety are: The substitution of storage battery locomotives for trolley locomotives, the replacing of dry drills in mines with wet drills, and the installation of larger and better ventilation equipment. Improvements were made in the mechanical safeguards for

hoisting, and in the work of fireproofing shafts. During the year ending June 30, 1922, the two mine rescue cars and ten safety stations of the Bureau trained 13,253 men in first-aid, 1,106 in mine rescue, and 1,930 in combination first-aid and mine-rescue work. It also described mine safety and mine rescue work to 86,899 persons, rendered assistance at 24 mine accidents (20 in coal mines and 4 in metal mines) conducted and assisted in conducting 26 state, local and company first-aid meets in mine districts, inspected mine rescue apparatus and gave advice as to its condition and repairs needed; investigated and made recommendations concerning mines in which explosions or fires occurred; produced and distributed free, for educational purposes, motion picture films on subjects relating to mining and the health and safety of miners; formulated a code on procedure in mine rescue, and assisted in an International Conference to reach standardization in mine rescue apparatus throughout the world. Co-operation in the work was maintained with the United States Public Health Service and the National Safety Council. Practically half a million dollars per year is expended by the Bureau. The following hints to miners are contained in a bulletin issued by the Bureau, setting forth methods to be used in case of fire or explosion, where men are trapped in the workings.

1. When entrapped by gases and forced back into a crossect or drift in which is comparatively good air, keep in mind the thought of building a bulkhead and collect tools, timber, water and other necessities on the way.

2. Before constructing a bulkhead, make sure that there is no manway or other connection with another level through which fumes could come.

3. When erected, test a bulkhead for leaks by means of a candle or carbide lamp.

4. If there is a compressed-air pipe with hose attached leading into the drift, and gas is coming in during erection of the bulkhead, station a man blowing air to keep back the gas.

5. Use a minimum of light when in a bulkhead region, as these consume oxygen.

6. The burning of the flame of a candle or lamp will show the condition of the confined air and how the oxygen is being used up.

7. Keep moving in the drift as much as possible, so as to mix the air, and do not gather in one place.

8. A bulkhead drift 250 feet long and 6 feet high by 6 feet wide contains 9,000 cubic feet of air, and at the disastrous fire in the North Butte Mining Company's Granite Mountain shaft, kept 29 men alive for 36 hours; and one 130 feet long and 7 feet high by 7 feet wide, containing 6,500 cubic feet, supported 6 out of 8 men for 50 hours, and would have sufficed for all 8 men for 65 hours if the air had been circulated by moving about.

#### France.

By an Act of July 8, 1890, amended by the Acts of March 25, 1901, and May 9, 1905, and incorporated in Book II of the Labour Code, sections 120-157, provision is made for the appointment of safety overseers (*délégués à la sécurité*) to visit underground works in mines and quarries and investigate hygienic conditions and provisions for the safety of the workers employed. A Bill has recently been introduced, proposing that this legislation should be extended to cover surface workers in mines. It is pointed out that operations of the most varied nature are now carried on at the surface of coal mines, and that in some cases the most elementary precautions for the safety of the workers are not observed. Mr. Richard Georges, who introduced the

bill, quoted recent statistics which show that the number of accidents to surface workers in 1919 was 7,717 (of whom 32 were killed) out of 60,549 workers, as compared with 6,697 (45 killed and 6,652 injured) out of 56,215 workers in 1911. He also emphasized the importance of protecting the health of the workers, who are exposed to all sorts of diseases (particularly the women workers).

#### South Africa

During recent years a "Safety First" campaign has been conducted on the Rand Mines under the auspices of the Rand Mutual Assurance Company. The following figures show the fatal accident rates per 1,000 persons employed in the years 1915 to 1921 inclusive: 1915, 3.17; 1916, 3.16; 1917, 2.64; 1918, 2.55; 1919, 2.43; 1920, 2.45; 1921, 2.28.

### REPORTS OF CANADIAN NATIONAL SAFETY LEAGUE AND THE ONTARIO SAFETY LEAGUE.

THE Ontario Safety League recently issued its ninth annual report which contains also the fourth annual report of the Canadian National Safety League. The former League is a member of the Dominion organization and has charge of the work in Ontario. A similar organization exists in Manitoba, and in Quebec there is the Shawinigan Falls Safety League which is affiliated with the National League.

During the year the National League gave serious consideration to the question of organizing in every province throughout the country, and in that connection a delegation interviewed representatives of the Federal and Provincial Governments during September, 1922, when a conference was being held in connection with the unemployment situation, at which it is reported they were assured of the sympathy and co-operation of the Minister of Labour and of the Minister of the Department of Soldiers' Civil Re-establishment. Later another deputation accompanied by the Hon. James Murdock, Minister of Labour and Mr. Tom Moore, president of the Trades and Labour Congress, interviewed the Hon. Mr. Fielding, Minister of Finance with reference to a financial grant to assist in organizing the provincial organizations. It is reported they were successful in so far as the Government

has placed the sum of \$25,000 in the estimates for this purpose.

The receipts of the Ontario League for the year 1922 amounted to \$24,225 including a grant from the Province of \$10,000, grants from the city of Toronto for the years 1921 and 1922 of \$2,000 for each year, and membership fees and general collections amounting to \$10,225. The expenditures for the year amounted to \$23,830 of which \$12,830 was for general campaign work and \$11,000 for office expenses. In addition to this supplies to the Canadian National Safety League amounted to \$859.

Included in the work of the Ontario League is the fortnightly distribution, to paid subscribers in 68 of the cities and towns of the Province of bulletins dealing with industrial hazards, some of which deal with specific hazards while others discuss safety measures from a broader viewpoint. A safety show was conducted at the Canadian National Exhibition at which were displayed guarded punch presses, cutting machines, belt guards, safety cabinets and goggles, as examples of means of providing industrial safety. A feature unique as a life saver was a safety window which enables both the upper and lower sash to be cleaned from the inside of the building. The Safe Drivers' Club which was organized during 1921

had a membership of 435 at the end of the year, and a mailing list of 3,200 names, covering 600 cities, towns and villages in the province. Special attention was also given by the League to work in connection with the electric railways, one feature of which was the posting of large bulletins on the backs of street cars. A play, "Fixing the Responsibility for an Accident" was staged twice at Massey Hall, Toronto, on January 14, the afternoon session being for school pupils and the evening for adults. This play is reported to have been a wonderful success in the impressions made upon the minds of the people. In the work among school children \$200 and \$320 respectively

were distributed in connection with an essay contest and a cartoon contest, and 300 sets of patrol badges were issued to older children who have been organized to look after younger ones on the streets. In summarizing the work of the League it is stated that the ninth year of safety work was completed with 60 fewer fatalities in Toronto than in 1913, the year immediately before the work started, in spite of an increase in population of 91,000, with its increased proportion of industrial hazards and an increase of 32,000 in automotive vehicles. It is claimed that there has been a saving of 759 lives in the nine years of safety work.

---

## INDUSTRIAL HYGIENE IN RAG SORTING AND SHREDDING

**I**N August 1922, the Federal Factory Inspector for the First District in Switzerland approached the International Labour Office (League of Nations) asking for information as to the danger to which women workers were exposed in the processes of rag sorting and shredding in paper factories or in factories which sort and shred rags for the paper manufacturing trade. On behalf of his Department he asked for communication of any information as to these processes in other countries and as to means taken to avert the risks involved, stating at the same time that in his opinion the usual exhaust system for the removal of dust did not provide adequate protection.

The International Labour Office consulted some of the members of the Advisory Committee on Industrial Hygiene of the International Labour Organisation, which is an international committee of medical and hygiene experts appointed in 1921 to advise on questions of industrial hygiene and industrial disease. A report was drawn up by the Industrial Hygiene Service of the Labour Office on the basis of the information received, and the main

features of this report, supplemented from medical literature on the subject, have been summarized to form an article in the *International Labour Review* of February-March, 1923, of which the following is a brief digest:—

Rag picking, sorting and shredding are old-established occupations in which the majority of the workers are women. Rag picking, strictly speaking, is merely the preliminary process of collecting the rags from house to house or from the accumulated contents of dust-bins. The wholesale rag dealers have large establishments and often employ a large staff, who sort and clean the rags. The various kinds of material, namely, woollen rags, cloth, merino, knitted goods, etc., are dealt with in separate rooms. The rags are sorted on wired tables so that the dust still adhering to them may be removed.

Whether the rag picker's occupation as such, as distinct from rag sorting and shredding, is deleterious to the health of the worker, is an open question, as also whether there is any risk for the population living in the near neighborhood of rag pickers' quarters;

complaint is, however, invariably made of the smells which arise from such quarters and from refuse depots. Occupational risk appears as soon as the rags begin to be handled in detail, and is the same throughout, arising from the uncleaned state of the rags, and from the dust which they hold. As the process of sorting, i.e., handling, begins even with the rag picker and continues through all stages until it passes into the final process of shredding, which is itself no more hygienic than sorting, whatever risk there is is pretty well continuous throughout the trade. In theory it would appear that rag pickers must be liable to contract infectious diseases and diseases which are due to parasites. More recently, however, this opinion has been contested, and it is held that the danger of contagion, though present, has been exaggerated. Progress in sanitary measures and the increasing adoption of disinfection processes must obviously lessen risk. They cannot, however, wholly eliminate it.

The work of sorting consists in tearing up the rags, classifying them in grades according to their material (linen, cotton, wool, etc.), colour, or thickness, and removing all buttons, buckles and hooks, if they are not made of animal or vegetable fibre. The work is carried on simultaneously with the operation of shredding, which operation consists in dividing into strips cotton or linen rags which subsequently go through the cutting and the willowing machines, and are then boiled. A certain amount of dust remains in the rags although they have been previously thrashed, and this dust is liberated by the operation of shredding and flies up round the worker. Rag-shredding rooms are well known to be unhealthy in many respects. The amount of dust liberated is enormous. The atmosphere in rag-shredding rooms is full of thick, clinging, and evil-smelling dust, which settles thickly on the walls, the floors, the furniture, and the workers' clothes. At all times of the year, but particularly in summer, dust settles on the hands

and faces of the sorters, and combines with their perspiration to form a sort of paste. The workers generally cough a great deal but this ceases as soon as they leave the place of work. Clouds of dust rise in the air, even when rags are simply sorted, but still more dust is caused by the work of shredding or tearing rags, removing buttons, etc. In some workrooms the dust is so thick that the workers cannot breathe unless they tie a cloth or sponge in front of their mouths and noses. The amount of dust produced varies very considerably according to the nature of the rags. Old clothes produce an immense amount of dust, while new scraps from the dress-making and clothing industry cause very much less. The feature which gives rise to the principal risk in the rag sorting and shredding trade is, beyond doubt, an excessive quantity of dust, and the principal aim of sanitary measures should be to prevent this condition. The possibility of contracting infectious disease is far less important, although at first sight such diseases liable to have a fatal termination might appear the greater danger. The principal infectious diseases liable to be contracted are smallpox, anthrax and erysipelas. The disease which used to be known as "rag sorters' disease" and which often proved fatal has been shown by bacteriological examination to have been anthrax. Industrial disease statistics appear to show, however, that at the present time cases of anthrax in the rag industry are rare. Some other infectious diseases are also infrequent, as their germs lose their vitality by dessication if the bales of rags are stored for a long time without being opened, which is frequently the case. The bacteria of anthrax, tetanus, and erysipelas, however, are able to spore and may thus retain their vitality for years. General factory conditions naturally have an important bearing on disease frequency. Contrary to what might have been supposed, medical inspectors of factories state that this oc-

cupation has given them much less trouble than they expected. The installation of exhaust apparatus on each dusting machine and the sorting and shredding tables has given most satisfactory results, and has reduced the danger which previously existed to a minimum.

The article goes on to give a brief record of what has been done in the way of investigations in the occupation of rag-sorting, together with the legislation enacted in some of the principal countries of Europe and the United States.

## RECLASSIFICATION OF UNITED STATES CIVIL SERVICE

**T**HE *Federal Employee*, of Washington, D.C., (January and March, 1923) gives an account of the Classification Act passed by the United States Congress on March 3, 1923. This Act provides for an impartial survey of the entire federal civil service. The need for the reclassification of federal employees has been recognized for several years. Data covering the technical and scientific services which were presented to the Congressional Joint Commission on the Reclassification of Salaries in 1919 showed variations in rates of compensation for duties requiring similar qualifications and responsibilities ranging from 32 per cent below the average for the grade to 53 per cent above it. It was also found that for a large proportion of the employees in the technical and scientific services receiving more than \$2,500 a year no provision whatever had been made to compensate for the reduced purchasing power of the dollar. Employees earning less than \$2,500 a year have been paid an annual bonus of \$240.

The new act provides for the establishment of an official Personnel Classification Board to be composed of the Director of the Bureau of the Budget, a member of the Civil Service Commission and the chief of the United States Bureau of Efficiency. The functions of the board include:—(1) The preparation of a statement giving (a) the duties and responsibilities involved in the classes to be established within the several grades, illustrated where necessary by

examples of typical tasks, (b) the minimum qualifications required for the satisfactory performance of such duties and tasks and (c) the titles given to such classes. (2) The duty of compensation rates and the submission of a report to Congress with a view to their reasonable adjustment.

The act lays down certain rules for determining initial compensation rates, among which are the following:—(1) Existing compensation of employees to be computed including bonus. (2) If the existing salary is lower than the compensation schedule an increase to be made in the minimum for the appropriate grade. (3) If the employee is not a veteran of the Civil War or the widow of such veteran and is receiving pay in excess of the range of the schedule, compensation to be reduced to nearest rate. (4) All new appointments to be made at the minimum for the grade or class thereof.

The new compensation schedules are to be effective from July 1, 1924, and present statutory salaries and bonuses are to be abolished. In determining the rate of compensation the principle of equal compensation for equal work is to be applied irrespective of sex. The Act applies to all civilian positions in any department of the United States Government with the exception of the postal service, the Board of Education, the Police and Fire Department of the District of Columbia, the Public Health Service, the Coastguard Service and certain skilled trades and labour.

## MOTHERS' ALLOWANCES AND CARE OF CHILDREN IN ALBERTA

### Annual Report of Superintendent of Neglected Children for 1922

THE annual report on Mothers' Allowances in Alberta in 1922 has been issued recently by the Provincial Superintendent of Neglected Children. This official has charge of the administration of the Mothers' Allowance Act as well as of the Children's Protection Act. A similar combination of duties exists in Saskatchewan where by legislation passed in 1922 the new Bureau of Child Protection has charge of the administration of the Children's Protection Act, the Juvenile Courts Act and the Mothers' Allowances Act.

The number of widows benefiting under the Alberta Mothers' Allowance Act in 1922 continued to increase, severely straining the funds available for their relief. The increase is accounted for by the unusual drought last year, and by the decrease in employment in the Province, which was only partly offset by a fall in city rents. Some relief is looked for from amendments to the act which were before the Legislature at its recent session. These amendments, which would enable rural councils, as well as the councils of cities and towns, to appoint inspectors under the act, will be outlined in a review of the work of the session in a later issue of the LABOUR GAZETTE. During the past year difficulty was experienced by the administrators in distributing the grants equally according to districts, but it is hoped that in future it will be more possible to satisfy the claims of the various municipalities. The Superintendent recommends that reciprocal arrangements be made with other provinces in respect to beneficiaries who move from one province to another.

The number of mothers who were drawing allowances on December 31, 1922, was 619, as compared with 538

at the end of the preceding year. The number of children assisted was 1,864 in 1922 and 1,636 in 1921, and the total amount paid last year was \$252,243, as compared with \$207,144 in 1921. A table is given showing the number of mothers coming under the Act, and the amounts paid to them, in the cities, towns, villages, municipalities and unorganized districts, together with the number of children for whom these mothers have to provide. The figures show that while the mothers drawing allowances are more numerous in the cities and towns, the dependent families are larger in the more sparsely settled districts. This difference may perhaps be partly accounted for by the fact that the outlying districts are less closely in touch with the administration, and that assistance therefore tends to be limited to outstanding cases of need.

#### Department of Neglected Children.

The Alberta Children's Protection Act provides for the organization of Children's Aid Societies, and these societies are largely responsible, in the centres in which they exist, for carrying out the purpose of the Act, which, as the report says, is "to give every child a reasonable opportunity in life." Municipalities having a population of 5,000 or more are required by law to provide a shelter or permanent home in which the wards of the Department may be cared for until good homes can be found for them. They must also provide probation officers to do the work of the Department within their own area. In smaller towns, villages and municipalities, and in the outlying districts, the work is done through inspectors and matrons employed directly by the Department. The wards of the Department are divided into two

classes; first, the neglected and dependent, including orphans and children of parents incapable or unfit to look after their children decently (during last year 453 children of this class were cared for); and second, delinquent boys and girls, of which class 443 boys and girls were tried by the 70 Juvenile Court Commissioners throughout the Province. These children are not treated as criminals and are not tried in the public court room. In most cases first offenders are returned to their parents after the Court has had a friendly talk with parents and child. Some children are placed in charge of a probation officer, whose duty is to take a special interest in the child. By this treatment, it is stated, "many boys and girls have been reclaimed without having any of the stigma of Court or jail attached to them. It is only when all other means have failed that they are confined to institutions". Inspectors and officers are expressly instructed to

secure an adjustment, if possible, without Court proceedings. Another principle followed by the Department is the necessity of home surroundings for the normal development of children, and every effort is made before a home is broken up. Institutions however are required for the treatment of feeble-minded or "incorrigible" boys and girls.

The following figures show the extent of the work during the past year. Neglected children brought before juvenile courts numbered 453. Of these children 246 were made wards of the Superintendent of Neglected Children. In the same period 443 delinquent children were dealt with, and 833 children passed through the various shelters. Of the latter number 117 were adopted, 233 were placed at work, 251 were returned to relatives, 55 were placed in institutions, 25 died, 13 ran away, and 95 remained in the shelter at the close of the year.

---

## HANDBOOK OF CHILD WELFARE WORK IN CANADA

Publication by Child Welfare Division of the Dominion Department of Health

A valuable book of reference on the manifold work now being carried on in the interest of children throughout Canada, has been published recently by the Dominion Department of Health, under the title "A Handbook of Child Welfare Work in Canada for the year ended March 31, 1922," compiled and edited by Dr. Helen MacMurchy, chief of the Division of Child Welfare. The Child Welfare Division was the first division created under the provisions of the Dominion Act of 1919 establishing the Department of Health.

The health and welfare of children are recognized as being primarily matters of Provincial concern, but their vital importance to the nation brings them within the national sphere, and the new Department was therefore em-

powered "to co-operate with the Provincial, territorial and other health authorities with a view to the co-ordination of the efforts proposed or made for preserving and improving the public health, the conservation of child life and the promotion of child welfare." The present Handbook is the outcome of the policy outlined in the foregoing section of the Act.

Child hygiene, public health nursing and maternal welfare are the special charge of the provincial health authorities, the chief executive being generally the Provincial principal medical health officer, having under his control, in some provinces, bureaus of child and maternal hygiene. In other provinces such bureaus have independent jurisdiction. Most provinces have,

besides, a superintendent of Neglected and Dependent Children. Several cities now make special provision for the teaching of defective children, among these being Victoria and Vancouver in British Columbia; Calgary and Edmonton, in Alberta; Regina, in Saskatchewan; Winnipeg, in Manitoba; Toronto, Ottawa, Hamilton, Guelph, Peterboro and Windsor in Ontario; Montreal, in Quebec, and Halifax, in Nova Scotia. New Brunswick also has taken some steps in this direction. In Toronto alone forty or more classes have been established under the Auxiliary Classes Act of 1915, these including open air or forest schools held in public parks, classes for defectives, for sight saving, etc. There are also visiting teachers, whose work among defective children, it is stated, has met with much success. In Montreal, Toronto and other large cities milk is given to the children either free or at low cost; supervised playgrounds have long existed in many cities and towns; while in some centres there are classes for children of pre-school age.

Child welfare is one of the main concerns of numerous women's organizations throughout Canada. Every province has its Women's Institutions or Home Makers' Clubs, and about three years ago a Dominion Federation of Women's Institutes was formed, while in Quebec the "Cercles de Fermières" and in other provinces the women's sections of the Grain Growers, the United Farm Women, etc., all work in furtherance of the same object. Mention is also made in this connection of the Daughters of the Empire, the National Council of Women, the Red Cross Society and other Dominion-wide organizations, besides the Child Welfare and Children's Aid societies, which exist in most cities; the Little Mothers' League, and the Junior Red Cross Societies, which are specially strong in Saskatchewan.

Coordinating agencies for these manifold activities are provided by several national organizations. The Dominion Council of Health is a representative body established under the Dominion Health Act and composed of the Chief Medical Officers of Health of the various provinces, and one representative each of the agricultural interests, of labour, of health education, and of women in urban and rural districts. A large proportion of the work of the Council is connected with child welfare.

The Canadian National Council of Child Welfare was the outcome of an interprovincial conference in 1920 and is intended to secure co-operation among voluntary associations doing child welfare work. All the provinces are represented on this Council and it is expected that in time provincial associations will be formed as a basis for the National Council; already three provinces have taken steps in this direction.

The Canadian Association of Child Protection Officers was organized in 1921 as the result of a conference held at Winnipeg at the suggestion of judges of juvenile courts, provincial superintendents of neglected dependent and delinquent children, and other provincial officers, and of the officials of children's aid societies and superintendents of detention and industrial homes. The membership is strictly limited to persons who are responsible for children under special treatment, especially those of the "delinquent" type.

The information contained in the Handbook is arranged by provinces, the various public and private institutions on behalf of the children being fully described so as to facilitate comparison between the work of the several provinces of Canada.

## MINIMUM WAGES FOR FEMALE EMPLOYEES IN CANADA.

---

### Comparison of rates in various provinces.

**T**HE provisions of the minimum wage laws enacted in various Provinces of Canada were outlined and compared in an article which appeared in the *LABOUR GAZETTE* in September, 1920. At that date Minimum Wage acts had been passed in Manitoba, British Columbia, Quebec, Saskatchewan, Nova Scotia and Ontario, while in Alberta the interests of female workers were protected by a Minimum Wage Committee appointed under the Provincial Factories Act. The Quebec act passed in 1919, and the Nova Scotia act, passed in 1920, have not yet taken effect. On the other hand a Minimum Wage Act was enacted in Alberta in 1922. Regulations issued by the new Board have been outlined in the *LABOUR GAZETTE* for March and April, 1923. The accompanying comparative table shows weekly rates for experienced adults fixed by the Boards of the following Provinces: Alberta, British Columbia, Manitoba, Ontario and Saskatchewan. In Manitoba orders were issued separately for each type of factory. These are grouped in the table under the heading "Manufacturing."

#### Inexperienced workers.

Minimum wage orders in all Provinces fix special rates for learners, apprentices or minors, that is, workers under 18 years of age, and some also make provision for the physically defective. The learning period ranges from three to eighteen months, according to the nature of the occupation affected by the order, and the rates of wages advance by stages of proficiency until the full minimum wage for experienced adults is reached. The Boards have power to limit the number of learners and minors employed at a plant. Saskatchewan was former-

ly an exception, but legislation passed in 1922 conferred this power upon the Board of that Province. The proportion of these classes to experienced workers varies widely; for factory workers, for example, the percentage is, in British Columbia 14.3, in Manitoba, 25 per cent; in Ontario, 50 per cent for adults, learners and miners combined; neither of these classes, however, to exceed 33 per cent of the experienced adults employed. The orders so far issued by the Alberta Board have laid down no limits in this respect.

#### Hours of labour.

The Boards of all the provinces, except Quebec, have power to fix not only the minimum wages but also the minimum number of hours for which such wages shall be paid. There is, however, a wide divergence in the standards of working hours which have been fixed by the various orders. Many of these orders provide for a working week of 48 hours, but allow latitude in regard to the distribution of these hours throughout the week, to permit of a Saturday half holiday with consequent lengthening of working hours beyond eight hours on the other days of the week.

The orders of the Alberta Board have not so far specified any limit to the working day or week.

In British Columbia the week of 48 hours is prescribed for workers in offices, in public housekeeping, in personal service, in theatres, and in telephone and telegraph service; special rules to govern overtime work are laid down in the same province for the fruit and vegetable industry. Working hours for women and girls in factories are

subject to the provisions of the provincial Factories Act, while no provision is made in regard to the hours of mercantile, laundry or fishery workers.

In Manitoba the regulations of the Board governing most types of factories provide for a 9-hour day and a 48-hour week, but longer hours are permitted in some employments. Thus bag makers and jewelry workers have a 9-hour day and a 49-hour week; auto-

top, bedding, glove, dyeing and cleaning workers have a 9-hour day and a 50-hour week, and millinery, knitting, tailoring, and dressmaking employees have an 8½-hour day and a 50-hour week. Laundry workers may be employed for 52 hours in the week, but for not more than 9 hours in any day. The Saturday working hours in shops and stores are 11½, with a weekly maximum of 49 hours, or 53 hours per

MINIMUM WEEKLY WAGES FOR EXPERIENCED ADULTS.

	Alberta	British Columbia	Manitoba	Ontario	Saskatchewan
Manufacturing....	\$14.00	\$14.00	\$11.00 to \$12.00	According to population \$12.50 11.50 11.00 10.00	\$15.00 (Millinery and dressmaking)
Shops and stores..	\$14.00	\$12.75 (26½ cents per hour)	\$12.00	According to population \$12.50 12.00 11.00 10.00 9.00 8.00	\$15.00
Laundries, dyeing and cleaning, etc.	\$14.00	\$13.50 (28½ cents per hour)	\$11.00 to \$12.00	According to population \$12.00 11.00	\$14.00
Offices.....	\$14.00	\$15.00 (\$65 per month)	\$12.50	According to population \$12.50 12.00 11.00 10.00 9.00 8.00	
Hotels, restaurants, boarding houses, etc.	\$14.00 for 6-day week \$16.50 for 7-day week	\$14.00 (Includes waitresses, chamber maids, elevator operators, etc.)	\$12.50		\$14.00 for 6-day week of 48 hours. Kitchen employees \$12. \$15.00 for 7-day week. Kitchen employees \$13.
Personal service...	\$14.00 (includes ushers, barbers, cloak-room attendants, etc.)	\$14.25	\$12.00		
Telephone and Telegraph employees.		\$15.00		According to population \$12.50 12.00 11.00 10.00 9.00 8.00 7.00	
Fishing.....		\$15.50			
Fruit and vegetable industry.		\$14.00 for week of 48 hours piece work rates on this basis			

week in 5c, 10c, and 15c stores. Office workers in the same province are allowed a maximum week of 44 hours with a maximum day of 8 hours.

The Ontario Board has as yet fixed no definite limits for the working day or week, but the recent orders governing office workers provide that the minimum rates for part time workers shall be based on a regular working week of 48 hours.

In Saskatchewan no time limit is fixed for milliners and dressmakers, but a 48-hour week is fixed as the maximum normal period of employment in laundries and factories, shops, stores and mail order houses, and hotels and restaurants.

#### Trades conferences.

The Boards of Alberta, British Columbia, and Ontario, before fixing minimum wage rates for any occupation, summon conferences consisting of representatives of the workers, their employers, and of the general public, and the order which follows generally represents a compromise between the views of the interested parties, though the Board is not bound by the recommendations of such conferences. The Manitoba Board has judicial powers in

regard to the taking of evidence before deciding on minimum wage rates.

#### Boards.

The Minimum Wage Board of Alberta, established under the act passed in 1922, consists of three members appointed by the Lieutenant-Governor-in-Council, and representing respectively the employers, the employed, and the Province at large, one of the members being named chairman of the Board. In British Columbia also the Board consists of three members, one of them being the Provincial deputy minister of labour, acting as chairman. Similar rules are laid down for the appointment of the Minimum Wage Commission in Quebec, with the further provision that one of the three members be a woman. The acts of Nova Scotia, Ontario, Manitoba and Saskatchewan place administration in the hands of Boards of five members, including two women, all the members being appointed by the Provincial Government. Board members are allowed no remuneration in British Columbia or Quebec; in Ontario they receive a *per diem* allowance for transaction of official business, while the acts of Nova Scotia, Manitoba and Saskatchewan allow the members regular remuneration for their services and expenses.

---

### MINIMUM WAGES IN ONTARIO.

#### Orders governing employment of female office workers

**T**HE Ontario Minimum Wage Board recently issued orders governing the employment of female office workers (a) in Toronto, and (b) throughout the rest of the Province according to local population. As in the orders already in force in Ontario the highest rates are fixed for Toronto, the minimum wage being lower in smaller centres of population. The accompanying table shows, by population groups, the minimum

weekly rates fixed by the order for experienced and for inexperienced adults, and for young girls, in office employment.

The Toronto order provides that any female employee who has worked for a year or more in an office before reaching the age of 18 years shall be entitled to the full minimum wage of \$12.50 on reaching that age; or if she has been working for less than a year when she reaches the age of 18 years she shall be

entitled to the full minimum upon completing a year of work in an office. All the orders require that every employee of 18 years or over be paid at least the rate fixed for inexperienced adults.

An office worker presenting a diploma from an accredited business college or the commercial department of a high school is entitled to the full experienced adult minimum wage.

Population groups	Experienced adults (over 18 years)	Inexperienced adults (over 18 years)	Young girls (under 18 years)
Toronto.....	\$12.50	6 months at \$10 6 months at \$11	6 months at \$ 8 6 months at \$ 9 6 months at \$10
Cities over 30,000 (except Toronto).....	12.00	6 months at \$10 6 months at \$11	6 months at \$ 8 6 months at \$ 9 6 months at \$10
Cities and towns between 10,000 and 30,000....	11.00	6 months at \$ 9 6 months at \$10	6 months at \$ 7 6 months at \$ 8 6 months at \$ 9
Cities and towns between 4,000 and 10,000....	10.00	6 months at \$ 8 6 months at \$ 9	6 months at \$ 6 6 months at \$ 7 6 months at \$ 8
Towns and villages between 1,000 and 4,000...	9.00	All inexperienced 6 months at \$6.00 6 months at \$7.00 6 months at \$8.00	
All below 1,000 and rural parts.....	8.00	6 months at \$6.00 6 months at \$7.00	

The proportion of inexperienced adults or young girls in any establishment is fixed by the orders. In Toronto the number of these classes must not exceed one-third of the total female working force, and the number of inexperienced adults and young girls together must not exceed one-half of the total working force; temporary employees, that is, those whose employment lasts not longer than one month (or two months outside Toronto) are not reckoned in calculating the proportion of inexperienced workers. Outside Toronto this proportion must not exceed 25 per cent of the total female working force. This rule does not apply to offices where less than four workers are employed.

Deductions for lost time must not exceed the proportionate value of the time lost as determined by the minimum wage for the normal working period.

The adult minimum rates apply also to temporary workers, whose term of employment is less than two months. Part-time is to be calculated on the basis of a 48-hour week. Employees required to wait on the premises must be paid for the time so spent. Every establishment is required to keep a copy of the order which applies to it, posted in a conspicuous place, and employees who receive less than the prescribed minimum are asked to report the circumstance to the Board.

These orders are subject to annual revision by the Board.

## THE EMPLOYMENT SITUATION DURING MARCH, 1923, AS REPORTED BY EMPLOYERS

THE volume of employment as indicated in returns tabulated by the Dominion Bureau of Statistics showed a large contraction at the close of March, representing mainly seasonal losses in logging and temporary curtailment of operations in manufacturing over the Easter holidays. The backward season also had a bad effect upon employment, retarding to a considerable extent spring operations in the out-of-door industries. The losses at the close of March, which involved the release of over 20,000 persons, affected a rather larger number of workers than did the shrinkage manifested during the same period of last year, but they were not as extensive as in March, 1921. In both of those years substantial recovery was indicated early in April, the progressive movement continuing almost uninterruptedly until the autumn. It is expected that a similarly favourable tendency will be evidenced in the next report.

The course of employment as recorded by employers during 1921, 1922 and to the close of March, 1923, is illustrated in the accompanying chart. It will be seen that the level of employment is seven points higher than at the close of March, 1922, and over three points above that indicated in the same month of

1921. The upward movement that was manifested during the summer and early autumn of the past two years may also be traced.

Statements were received from 5,705 firms employing in each case over 15 workers. The payrolls of these employers aggregated 736,377 persons, of whom 718,524 were actually at work on March 31, as compared with 738,877 at the close of the preceding month. The index number, reflecting this decline of over 20,000 persons, dropped from 89.9 on February 28, to 87.6 at the close of March, as compared with 80.6 and 84.1 on March 31, 1922 and 1921, respectively. As already mentioned, the most pronounced reductions in personnel were reported in logging, an indication of between-season slackness in bush operations. The contractions in manufacturing, though severe, were chiefly of a temporary character, being largely due to shutdowns over the Easter holidays. The iron and steel industries suffered especially heavy losses on that account. On the other hand, signs of spring revival in construction and transportation were in evidence, although the lateness of the season delayed work to some extent. Activity in trade showed a considerable increase.

Employment in all districts except British Columbia was in smaller volume than at the close of February. In that province considerable improvement was indicated in logging, in the mining of metallic ores, and in shipping and stevedoring. The most important reductions were reported in Ontario, but the declines in Quebec and the Prairie Provinces were also pronounced. The closing of the railway car shops and other manufacturing plants over Easter caused a large share of the reductions in those provinces, but the losses in logging, especially in Ontario, affected a great many workers. The level of employment in all provinces was higher than at the close of March, 1922, and except in the Prairie Provinces, the situation everywhere was better than in March, 1921. The following table gives the index number of employment by provinces as at the end of March and February, 1923, and March, 1922 and 1921, the number of persons employed by the same firms on January 17, 1920, being taken as 100 in every case.

District	Relative weight	Apr. 1, 1923	Mar. 1, 1923	Apr. 1, 1922	Apr. 1, 1921
Maritime Provinces....	9.4	90.5	90.7	80.6	87.2
Quebec and Ontario....	69.9	87.3	89.7	79.7	82.3
Prairie Provinces.....	12.3	83.5	88.9	82.1	88.7
British Columbia.....	8.4	92.8	92.0	85.9	88.1
Canada.....	100	87.6	89.9	80.6	84.1

A review of the returns by cities shows that in Toronto increased activity was indicated, while in Montreal, Ottawa, Hamilton, Winnipeg and Vancouver the tendency was downward. Returns were tabulated from 831 concerns in Toronto, whose payrolls aggregated 96,796 persons as compared with 95,841 workers at the close of February. The greater part of this increase of one per cent occurred in retail stores, in iron and steel and other manufacturing industries. On the other hand, biscuit and musical instrument factories were not so fully employed, and reductions in personnel were also indicated in printing and publishing shops. Statements

were compiled from 726 Montreal concerns employing 95,305 persons, or 3,100 fewer than in their last report. This difference represented a decline of 3.2 per cent, practically all of which was caused by the temporary shutdowns of railway car shops over Easter. The construction industries in that city were somewhat busier. A nominal decline only was shown in Ottawa, the 126 firms making returns having a total working force of 9,473 persons as compared with 9,506 at the close of February. Rather small fluctuations in a number of groups caused this minor reduction, the most important occurring in pulp and paper. The largest declines in Hamilton were recorded by textile and tobacco manufacturers, while on the other hand, improvement was registered in the iron and steel industries. Reports were received from 198 concerns in that city whose payrolls aggregated 26,884 persons, or 242 less than in the preceding month. The reduction of slightly over 200 persons in Winnipeg was due to the laying off of comparatively small numbers of workers in several industries, the largest decreases occurring in construction and local transportation. A combined working force of 24,358 persons was indicated by the 285 concerns making returns, who had employed 24,568 workers in the previous month. The volume of employment afforded in sugar refineries, sawmills and retail stores in Vancouver showed a falling off. Two hundred and twenty-one firms in that city showed that they employed 18,903 persons as compared with a total working force of 19,646 in February. The index numbers of employment in these cities are given in the following table:

City	Relative weight	Apr. 1, 1923	Mar. 1, 1923	Apr. 1, 1922
Montreal.....	13.3	83.3	85.9	76.0
Toronto.....	13.5	86.7	86.7	82.7
Ottawa.....	1.3	90.6	92.2	.....
Hamilton.....	3.7	88.4	89.2	.....
Winnipeg.....	3.4	85.7	86.4	83.6
Vancouver.....	2.3	86.9	90.4	87.8

### The Manufacturing Industries.

Substantial reductions were registered in the manufacturing division during March, although most of the declines were of a temporary character and revival was expected to occur early in April. The shrinkage in these industries was rather more comprehensive than during March, 1922, but it was less extensive than in the same month of 1921. The heaviest contractions, which were almost entirely due to shutdowns over the Easter holidays, occurred in the railway car shops. Automobile factories were rather less fully employed, but all other divisions of the iron and steel industry reported improvement. The shrinkages in textiles and in the edible plant product division, which were also considerable, though temporary in character, were next largest. Activity in abattoirs and meat-packing establishments; boot, shoe, musical instruments, printing, publishing and tobacco concerns also showed curtailment. On the other hand, sawmills, rubber, glass, brick, electrical appliances and non-ferrous metal factories were busier than at the close of February. The reductions mentioned above were reported to some extent in all provinces, but they were, of course, heaviest in the manufacturing centres of Quebec and Ontario. An aggregate payroll of 421,985 persons was indicated by the 3,776 manufacturers making returns, who had employed 431,862 persons in their last report. The difference represented a contraction of 2.3 per cent. In spite of this drop the index number of employment stood several points higher than at the same period of 1922 and 1921.

**ANIMAL PRODUCTS, EDIBLE.**—Continued curtailment was indicated in the edible animal products division during March, 256 persons having been released by the 140 concerns making returns. As their total working force comprised 11,902 persons as compared with 12,158 workers on February 28, this represented a decrease of 2.1 per cent, the greater part of which was reported in abattoirs and meat-packing plants in

Ontario. Fish canning, smoking and curing also afforded slightly less employment, but dairies were busier. The tendency during March, 1922, had been favourable, but the level of employment then was slightly higher than for the month under review.

**LEATHER PRODUCTS.**—Employment in boot and shoe factories continued to decrease while tanneries and factories producing harness, saddlery and other leather goods were somewhat more fully engaged. The majority of the workers released were laid off by Quebec concerns. Statements were received from 206 manufacturers of leather products, whose payrolls aggregated 18,194 persons as compared with 18,579 employees on February 28. Reductions on a much larger scale had been indicated during March, 1922, and the index number now stands very slightly higher than at that time.

**LUMBER PRODUCTS.**—The trend of employment in this group continued upward, although the seasonal increases were much less extensive than during the same period of last year. Rough and dressed lumber mills and carriage factories recorded improvement, the gains being shown to some extent in all provinces except the prairie district. The total working force of the 683 firms making returns stood at 43,381 persons as compared with 42,490 in their last report, an increase of slightly over two per cent. In spite of the fact that the gains in March of this year were not so pronounced as those registered during the same month of last year, the index number of employment stood some 12 points higher than on March 31, 1922. It was, moreover, 14 points higher than in the same month of 1921.

**PLANT PRODUCTS, EDIBLE.**—Considerable losses in employment were indicated in this group during March, chiefly in sugar and biscuit factories. The reductions, however, were partly of a temporary character, and recovery will no doubt be indicated in the next reports. Statements were compiled from 290 manufacturers employing 23,545 per-

sons, as compared with 24,642 at the close of February. This decrease of 4.5 per cent was reported almost entirely in Ontario and British Columbia, while elsewhere the changes were slight. Reductions had also been indicated by the concerns making returns for March of last year, but the index numbers for the two periods were practically the same.

**PULP AND PAPER PRODUCTS.** — The favourable movement manifested by this industry in the last two reports, was checked in March, and contractions involving the release of 444 persons were indicated by the 453 concerns reporting. Their total payroll stood at 50,029 persons as compared with 50,473 on February 28; there was therefore, a decline of .9 per cent. The bulk of this shrinkage was registered in Ontario, and in printing and publishing establishments. Pulp and paper mills, moreover, were not so fully employed. Improvement had been indicated in March, 1922, but the level of employment at that time was lower than for the month being surveyed.

**RUBBER PRODUCTS.** — The production of rubber footwear and tires in Ontario showed a moderate increase, while elsewhere no change was indicated. Thirty concerns employed 11,908 persons as compared with 11,776 workers on February 28, an increase of 1.1 per cent. The situation during March, 1922, had shown practically no change, and employment for the period under review was in much greater volume than at that time.

**TEXTILE PRODUCTS.** — The temporary cessation of operations over Easter caused considerable declines to be recorded in the textile industries. The shutdowns were particularly numerous in factories producing thread, yarn, cloth, hosiery and knit goods and carpets, rugs and mats. Garment and personal furnishing works absorbed a rather larger number of workers, as did also the production of cordage. The decreases were reported almost wholly in Ontario, while in Quebec an upward tendency was in evidence. Statements

were received from 594 concerns whose payrolls, aggregating 71,967 persons, were smaller by 1,003 employees than in February. Increased activity had been indicated during March, 1922, but the situation then was not so good as for the month being surveyed.

**MUSICAL INSTRUMENTS.** — Musical instrument factories in Ontario were less fully engaged than in February. The retrogressive movement repeats that indicated during the same month of last year, although the declines then were somewhat smaller than in March of this year. The level of employment at that time, however, was lower than for the month under review. A combined working force of 3,179 persons was reported by the 41 manufacturers making returns, who had employed 3,397 workers at the close of February; the difference represented a decline of over 6 per cent.

**TOBACCO, DISTILLED AND MALT LIQUORS.** — Further contractions were reported by tobacco manufacturers at the close of March, 367 persons having been released by the 96 employers making returns. As their payroll aggregated 9,986 persons as compared with 10,353 at the close of February, this was a reduction of 3.5 per cent, of which the greater part was recorded by firms in Quebec, Ontario and the prairie provinces. This movement which repeats that experienced during March, 1922, caused the index numbers for the two periods practically to coincide.

**CLAY, GLASS AND STONE PRODUCTS.** — The period of contraction which set in at the end of last November and lasted during January and February appeared to be checked during the month being surveyed. Returns were compiled from 111 concerns whose staffs, comprising 8,520 persons, were larger by 252 workers than at the end of February. This expansion of 3 per cent occurred almost entirely in glass and brick works in Quebec, the tendency in other provinces being rather unfavourable. During March of last year improvement of a slightly more pronounced character had been indicated, but employment at that

time was in somewhat lesser volume than at the end of this March.

**ELECTRICAL APPARATUS.**—Activity in this division continued to increase considerably, a 4.6 per cent gain in personnel being indicated by the 32 firms making returns. A total working force of 8,000 persons was reported as compared with 7,646 employees on February 28. Ontario and Quebec concerns absorbed the majority of these additionally employed workers. The trend of employment during March, 1922, had also been upward; the situation then, however, was very much less favourable than for the period being surveyed.

**IRON AND STEEL.**—As already mentioned, employment in the iron and steel industry was very largely affected by temporary shutdowns over Easter, particularly in railway car and locomotive shops. Automobile concerns also reported reduced activity. On the other hand, the number of workers employed in the crude, rolled and forged, agricultural implement, heating appliance, wire, foundry and machine shop divisions increased as compared with the preceding month. Varying conditions were indicated in different parts of the country; the Maritime Provinces and Ontario recorded improvement, while elsewhere contractions were registered. A combined payroll of 118,981 persons was reported by the 637 employers making returns, who had employed 126,881 workers at the end of February. There was, therefore, a decline of 6.2 per cent, from which recovery was expected early in April. Contractions on a rather smaller scale had been indicated during March, 1922, but the index number at that time stood over 12 points lower than in the month under discussion.

**NON-FERROUS METAL PRODUCTS.**—Moderate improvement was shown in this industry, mainly in factories producing lead, tin, zinc, copper and aluminum articles in Ontario. Statements were tabulated from 101 firms employing 11,323 persons as compared with 11,204 at the close of February, an increase of 1.1 per cent. The tendency during

March of last year had also been upward, but the index number for the month under review stood over 19 points higher than at that time.

#### Logging

Very heavy contractions were again indicated in logging camps, marking the conclusion of the winter operations in the woods every where except in British Columbia. In that province a contrary tendency was evidenced, there being large increases in the working force of logging camps. The heaviest losses occurred in Ontario, where approximately 8,600 persons were released by the concerns reporting. The staffs of the 201 concerns making returns declined from 32,628 persons in February to 21,343 on March 31. The difference represented a decrease of 34.6 per cent. Large reductions had also been indicated during March, 1922, when the situation was less favourable than this spring.

#### Mining

**COAL MINING.**—Further losses were reported in coal mining during March; the largest decreases took place in Alberta, but the tendency in the Maritime Provinces and British Columbia was also downward. The 93 concerns making returns, whose payrolls aggregated 29,644 persons, reported that they had released 1,330 workers or 4.3 per cent of their staffs, since the end of February. Declines on a somewhat smaller scale had been indicated during March, 1922, the movement being largely seasonal in character, but employment at that time was in less volume.

**METALLIC ORES.**—Gold, silver, copper and zinc mines in British Columbia were decidedly more fully engaged, while in Ontario there was a slight falling off in activity in gold mining. Returns were compiled from 42 concerns employing 9,948 workers, as compared with 9,684 employees at the end of the preceding month. The difference represented an increase of 2.7 per cent. Expansion on a much smaller scale had been indicated during the corresponding month of last

year, but the index number at that time stood over 20 points lower than for the month being surveyed.

**NON-METALLIC MINERALS OTHER THAN COAL.**—The opening up of spring operations in this division caused moderate increases in personnel. A combined working force of 5,324 persons was reported by the 62 firms making returns, who had employed 5,209 workers in February, an increase of 2.2 per cent. The trend of employment in March, 1921, had been retrogressive, and the situation then was decidedly less favourable than for the month being surveyed.

### Communication

The volume of employment afforded on telegraphs showed a considerable increase, chiefly in Ontario and British Columbia. Telephones employed practically the same number of persons as in the last report. Returns received from 168 employers showed that their payrolls comprised 20,205 persons as compared with 20,096 at the close of February. Additions to staffs of approximately the same size had been indicated during the corresponding month of last year and the index numbers for the two periods practically coincided.

### Transportation

**STREET AND ELECTRIC RAILWAYS AND CARTAGE.**—Further shrinkage was reported in the volume of employment afforded in this group at the close of March, when 243 persons (or 3.1 of the payroll) were let out by the 104 concerns reporting. Their payrolls aggregated 18,071 persons as compared with 18,314 on February 28. All provinces shared to some extent in the contraction. Conditions during March, 1922, had remained unchanged, and employment then was in slightly greater volume than in March of the present year.

**STEAM RAILWAYS.**—Slight additions to staffs were reported by the 119 concerns and divisional superintendents making returns, whose payrolls included 73,361 persons. As they had employed

73,250 workers on February 28, this indicated a minor gain of .2 per cent. Varying conditions in different provinces produced this result; in the Maritime Provinces, Ontario and British Columbia increased activity was indicated, that in Ontario being on a large scale. In Quebec and the Prairie Provinces, on the other hand, curtailment was shown, especially in the latter district. Expansion of a rather more marked character had been indicated during the same month of the preceding year, but the index number of employment then was not so high as for the month under discussion.

**SHIPPING AND STEVEDORING.**—Substantial recovery was recorded in this division in Quebec, Ontario and British Columbia, while in the Maritime Provinces, as might be expected at this time of the year, the tendency was downward. Fifty employers reported that their payrolls covered 9,925 persons, or 518 workers more than at the close of February. This was an increase of 5.5 per cent, and caused the level of employment to be several points higher than during the same month of last year, when increased activity had also been indicated.

### Construction and Maintenance.

**HIGHWAY CONSTRUCTION.**—According to returns from 30 employers, activity in this industry showed a fairly large increase. Their payroll reached 1,900 persons as compared with 1,671 workers at the end of February, there being an expansion of 13.7 per cent, practically all of which occurred in Ontario. Additions to staff of a similar size had been indicated during the same month of 1922, but the index number then was lower than in March of this year.

**BUILDING CONSTRUCTION.**—For the first time since the beginning of October, the trend of employment in this industry was upward. Increased activity had also been indicated during March of a year ago, but the situation for the period under review was considerably more favourable than at that time. At the end of March, 13,030 persons were

working for the 293 contractors making returns, whose staffs had aggregated 12,619 workers in February. This increase of 411 employees, or 3.3 per cent, was reported largely in Quebec; in Ontario further curtailment was indicated, while elsewhere the situation showed little change.

**RAILWAY CONSTRUCTION AND MAINTENANCE.**—The volume of employment afforded by the construction departments of the railways showed a falling off of 1.2 per cent during March, mainly in Quebec and Ontario. In the Maritime and Prairie Provinces and British Columbia the tendency was slightly upward. Reports were received from 31 concerns and divisional superintendents with a total working force of 28,503 persons as compared with 28,841 employees on February 28. Contractions on a very much larger scale had been indicated during March, 1922, and the index number then stood about 8 points lower than on March 31, 1923.

### Services.

**PERSONAL SERVICE** (chiefly laundries).—An increase in employment of 138 persons, or 3 per cent, was reflected in returns tabulated from 91 employers in this division. The payrolls comprised 4,760 persons as compared with 4,622 workers in the last report. Practically all this increase occurred in Ontario.

### Trade.

**RETAIL.**—Statements compiled from 204 retail shops showed that they employed 33,984 salespersons as compared with 33,339 at the close of February. This increase of 1.9 per cent was reported almost wholly in Ontario, while in Quebec and British Columbia contractions were indicated. Small increases in personnel had also been indicated during March, 1922, but conditions during the month being surveyed were rather more favourable than at that time.

**WHOLESALE.**—The trend of employment in wholesale trade continued to

Industry	Relative weight	March 31, 1923	Feb. 28, 1923	March 31, 1922	March 31, 1921

<b>All industries</b> .....	100.	87.6	89.9	80.6	84.1

be moderately favourable, 127 persons having been added to the staffs of the 352 firms making returns. As their sales force included 19,443 persons at the end of March, this indicated an expansion of .7 per cent, almost all of which took place in Quebec. Insignificant reductions in employment had been indicated during March, 1922, and the index number then stood slightly lower than for the month under review.

The table on page 518 gives the index numbers of employment in the various industries as at the end of March and February, 1923, and March 31, 1922 and 1921. The first column shows the proportion of employees in each industrial group in relation to the total number of workers in all groups for the month being surveyed. (Number of workers employed on January 17, 1920, equals 100).

### UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING MARCH 31, 1923, AS REPORTED BY UNIONS MAKING RETURNS.

THE present article on unemployment among members of trade unions deals with the situation reported during the quarter ending March 31, 1923. The percentage of idleness stood at 7.8 at the close of January or 1.4 per cent higher than on December 31, 1922. Improvement was registered during the following month, when an unemployment percentage of 6.4 was reported. Slightly more unemployment was reported at the end of March, when the percentage out of work stood at 6.8. Less idleness was shown than during the same period of last year, the per-

centage of unemployment at the end of March, 1923, being about 3 points lower than at the close of the corresponding period of 1922. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own trades, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment

is based, it should be understood that such figures have reference only to the unions reporting.)

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18 and by months for 1919-20-21-22 to March of this year. During January the curve followed the upward course of the last three months in 1922 but in February it projected downward, the level at the end of February being the same as on December 31, 1922. In March conditions were not quite so favourable. A lower level of unemployment was maintained than in the corresponding quarter of last year.

All provinces with the exception of New Brunswick and Quebec registered more unemployment during January than in the preceding month. Considerable improvement was reported during February, and in comparison with January employees in New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia were busier. During March, however, a slight increase in the volume of unemployment was shown, Quebec, Alberta and British Columbia all reporting larger percentages of idleness.

Table I on this page summarizes the returns by provinces, and Table II on page 521 shows the percentage of unemployment reported in the different groups of industries.

More employment was afforded in the manufacturing industries during January than in the corresponding month in 1922, owing to greater activity among pulp and paper, garment and iron and steel workers. In the building trades and in the transportation industry employment was also on a higher level.

During February workers in the manufacturing industries were better employed than in February of last year. Printing tradesmen, iron, steel and glass workers were busier, but garment

workers reported reduced activity. Employment in the building trades and among transportation workers was on a higher level than in the same month of last year but the situation among retail clerks was not so good.

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES.

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Jan. 1920	2.7	4.0	3.4	2.7	4.5	4.9	4.0	11.8	4.0
Feb. 1920	5.1	2.4	2.3	2.9	4.6	5.2	5.1	10.2	4.0
March 1920	1.9	3.1	3.3	2.3	3.2	4.0	2.1	7.6	3.1

Dec. 1922	3.2	6.1	7.8	4.7	7.8	4.1	5.1	13.3	6.4
Jan. 1923	3.4	5.0	6.0	6.7	12.8	5.7	8.5	18.6	7.8
Feb. 1923	5.7	1.7	6.4	7.0	9.5	5.2	4.8	6.4	6.4
March 1923	3.0	1.4	7.3	5.5	8.5	5.0	7.6	14.0	6.8

More favourable conditions prevailed during March than in the corresponding month of last year. Improvement among pulp and paper, iron, steel and glass workers caused employment in the manufacturing industries to be on a higher level. Garment workers, however, reported over 8 per cent more unemployment than in March, 1922. Workers in the building and construction trades and in the fishing, mining and transportation industries were more fully engaged. Retail clerks, however, were slightly less fully engaged.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES.

Month		Fishing	Lumbering and logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

The accompanying tabulations (Table III) show in some detail the returns for the month ending March 31, 1923, for which month returns were received from 1,404 labour organizations with an aggregate membership

of 149,000 persons, 10,185 of whom were out of work, a percentage of 6.8. The table also gives the general percentages of unemployment in the various trades and industries for January and February.

## REPORTS OF THE EMPLOYMENT SERVICE OF CANADA DURING THE PERIOD JANUARY-MARCH, 1923.

**A** REVIEW of employment during the first quarter of 1923, as indicated by the reports from the offices of the Employment Service of Canada, shows a decided expansion following the depression of the holiday and stock-taking season at the commencement of the New Year. This improvement is the

more marked in contrast with the first quarter of 1922, the gains in the number of positions offered through the Service being more than 26 per cent over last year, while placements effected showed an increase of approximately 29 per cent. The chart on page 530 which accompanies the article on the

work of the employment offices for the month of March, 1923, portrays the returns from the offices on the basis of daily averages over half-month periods from January, 1921, to date. A comparison of the quarterly period under review with the corresponding period of last year shows that during 1922 the low level of employment which is characteristic of the latter part of December, was maintained throughout January and February, increases first appearing during March, while in 1923 an abrupt rise in the curves of applications, vacancies and placements, occurred during the first half of January. This improvement over last year in the employment situation is reflected to some extent in the fact that the curves of vacancies and placements

remained firm throughout February and the early part of March, though a considerable percentage of the positions available were of a temporary and casual nature. A slight decline occurred during the latter part of March, marking the seasonal lull prior to the commencement of building operations and the opening of the spring drive in the logging industry. It will be noted that the spread between supply (applications registered) and demand (vacancies available) is not so large during 1923 in contrast with the wide gap marking the same periods of 1921 and 1922. And this, in addition to the fact that, although the curve of applications was marked by sharp fluctuations, approximately the same level was main-

tained as previously, with a slightly downward tendency.

During the period January-March, 1923, the offices reported that they had made 89,578 references to positions and effected a total of 85,075 placements, as compared with 66,070 placements during the same period in 1922. Placements in regular employment during the quarter under review numbered 42,557, of which 34,951 were of men and 7,606 of women, and those in casual work totalled 42,518. Employers notified the Service of 96,154 vacancies (72,410 for men and 23,744 for women), as compared with 76,226 during the same

period last year. The number of applications for work registered at the offices was 120,817, of which 95,308 were from men and 25,509 from women, as compared with a total of 121,722 during the period January-March, 1922.

The accompanying table gives the vacancies and placements by industries of the offices of the Employment Service of Canada in the various provinces during the period January-March, 1923. A report of the work of the offices for the month of March, 1923, will be found in the article that immediately follows.

---

### EMPLOYMENT OFFICE REPORTS FOR MARCH, 1923.

THERE was a diminution in the volume of business transacted through the offices of the Employment Service of Canada during the month of March, 1923, as compared with the number of transactions during the preceding month. In comparing the report with that of a year ago, it will be noted that during the period under review there were fewer applications for work, while vacancies offered and placements made were greater. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, shows that the downward trend of the curves of applications, vacancies and placements, was very marked during the latter half of the month, the reduction being due in part to a decline in the number of casual jobs offered. A summary of the reports from the offices shows that the average number of registrations for work was 1,572 daily during the first half of March, 1923, as compared with 1,588 daily during the previous period and with 1,668 daily during the same period a year ago. During the latter

half of the month applications averaged 1,337 daily, as compared with 1,462 during the same period in 1922. Opportunities for employment notified by employers to the Service averaged 1,311 and 1,138 daily during the first and second half of the month, respectively, as compared with 1,158 and 1,115 daily during the same period last year. The average number of vacancies reported daily during the latter half of February, 1923, was 1,290. The offices effected an average of 1,158 placements daily during the first half of March, as compared with an average of 1,136 daily during the previous period and with 979 during the same period a year ago. During the latter half of March placements averaged 969, as compared with 912 during the same period in 1922. The average number of placements in regular employment during the period was 555 and 599 daily, while placements in casual work averaged 603 and 370 daily during the first and second half of the month, respectively. The following table gives the placements effected to date by the offices of the Employment Service:

Year	Placements		
	Regular	Casual	Total
1919 (10 months)....	268,001	37,904	305,905
1920.....	366,547	79,264	445,811
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923 (3 months).....	42,557	42,518	85,075

During the month of March 28,979 persons were referred to positions, while a total of 27,641 placements were made. The placements in regular employment numbered 15,005, of which 12,283 were of men and 2,722 of women and placements in casual work totalled 12,636. Applications for work during the period numbered 37,820, of which 29,224 were from men and 8,596 from women workers. Employers notified the Service of 31,827 vacancies, 23,179 of which were for men and 8,648 for women.

Placements in regular employment by provinces were as follows: Nova Scotia—291 men, 85 women; New Brunswick—285 men, 73 women; Quebec—347 men, 418 women; Ontario—5,300 men, 785 women; Manitoba—1,501 men, 402 women; Saskatchewan—1,504 men, 368 women; Alberta—1,097 men, 353 women; British Columbia—1,958 men, 238 women.

#### MARITIME PROVINCES.

A few orders for farm workers for the spring ploughing were received at Halifax and New Glasgow. In the building and construction industries a number of small contracts were under way and several placements of carpenters and labourers for general clearance work were made at Halifax, New Glasgow, Chatham and Moncton. Experienced applicants for bush work were hard to secure owing to the advanced season but the offices anticipated little difficulty in filling the demands for rivermen when driving commenced. Miners and hand-pick men were required at Moncton and St. John. It was reported that the shipyards at Hali-

fax were busy and work for a few labourers was supplied. Calls for institutional help and trained household workers were received in large numbers.

#### QUEBEC.

Toward the latter part of March a small demand for farmers was reported, especially at Montreal and Quebec. No increase was noted in the building trades, the supply of carpenters and labourers being in excess of the demand. The offices reported that prospects were bright for improved employment during April and May.

#### ONTARIO.

An increasing demand for farm labourers was noted, chiefly at Belleville, Brantford, Hamilton, Guelph and Toronto, while in the northern sections of the province there were reported few vacancies. Owing to the continued cold weather, conditions in the building industry had not improved. Municipal and provincial works, such as the construction of sewers and roads, operated towards a reduction of the unemployment situation, but in some localities these projects were nearing completion. At Cobalt some labourers were placed digging post holes for the erection of transmission lines, while a number of bricklayers were sent from Ottawa for the completion of work at Sault Ste. Marie. The outlook is good for employment of unskilled and semi-skilled labourers on railway maintenance and construction, although during the past month little work has been offered in this group. The demand in the logging industry showed a decided slump, this being the seasonal lull prior to the river drive, when numbers of experienced workers will be required. At Cobalt vacancies for a few hoistmen, machine runners and steel sharpeners for the mines were received. A revival in demand was reported in the manufacturing industries, especially in the vicinity of Hamilton, Sarnia, St. Thomas and Windsor, where machinists, engineers and skilled mechanics were

required for the metal trades. At Kingston and Oshawa weavers and women workers for the knitting, woollen and rubber factories were in demand. The calls for domestic workers were numerous, and a slight gain was reported in the number of vacancies offered for institutional help.

#### MANITOBA.

A further slight increase in the demand for farm labour was reported from Dauphin, Portage la Prairie and Winnipeg, and was met satisfactorily in most cases. From the office at The Pas many workers were sent to farms in Saskatchewan. No immediate expansion was expected in the construction group, all outdoor industries being delayed on account of the cold weather. Apart from casual and temporary employment, shovelling snow and hauling gravel and sand, few vacancies were offered. The offices continued to receive orders for bush work but applicants were unwilling to accept this work owing to the lateness of the season. The demand was stationary in the women's division. Household workers for urban and rural districts

and institutional helpers were placed in considerable numbers.

#### SASKATCHEWAN.

The demand for agricultural help during March showed a marked increase at all the offices and, although in some localities experienced applicants were hard to secure, a large percentage of the orders were filled. The offices in British Columbia and Manitoba assisted to some extent in meeting the demand in this province. The construction group showed little progress although a number of men were placed on railway maintenance work at Moose Jaw, Prince Albert and Regina. Sawmills continued to employ a number of workers near Prince Albert and Saskatoon, while at Estevan a few miners and teamsters were placed at the mines. Additional orders for household workers were received and filled satisfactorily at many of the offices.

#### ALBERTA.

Improvement in the business transacted in the agricultural group tended to alleviate the unemployment situation

at a few centres. In the construction group some excavation and clearing work was under way and several labourers were placed on irrigation work. On the whole, however, few opportunities were available in these groups. From Edmonton several workers were placed in the sawmills, while at Lethbridge many miners were unemployed. The demand for domestic servants for city and country was far in excess of the supply.

#### BRITISH COLUMBIA.

The renewal of farm activities in the province was not so noticeable as on the Prairies, but several placements were effected in the Okanagan district and from Vancouver and Victoria a number of workers were sent to Alberta and Saskatchewan to assist with the spring seeding. There were no increases in the building and construction group, placements being confined mainly to unskilled labourers and a few carpenters on repair jobs. Road and railway construction afforded employment to a limited number. In the logging and allied lumber industries a brisk demand was felt, the requirements being mainly for experienced sawmillmen and tieworkers. Considerable development work was proceeding in metal mining, there being a continued shortage of experienced quartz machine miners. At Vancouver, Prince Rupert and other ports, numbers of men were employed as stevedores and longshore workers. There was an increased demand for domestic workers for permanent and casual employment with a shortage of experienced applicants.

#### The Movement of Labour

The offices of the Employment Service of Canada made 15,005 placements in regular employment, of which 8,987 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter, 1,760 were granted the Employment Service reduced transportation rate, 1,290 going to points within the same province as

the despatching office, and 470 to other provinces.

The office at Quebec City issued 17 certificates to bushmen and river men going to lumber camps within the province. Of the 566 transportation-certificates issued in Ontario, 335 were to bushmen going from Fort William, Port Arthur, Sudbury and North Bay, to points within these zones. Of the remainder, a number were issued to labourers for railway construction near Port Arthur, several to farm workers and mill hands. From Belleville one steel worker was transferred to Sault Ste. Marie, one miner from Timmins and several machinists and plasterers to St. Thomas, Guelph, Sault Ste. Marie, and other points. Workers despatched at the reduced rate by Manitoba offices numbered 612, of whom 250 were going to points within the province and 362 to other provinces. Of the transfers within the province, 227 were of farm workers and 23 were domestics for household work. From the office at Winnipeg 242 bushmen and camp workers were sent to points near Port Arthur, Ont., and 47 farm labourers were sent to points in Saskatchewan. From the other offices 65 workers were sent to farms in Saskatchewan, and 5 women travelled from Winnipeg to points in Saskatchewan and 3 to points in Ontario. The Saskatchewan offices issued 99 certificates, of which 3 were to tiemakers going from Saskatoon to Prince George, B.C., and one was a miner going to Vancouver, B.C. Of the provincial transfers, 57 were bushmen and sawmill men and the remainder were women workers going as housekeepers to farms in the province. The offices in Alberta despatched 274 workers at the reduced rate, 23 of whom were farmers going from Edmonton to North Battleford and Saskatoon. More than 70 of the provincial transfers were of farm labourers, approximately 150 were of bushmen, 9 were miners from Edmonton, and 3 were motor mechanics from Edmonton and Calgary, the remainder being housekeepers and domestic servants. British Columbia offices granted certificates to
